**CORN BORER NOW SPREADING WEST**

Fight to Protect Corn Belt From Advance of Pest to Be Concentrated in Ohio.

**PEST DOES HARM IN CANADA**

Farmers Urged to Cut Cornstalks Close to Ground as Possible to Destroy Winter Home of Insect—Fall Plowing Helps.

(Prepared by the United States Department of Agriculture.)

The fight to protect the corn belt against the advance of the European corn borer is now to be concentrated in Ohio, where, according to reports to the United States Department of Agriculture, infestations of the pest have been found along the entire southern shore of Lake Erie over a strip varying from six to twelve miles in width and extending to within six miles of the Indiana border. It is at the western end of the lake that the borer also threatens a descent upon this country from Canada by crossing the Detroit river. The department is preparing to reduce its efforts against the pest in other places and in co-operation with Canadian and Ohio authorities concentrate them in Ohio.

**Heavy Infestation in Ontario.**  
 For some months the Canadian authorities have been combating the pest on the northern shore of the lake, where it has gained a strong foothold, practically devastating entire cornfields in the vicinity of St. Thomas. A three-days heavy wind at the period when the moths were flying is believed to have blown some of them across the lake into Ohio.

Every possible effort, it is said, will be made to hold down the infestations on the Ohio and Pennsylvania side of the lake. Farmers will be urged to cut their cornstalks as close to the ground as possible, as the insect makes its winter home in the stalk. For this reason, too, fall plowing is recommended. The Ohio authorities, it is said, are fully alive to the need for checking the spread of the pest, and are co-operating with the department and conducting work of their own toward this end.

**Floating Cornstalks a Source of Danger**  
 This is the first instance known in which the corn borer was carried any great distance by wind. It has been known, though, to travel by water in floating cornstalks, and in this manner has made its way to islands. This is one ominous feature of the presence of the borer in Ohio, it is said. At present the infestations are in a strip that drains into Lake Erie, and floating stalks are not likely to do much harm. However the divide where the

The European Corn Borer. Top at left—larvae and pupae in cornstalks, and young tassel attacked by the insect. Male and female moths drawn on same scale as the corn. Top center—a female moth with cluster of eggs on a section of corn leaf, on a considerably larger scale. Top right—mature tassel showing typical injuries by caterpillar (the broken tassel stem is often the most noticeable evidence of the presence of the insect during the early summer months). Center—external and internal views of injuries inflicted on two ears of sweet corn. Lower half of the plate—snap beans, beets, and celery attacked by the borer, cornstalk containing caterpillars, corn stubbles cut away to show how the caterpillars hide themselves in the fall, winter, and early spring months, "smartweed," which is a favorite food at times, "barnyard grass," which in Massachusetts is often heavily infested, and "cocklebur" plant, a weed that often serves as a breeding place for the pest.

drainage of the Ohio river begins is only a few miles south of the infested area. Once over this watershed, it is said, there is no telling where the pest may be carried. It is thought altogether possible that infested stalks in that event might be carried even to places far down the Mississippi river.

The European corn borer has been known in this country only a few years. It is well known in northern Europe, where it does great damage to corn, especially in Austria. It is supposed to have come to this country and to Canada in importations of broom corn from Europe, and at present several large areas in New England and New York are under Federal quarantine to prevent its further spread. Its presence in Ohio is one of the most important developments since it entered this country.

**SUGGESTIONS TO AID FARM TIMBER OWNERS**

Selling of Product Calls for Good Business Methods.

Benefit by Experience of Neighbors and Investigate Local Requirements and Price—Advertise and Secure Competition.

(Prepared by the United States Department of Agriculture.)

Based upon methods used by woodland owners that have been successful in marketing their products, the forest service of the United States Department of Agriculture offers the following 10 suggestions for aiding others who have timber on the farm for sale:

Get prices for various wood products from as many sawmills and other wood-using plants as possible.

Before selling, consult neighbors who have sold timber and benefit from their experiences.

Investigate local timber requirements and prices. Your products

Black Locust Plantation—Five-Year-Old Trees.

may be worth more locally because transportation is saved.

Advertise in papers and otherwise secure outside competition.

Secure bids if practicable both by the lump and by log-scale measure.

Be sure that you are selling to responsible purchasers.

Get a reliable estimate of the amount and value of the material before selling.

Market the higher grades of timber and use the cheaper for farm purposes.

Remember that standing timber can wait over a period of low prices without rapid deterioration.

Use a written agreement in selling timber, especially if the cutting is done by the purchaser.

Additional details concerning the profitable marketing of woodland products are contained in Farmers' Bulletin 1117, Forestry and Farm Income, copies of which may be had upon request of the division of Publications, United States Department of Agriculture, Washington, D. C.

**GOOD PREVENTIVE OF VERMIN**

All Small Inclosures Should Be Cleaned and Disinfected Before Being Used.

Except in accidental cases, hog lice are found only on hogs, and they do not voluntarily leave their natural host, says the United States Department of Agriculture. When separated from the animal they live only two or three days. The lice pass readily from one hog to another when the animals come in close contact. Practically all cases of infestation occur from contact with lousy animals and not from infected premises. Under reasonably good sanitary conditions pens, corrals and premises which have contained lousy hogs are not a source of danger to hogs free from lice.

As a precautionary measure, however, and because it is good sanitary practice, all small inclosures which have contained lousy hogs should be cleaned and disinfected before being used for a new lot of hogs. The litter and manure should be removed and the floors cleaned after which the woodwork and floors should be sprayed with a good disinfectant. The coal-tar-cresote dips, diluted in accordance with instructions on the container, are suitable for this purpose.

**TAKE-ALL DISEASE OF WHEAT**

Department of Agriculture Has Found Thirty-Nine Varieties Immune to Ailment.

Efforts by the United States Department of Agriculture to combat the so-called take-all disease of wheat in Illinois and Indiana have resulted in finding 39 varieties that are either immune or highly resistant to the disease. They are Bejoglina, Crimean, Currell, Dietz, Longberry, Early May, Fulcaster, Fultz, Glips, Gladden, Gold Coin, Grandprize, Harvest King, Hungarian, Jones Five, Kanred, Kharkof, Leap, Malakof, Mammoth Red, Michigan Amber, Mediterranean, Minnesota Reliable, Nigger Pesterboden, Poole, Portage, Pride of Indiana, Red Cross (red chaff), Red Rock, Red Wave, Reliable, Rudy, Stoner (Marvelous), Trumbull, Turkey, and Wheedling.

**WEAK BLOOD IS A REAL BARRIER**

Growing Children Often Need Gude's Pepto-Mangan.

Some children grow too quickly—they sap their strength. They lapse into carelessness, desultory habits, or develop a shrinking attitude. Their faces look pinched.

The blood becomes overtaxed by too rapid growth; and poisons from the system take the place of strength-giving red corpuscles in the blood. Red corpuscles are those little red particles that swim in blood and give it its color. Gradually that child loses interest in its play.

Poor blood needs the building that the iron in Gude's Pepto-Mangan gives to weakened blood. Gude's Pepto-Mangan enriches the blood by increasing the number of red corpuscles, and restores the blood by driving out the poisons. When the revived blood gets to work, the appetite becomes what a growing child's should be. Your druggist has Gude's Pepto-Mangan in liquid or tablet form. The name "Gude's Pepto-Mangan" is on every package. Advertisement.

Everybody waits for those who come.

**Cured His Love Spasm.**  
 I was a "freshie" in high school and almost immediately upon entering, fell violently in love with my algebra teacher. I even stayed hours after school to "make up work" just so that I could be near her. One day I could withhold my sentiments no longer and I blurted out sentences and sentences of adoration all in one breath. She seemed not at all unnerved and after I had finished she merely thanked me profusely and said that I must come to visit her at home some time. She was positive I would like her husband and two little boys quite as much.—Chicago Journal.

**He Knew.**  
 A tenderfoot arrived in the wild lands where the real cowboys come from. He had been told to ask for a certain ranch foreman who would give him a job. He went up to a man in the first village he came to.  
 "Have you seen a tall fellow with a dark beard hanging around here?" he asked.  
 "Yes," said the man, "day before yesterday."  
 "You're sure?"  
 "Oh, yes. I had hold of the rope."

Some men know more than their wives and wisely keep it strictly to themselves.

Other people's troubles always bore us more than our own.

**DO YOUR TOES SPREAD OUT?**

Mary E. Bayley, R. N., Tells What, in an Expert's Opinion, the Feet Should Be Like.

Does the great toe of your foot (or the big toes of both feet) continue in a straight line from the heel? And do your other toes spread apart? If this condition exists you have good under-standing feet, according to Mary E. Bayley, R. N., who tells in the Delineator what feet should be like. Her article has been approved by Dr. Virgil P. Gibney, surgeon in chief of the Hospital for the Relief of the Ruptured and Crippled, New York, and therefore bears the stamp of authority.

Too much care cannot be taken of the feet, Miss Bayley continues, as they are the keystone to correct body position and have much to do with one's health. Particular attention should be paid to shoe fitting between the ages of nine and fourteen, since this is the period of growth and expansion. Stockings, too, come in for discussion, as tight-fitting ones compress the toes and interfere with the circulation.

**After Eden.**  
 Adam—"Now we shall have to live in a house." Eve—"Certainly; I'll need a roof to dry my hair on."

**Are you stepping on the brake or the accelerator?**

The food you eat does make a difference. Heavy, starchy foods often do slow down body and mind—often steal the energy that belongs to the day's work. Grape-Nuts is a go-ahead food. It contains the perfected nourishment of Nature's best grains. It includes all those elements needed to nourish body and brain. It is easy to digest. It gives energy without taking energy.

How about your breakfast or lunch—does it give, or take?

Grape-Nuts is sweet, crisp, delightful to the taste, and is an ideal source of power for a busy and difficult day.

"There's a Reason" for GRAPE-NUTS

**This little bit of advice may help you regain your Health, Strength and Vitality**

Thousands of people suffer from nervousness. They are run down and miserable without knowing the reason why.

They do not stop to think that much of their trouble may be caused by drinking tea and coffee which contain the drugs, thein and caffeine. When you over-stimulate the system for any period of time, the result may be nervousness with its many accompanying ills. You may fail to sleep properly and your sleep does not refresh you as it should.

Postum, made from scientifically roasted cereals, will help you to overcome all these conditions. For it contains only healthful substances, instead of drugs, as are found in tea and coffee.

Postum helps build sound nerve structure, by letting you get sound, restful sleep.

In flavor, Postum is much like high-grade coffee. In fact there are many people who prefer Postum for its savory flavor alone.

Order Postum from your grocer today. Serve this rich, fragrant beverage for the family. See how the children will like it, and how much better everybody will sleep at night.

Postum comes in two forms: Instant Postum (in tins) made instantly in the cup by the addition of boiling water. Postum Cereal (in packages of larger bulk, for those who prefer to make the drink while the meal is being prepared) made by boiling for 20 minutes.

**Postum for Health**
