If a really good reason can be given for holding Thanksgiving services the day before the day set by proclamation, the Reporter would like to have it. Of course, it is admitted that we can and should give thanks always, but why not especially on Thanksgiving Day?

November weather has been delightful in a general way. There has been a liberal amount of sunshine and no freezing worth the while speaking of. A lot of fine weather in December will help make the winter much shorter and agreeable. Let us hope we will have a December to be recalled as one having a lot of sunshine.

Just keep in mind that the U. S. mail is growing every day from now on until Christmas and that if you want certain delivery do not wait to mail your letters until a minute before or just the minute the mail departs. Conditions are such at times that to add a single letter several packages of letters must be worked over.

More than 5,700 persons during October visited the new steel forest fire observation towers that have been erected by the Pennsylvania Department of Forestry in various parts of the state. An effort is being made to induce patrons of the mail to eliminate undersized envelopes and cards, especially during the holiday season. There are many reasons why the undersized stationery should not be used, and the principal one is that the missive is likely to be delayed in transportation. This class of mail is especially annoying to railway clerks. Of course, there is nothing to prevent you, but good common sense, to use the smallest envelope to be found on the market.

Gulf Coast Sulphur Deposits.
At some remote time there must have been tremendous volcanic activity in the region which is today the gulf coast of Louisiana and Texas; for in those parts are found deposits of sulphur vastly exceeding in quantity any known elsewhere in the world. They are covered over by hundreds of feet of later sedimentary material, and to get at the sulphur deep wells have to be sunk. Superheated water is

forced down the pipes to melt the sulphur, which is fetched to the surface by the power of compressed air. On cooling it is ready for shipment, being 99 per cent pure.

English and American Speech.
It is said that it is harder for a Lancashire farmer to understand a Lancashire miner than it is for any two Americans from different sections of the United States to understand

each other. The reasons advanced for the uniform standard in America are the wide use of text-books, and the fact that our public schools are forced to devote much time to the teaching of English on account of the large number of foreigners in the schools. There are many provincialisms in our language, but most of them have been scattered over the whole country and are understood by all—Exchange.
