

THERE IS VIGOR IN RICH BLOOD

Pepto-Mangan in Liquid or Tablets—a Blood Builder.

Vigor and strength have as their base rich red blood. Blood is rich when there are plenty of red corpuscles. They are the tiny red cells which swim in blood and give it its color. Without red corpuscles blood would be white. When overworked, or straining, or illness weakens the blood, it diminishes the number of red cells. Without a sufficient number of red cells the blood becomes watery, the body weak. Vigor and strength fall off, so that physical life diminishes like a fading plant. The physical pleasures of eating and sleeping and exercise lose all attraction. There is no zest in living.

After Gude's Pepto-Mangan has been taken for a while the blood becomes rich with red cells. They help to nourish the entire system. With good blood at work there is a great difference in living. Eating, sleeping and exercise are enjoyed. All druggists sell Gude's Pepto-Mangan. Advertisement.

If the doctor is sick he has one great satisfaction: he knows exactly what is the matter with him.

ANOTHER WOMAN ESCAPES

Mrs. McCumber Avoided a Serious Operation by Taking Lydia E. Pinkham's Vegetable Compound in Time

Georgetown, Ill.—"After my first baby was born I suffered so with my left side that I could not walk across the floor unless I was all humped over, holding to my side. I doctored with several doctors but found no relief and they said I would have to have an operation. My mother insisted on my taking Lydia E. Pinkham's Vegetable Compound and I soon found relief. Now I can do all my own work and it is the Vegetable Compound that has saved me from an operation. I cannot praise your medicine too highly and I tell all of my friends and neighbors what the Compound did for me."

—Mrs. MARGARET MCCUMBER, 27 S. Frazier St., Georgetown, Illinois.

Mrs. McCumber is one of the unnumbered thousands of housewives who struggle to keep about their daily tasks, while suffering from ailments peculiar to women with backache, sideaches, headaches, bearing-down pains and nervousness, and if every such woman should profit by her experience and give Lydia E. Pinkham's Vegetable Compound a trial they would get well.

Vaseline Carbollated

Women Made Young

Bright eyes, a clear skin and a body full of youth and health may be yours if you will keep your system in order by regularly taking

GOLD MEDAL HARLEM OIL CAPSULES

The world's standard remedy for kidney, liver, bladder and uric acid troubles, the enemies of life and looks. In use since 1896. All druggists, three sizes.

Look for the name Gold Medal on every box and accept no imitation.

RATS and MICE MUST BE KILLED

By Using the Genuine **STEARNS' ELECTRIC PASTE**
Ready for Use—Better Than Traps
Directions in 15 languages in every box.
Rats, Mice, Cockroaches, Ants and Waterbugs destroy food and property and are carriers of disease. Stearns' Electric Paste forces these pests to run from the building for water and fresh air. See and Buy. "Money back if it fails."
U. S. Government buys it.

HENS THAT DO NOT MOLT UNTIL LATE ARE BEST EGG PRODUCERS

The Best Layers of the Flock and Those That Should Be Kept for Breeders Do Not Molt Until November.

(Prepared by the United States Department of Agriculture.)

Hens that devote too much attention early in the season to the fall styles in feathers are not the kind that please the flock owner. It costs too much to support them and they demand too long a vacation period. But the hen that wears her old clothes until autumn has almost passed is the best of the flock, for she has kept on laying since the previous fall or winter. So now when you see a bird that looks shabbier than the others, do not conclude that she is of the no-account kind and that her smartly dressed sisters are the ones to keep.

Take Short Vacation.

Of course some of the hens that molted earlier, say in August and September, are profitable enough to keep, but the cream of the flock is made up of hens that do not change their feathers until October or November. Their molting will require only a few weeks and they will probably be laying again by the 1st of January. The poor ones, the early-molting loafers, will not begin until about this time, even though they have been resting since the middle of the summer. It takes one about two months and the other twice that long to get back into production.

The poultry keeper who has an eye for business will not neglect this work-looking late layer, for she is the best profit maker he has. She needs a highly nutritious ration if she is to be in the best condition to start on another year of high production. When she quits laying and starts to molt she has as much need for a ration strong in protein as she has when she is shelling out the eggs, as feathers are highly nitrogenous in their makeup. They use the materials supplied by beef scrap, gluten feed, and oil meal. The oil meal is very effective in keeping the feathers in a healthy condition.

Hens that lay eggs late in the fall and in the winter are really producing an out-of-season crop, for it is normal for the hen to lay for a time in the spring and early summer and rest for the remainder of the year. Profitable hens are really those that have the capacity to force their egg-making machinery, but they must have the right sort of feed with which to do it. That means feeding well-balanced rations designed for the particular class, and sometimes for the particular breed. A balanced ration is a combination of feeds which furnish just the necessary amount of nutrients to produce the highest and most economical egg yields. The amount of feed needed to produce a dozen eggs varies with the kind of birds. According to experiments conducted by the United States Department of Agriculture general-purpose pullets produced a dozen eggs from 6.7 pounds of feed, and Leghorn pullets laid the same number from 4.8 pounds.

Simple mixtures are usually the most desirable. As the fall advances and the days grow shorter the birds should be encouraged to put away as much feed as possible during the day so that their bodies will have plenty to work on for all of the 24 hours. A good handful of scratch grain for each bird at night will fill the crop. It is not desirable that the hens be made to work very hard for this feed. Be sure that the hens go to roost with a full crop.

In making up rations it is necessary to adhere to standards within certain limits, but some feeds may be substituted for others, as barley, wheat, and oats for corn. However, meat scrap and other animal-protein feeds can not be replaced by high-vegetable-protein feeds. All changes should be made gradually, as sudden changes may decrease egg production.

A great many poultrymen and livestock feeders now believe that if the animal has a free choice it will select the ration that is most suitable. At the government farm at Beltsville, Md., the following mash was made up by keeping account of the amounts of the different feeds a laying flock consumed:

Samples of Balanced Rations.	
Mash.	Scratch Mixture.
3 1/2 lbs. corn meal	1 lb. cracked corn
6 1/2 lbs. meat scrap	1 lb. wheat
1 lb. bran	1 lb. oats
1 lb. middlings	1 lb. barley

Here is a simple ration that has given very good results with Leghorns, but that has proved too fattening for Rocks and Wyandottes. Meat scrap, it will be seen, makes up over 25 per cent of the mash.

For birds that are made too fat by the preceding ration, the following, containing only 16 per cent of meat scrap but having considerable pro-

tein in other feeds, has been found a good one.

Mash.	Scratch Mixture.
1 lb. corn meal	2 lbs. cracked corn
1 lb. bran	1 lb. wheat
1 lb. meat scrap	1 lb. oats
1 lb. middlings	1 lb. barley
1 lb. ground oats	

Poultrymen resort to every possible means to get their hens to eat a great deal of feed, especially in the winter when the days are short. One way is to cut the morning scratch feed to about half. The hungry bird then goes to the mash trough and gorges on the dry mash. Then to increase the consumption of mash some of it is fed wet at noon and the hens will eat it when they would take no more of it dry.

DARKENED CELLAR IS URGED FOR POTATOES

Exposure to Light Quickly Injures Quality of Tuber.

Temperature Best Suited for Proper Preservation is One Ranging From 32 to 45 Degrees—Large Piles Are Not Favored.

The object of storing any product is to preserve its quality during as long a period as may be necessary or possible in order to permit its disposal at the most advantageous time. Investigations by the bureau of plant industry, United States Department of Agriculture, show that the temperature best suited to the proper preservation of potatoes is one ranging from 32 to 45 degrees. In regions where the powdery dry rot occurs a temperature of 33 to 36 degrees holds the disease in check better than a higher one.

It is found best not to store potatoes in large piles when they are moist or covered with moist earth, as they quickly develop sufficient heat to injure the vitality of the tubers. If through unfavorable weather conditions it becomes necessary to store potatoes when they are wet and dirty, they should be spread out in a thin layer until they have become dry, after which they may be piled up. It is not desirable to store potatoes to a greater depth than six feet.

Potatoes intended for table use should always be stored in a darkened cellar or storage house. Exposure to light quickly injures the quality of the potato for food purposes.

SMALL HOUSE FOR CHICKENS

New Lumber Will Make Best Appearance, but Packing Boxes Will Answer Purpose Well.

In building a poultry house, new lumber will of course make the best appearing structure and will also be somewhat easier to work up because it can be bought in lengths most advantageous for the purpose. Houses for a few hens can sometimes be constructed from packing boxes, while used material or second-hand lumber, if it can be purchased cheaply and is close at hand, will sometimes lower the cost of the house materially.

Occasionally, also, where a high board fence is available, the house can be built in the corner of the fence, thus saving the construction of the back and one side of the house. Care must be used to cover or batten the cracks, either by means of strips or by the use of roofing paper. Construct the building so that the front of your henhouse will admit the sunlight.

Send to the Division of Publications, United States Department of Agriculture, for bulletins containing plan and illustrations; Farmer's Bulletin 889 is a good one to have on hand.

CEMENT FLOOR FOR FEEDING

Farmer Should Remember to Give Slope to One Side to Insure Necessary Drainage.

Farmers who build cement feeding floors should remember to give the floor a good slope to one side. This insures good drainage, facilitates cleaning and makes it possible for the feeding floor to completely fulfill its function of providing a clean place to feed hogs. Some farmers have so located these floors as to get a large amount of rainwater from roofs of nearby buildings, which flushes the floor after each rainstorm and helps materially to keep them clean and sanitary.

HER IDEAL LOVE

English Woman Describes Hero of Her Dreams.

Among Other Preferences, She Thinks More of Pipe Smoker Than of "Cigarette Dangler."

Anna Blount, an English woman, has a good deal to say on a question much discussed among women, "The Man I Could Love." Miss Blount's views are interesting, especially her admissions that she loves a dream hero, who smokes a pipe and who reads her like a book, according to the London Mail. Moreover, she says she doesn't flatter herself that her hero husband would always find her the most absorbing interest in his life. She writes:

"I do not pretend that I deserve entirely to find my ideal husband. But one can dream—and wait.

"I have pictured him often. He is about thirty years old, neither tall nor short, and clean shaven. His features are of the Roman type and he has dark gray eyes that look straight into mine with a compelling gaze. There is an interrogative wrinkle between his eyes that shows he has asked questions of life.

"I attach importance to his hands. They are straight and capable and the finger tips are not pointed.

"He is fond of art, but not 'arty.' He does not grow long hair, wear a Byronic collar and a flowing tie. He is rather fastidious about his clothes, without being a dandy. I think he looks his best in boating flannels, but I like him in evening dress.

"He is rather versatile and has fads and hobbies. This is fortunate, because I don't flatter myself that he will always find me the most absorbing interest in life. He smokes a pipe, and I am glad because I have a theory that pipe smokers are more reliable than cigarette dangles.

"My dream lover has a melodious but manly voice. He is not an incessant talker, but always a good listener. His sense of humor is keen, though he is not a constant joker nor a perpetual raconteur.

"Sometimes, like all sympathetic people, he is a little sad. I am not an admirer of the always equable man. Often such men are simply callous and thick-skinned.

"My ideal man is sensitive, but he knows it, and does not allow his sensitivity to make him touchy."

"His temper is rather quick. He 'explodes' now and again, but is very sweet and serene after the storm.

"I know that I shall vex him sometimes with my moods and whims, and probably he will want to shake me like a naughty child. I cannot tell why, but I am able always to put myself in his place and feel as he feels. I can often divine what he is thinking about and he can read me like a book.

"He is a delightful chum as well as a husband. He wants me with him in his work and play, and he asks my advice on most matters. I don't grudge him an evening at his club; but when he golfs or potters about in the garden I wish to be at his side.

"He is very firm, and can be stern, but he is also extremely considerate, tender and, best of all, he understands women by instinct and reflection.

"He is neither poor nor rich. He believes in enjoying the present hour and hates parsimony. His work interests him. He is as fond of play as a schoolboy. He is very tolerant of other folks' faults and weaknesses, generous with money and anxious to do 'good turns' for his friends. He respects women and loves children."

The Post-War Spirit.

Senator Kenyon was discussing, at a reception at Fort Dodge, his amendment empowering the President to veto single items in appropriation bills.

"My amendment," he said, "I believe would do away with a good deal of exploitation. There is too much exploitation, especially too much post-war exploitation. That war! What greed it has unchained!

"I heard of a millionaire the other day who said he'd be happy if he could achieve his one ambition namely, to buy at pre-war and sell at post-war prices.

"Another millionaire, a railroad man, said fiercely at a board meeting: 'The mismanagement is something fearful. I have traveled on several of our trains lately, and every passenger had a seat.'—Detroit Free Press.

And She Did.

Martha Ann, half past two, and Junior, on the shady side of one, were riding in the front seat of an automobile with Martha Ann's mamma.

Parental chastisement brought tears to Martha Ann's eyes and then she began to cry. Junior, a visitor for the day, thought he had to follow suit and began to snifle.

Quick as a flash, Martha Ann pushed her hand against Junior's face and in an excited voice said: "Keep still, Junior, I want to cry."

Stupid.

He had received the caress he so ardently desired, and, tremulous with triumph, he inquired:

"Am I the first man you ever kissed?"

"Of course you are," the damsel replied. "How stupid men are! I never knew one who didn't ask me that!"

Never say "Aspirin" without saying "Bayer."

WARNING! Unless you see name "Bayer" on tablets, you are not getting genuine Aspirin prescribed by physicians over 21 years and proved safe by millions for

- Colds
- Toothache
- Earache
- Headache
- Neuralgia
- Lumbago
- Rheumatism
- Neuritis
- Pain, Pain

Accept only "Bayer" package which contains proper directions.

Handy tin boxes of 12 tablets—Bottles of 24 and 100—All druggists. Aspirin is the trade mark of Bayer Manufacture of Monosaccharide of Salicylic Acid

Canada's Fur Farms.

The growing importance of fur farming in Canada is illustrated in the Dominion bureau of statistics report covering the industry for 1920. At the end of the year there were 532 fur farms in Canada, as against 414 in 1919, and the values had increased from \$3,968,591 to \$4,632,695 last year. Fur farms now exist in every part of the Dominion, and there are 14 ranches of domesticated animals in the Yukon territory.

BOSCHEE'S SYRUP

Alleviates Irritation, Soothes and Heals Throat and Lung Inflammation.

The almost constant irritation of a cough keeps the delicate mucous membrane of the throat and lungs in a congested condition, which Boschee's Syrup gently and quickly soothes and heals. For this reason it has been a favorite household remedy for colds, coughs, bronchitis and especially for lung troubles in millions of homes all over the world for the last fifty-five years, enabling the patient to obtain a good night's rest, free from coughing, with easy expectation in the morning. You can buy Boschee's Syrup wherever medicines are sold.—Advertisement.

Relieved.

Irate Creditor—Now, look here. I want my money.

Cheeky Debtor—Oh, that's all right. I thought you wanted mine.—Boston Transcript.

After all, it depends upon who the man or woman is whether the woman is the man's equal, or not.

Salt Your Stock the Blackman Way

DO YOU TAKE SALT with meals, or just fill up on salt once or TWICE A WEEK?

A few licks of BLACKMAN'S Tonic Salt should be a part of the daily diet of your live stock. It is medicated and will improve digestion, make the feed go further, and keep them in healthy condition. So simple, so easy. Just drop brick in feed-box—it will do the rest.

The Blackman Stock Remedy Co., Chattanooga, Tenn.

Western Canada Offers Health and Wealth

and has brought contentment and happiness to thousands of home seekers and their families who have settled on her FREE homesteads or bought land at attractive prices. They have established their own homes and secured prosperity and independence. In the great grain-growing sections of the prairie provinces there is still to be had on easy terms Fertile Land at \$15 to \$30 an Acre—land similar to that which through many years has yielded from 20 to 45 bushels of wheat to the acre—oats, barley and flax also in great abundance, while raising horses, cattle, sheep and hogs is equally profitable. Hundreds of farmers in Western Canada have raised crops in a single season worth more than the whole cost of their land. Healthful climate, good neighbors, churches, schools, rural telephone, excellent markets and shipping facilities. The climate and soil offer inducements for almost every branch of agriculture. The advantages for

Dairying, Mixed Farming and Stock Raising make a tremendous appeal to industrious settlers wishing to improve their circumstances. For illustrated literature, maps, description of farm opportunities in Manitoba, Saskatchewan, Alberta and British Columbia, reduced railway rates, etc., write
