PROGRESS OF AUTOMOBILE TIRE INDUSTRY SINCE 1910 IS SHOWN

While most commodities used by man have advanced in cost during the past decade, automobile tires are a notable exception.

Figures just compiled bring out the significant fact that tire prices have a steady downward trend since the year 1910, with only a comparatively small increase during the war and after-war days.

Tires of standard make can now be bought at lower prices than before the war, and indeed lower than at any time since 1910.

And this has been done without sacrifice of quality, for every tire user knows that he is getting twice the average mileage from his tires that he was getting a few years ago.

This unusual result has been accomplished through the tremendously increased demand and use, which permitted quantity production, and in larger part by means of the successive improvements in manufacturing processes, which brought quality up and costs down.

Chart Tells Story.
The accompanying chart tells a striking story of the progress since 1910 of an industry whose products approach the billion dollar mark in total annual figures.

Studying the chart in detail, it will be noted that starting with 1910, the general range of commodities in the United States ran about uniform up until 1915, while cotton and rubber, the two chief materials used in the production of tires, had a general downward trend.

Corresponding to this, the price of the finished tires similarly moved downward until in January, 1915, they reached the lowest point they had ever reached, a point not again to be touched until the price reductions that took place this winter.

At this time, 1915, tires were about 58 per cent lower than in 1910.

Crude rubber prices turned upward in the spring of 1915 and the next year saw long staple cotton start on its spectacular career, mounting higher and higher, passing well former levels ever dreamed of and reaching in the summer of 1920 a figure 287 per cent higher than in 1910.

At about the same time labor costs began to rise very sharply all over the country, affecting every industry that employed men. With raw materials and labor costs both increasing, the

period from 1915 to the summer of 1920 saw the general range of commodities in the United States climbing on and up until at the peak of 1920, they were over 160 per cent higher than in 1910.

In the rubber industry this increase in the cost of materials and labor was necessarily reflected in the cost of tires. The downward trend in price which had previously marked the industry up to 1916 was replaced by a period of rising prices. From the spring of 1918 until the fall of 1920 tire figures reached a point where they were within 30 per cent of the 1910 level.

End of Increased Costs.
The fall of 1920, however, saw the end of the period of increased costs in nearly every raw material and finished product used by consumers. Long staple cotton came down as sharply as it had risen, though it did not get back to its old low levels, and at the beginning of 1922 is still about 55 per cent higher than in 1910.

In this it differs just a little higher than the general price average of all commodities in the country, as compiled by the United States Department of Labor.

Labor costs, too, had come down part of the way, but still, in this industry, stand more than 100 per cent over the 1910 level.

Crude rubber, which represents less than 25 per cent of the manufacturing cost of tires, fabric and labor being the big items, has been moving gradually downward since 1916 and though now on the upgrade, is still 80 per cent below 1910. Its price broke sharply, too, in the fall of 1920.

Cost of Tires Fell.
The cost of finished tires came down immediately in the fall of 1920 in line with the lowered cost of materials and labor, despite the fact that there were large accumulations of stock, both raw materials and finished products, to be absorbed. So today we find a situation where tires are 60 per cent lower than in 1910.

In other words, tires have not only gone below the pre-war levels, but are lower now than they have ever been in the history of this industry.

And this result, in an industry, such as the tire industry, which makes up over a billion dollars' worth of finished goods a year, is a story of tremendous economic significance.

MOTORISTS LOSE GALLONS OF GAS

Inefficient Working of Automobile Engine Is Cause of Leakage of Costly Fuel.

FAULTY COMPRESSION BLAMED

Disarranged Motor May Appear to Run Fairly Well, but Trouble Occurs When Car Is Being Run at Moderately Low Speed.

Thousands of gallons of gasoline are wasted every day by motorists because of the inefficient operation of their engines.

An important detail to watch to keep the engine running efficiently is the compression. A motor with faulty compression may appear to run fairly well when driving the car at a reasonable speed or when it is working hard. Lost compression shows up when the car is being driven at a comparatively low speed.

How to Tell It.

Under either of these conditions the engine will run with an irregularity that makes the car jerk or jump instead of running steadily, as it should. This indicates that there is considerable loss of power and that much more gasoline has to be burned than when the engine is developing its full power.

In fact, gasoline mileage may be cut nearly in half through compression

loss and still the engine may continue to run fairly well, according to the ideas of an amateur driver.

Try the Crank.

If an engine is not running well and a compression loss is suspected, the simplest way to detect it is to use the crank and turn the engine over by hand, and thus feel the compression on each individual cylinder. You will nearly always find that some pistons will go over compression much easier than others, and this means that somewhere there is a leak in this cylinder.

The number of miles which a car should run without having the valves reground varies greatly, depending on oiling and other engine conditions.

With the average car under normal running conditions, however, it is probably wise to have the valves ground at least once every 5,000 to 10,000 miles, depending on the operating condition of the motor.

AUTOMOBILE GOSSIP

Deflating an inner tube is a slow business when this means holding open the valve. Try using a goose quill which has been cut in the form of a pen.

Mud, wet or dry, should be removed with flowing water from a squeezed sponge, or flowing from a hose with very little pressure, never with a water blast.

Insurance companies in New York, in the future, will pay rewards only for the arrest and conviction of thieves of automobiles, instead of offering rewards for the return of stolen cars.

Taste is a matter of tobacco quality

We state it as our honest belief that the tobaccos used in Chesterfield are of finer quality (and hence of better taste) than in any other cigarette at the price.

GOT BACK AT "BR'ER SIMCOX"

Fool Question Met Merited Rebuke From Colored Preacher—Surely Right on One Point.

Bishop Candler, of Atlanta, was condemning a certain theological controversy.

"Such idle controversies," he said, "remind me of the colored preacher who began a sermon with the words:

"Brethren and sisters, when de fust man, Adam, was created, he was made outer wet clay and set up agin de pallin's to dry."

"A member rose in the back of the church.

"Pawson," he said, incredulously, "does yo ser'ously state dat Adam was made outer wet clay and set up agin de pallin's to dry?"

"Dem's mah words, Br'er Simcox, Dem's mah words!"

"Br'er Simcox, set de down," said the parson severely. "Such fool questions as yours would upset any system of theology."

Overtaken.

Welsher—I hear young Scads-worthy is going to marry Miss Manchester. He ought to look before he leaps.

Olson—He did. He took a glance over his shoulder and saw she was rapidly closing in on him. Then it was too late to leap.

LOOK—New Invention 50 Egg Hen Hatching Incubator. Setting hen produces the necessary heat, automatically becomes a brooder when eggs are hatched; guaranteed to hatch every hatchable egg. You can make one in a few hours spare time; material costs less than \$1. Send \$1.25 for drawings and specifications. Money refunded if not satisfactory. **John Frazer**, Box 670, Rochester, N.Y.

Ever hear of an investment where you couldn't lose and were absolutely certain to more than double your money? Oregon timber at 75¢ per thousand ft. is it. Increasing demand with limited supply means a timber famine soon. Southern lumbermen invested \$10,000,000 in Oregon last yr. Why? **C. ELLIOTT**, 256 12th, PORTLAND, ORE.

Prehistoric Ruins.

The fascinating interest of the ancient ruins in Rhodesia, South Africa, drew the attention of the archeologists of the British association during its recent meetings at Cape Town. Among these ruins the most conspicuous is the great Zimabwe temple, which lies about 200 miles inland from the Indian ocean. The oldest of the ruined buildings are believed to date back at least to the days of King Solomon. It is thought that they were constructed by Semitic colonists, whose chief object was gold mining, and who have left indications of their worship of Baal and Ashtaroth, as described in the Bible. Experts believe that precious metals to the value of \$3,000,000 or \$4,000,000 must have been extracted from the gold reefs of Rhodesia in ancient times.

Sunday at the Zoo.

It was Sunday at the zoo. "What's the trouble with the fellows?" inquired the orange-ouang. "Most of them look as if they'd seen a ghost."

"It's this economy stunt," explained the monkey. "They've decided to transfer the keeper of the elephants to the insect house, and they don't know how to break the news to him."

Outside Influence.

Rub—"What do you think of short skirts?" Dub—"Well, it doesn't depend upon the skirts."

WHY THE NAME 'MOONSHINE'?

In Earlier Years the Illicit Liquor Was Supposed to Be Made Only at Night.

America calls the liquor illicitly distilled, especially in the Alleghany mountains, "moonshine." The apparent reason is that it is believed to be distilled at night and secretly transported without payment of a tax or the authority of official permit. The fact is, of course, that the secret stills work as hard in day as at night.

England used the word in smaller manner, though not in the same sense. Over there moonshine is liquor that has been smuggled into the country without payment of a tax. The smuggling is usually done by small boats from the continent, that land at lonely shores at night, and the cargo is unloaded by the light of the moon. It was this that gave the liquor its generic name.

American moonshine is raw, unaged and often uncolored spirits. British moonshine may be the finest brandy from France, the choicest rum from Jamaica. In the British Isles, especially Ireland, the popular name for home-distilled spirits is "mountain dew," because it is in the hills that it is made, far from the prying eyes of the excise man.

The mule is very apt to be behind with his business affairs.

Did you ever try Grape-Nuts? with stewed prunes or peaches?

THERE isn't anything better for breakfast or lunch than a dish of Grape-Nuts, with cream or milk, and stewed prunes or peaches.

This delicious combination gives you the elements of a well-balanced food. For it contains not only the material needed to build tissue and furnish energy, but it also supplies fruit acids, that help keep the system in good order.

Go to your grocer today and order a package of delicious Grape-Nuts. You will find that it will digest more readily than most other cereals, and it will "stay by" you longer—because it's so richly nourishing.

Grape-Nuts for Health "There's a Reason"
