FARMERS ARE WORKING HARDER

And using their feet more than ever before. For all these workers the frequent use of Allen's Foot-Ease, the antiseptic, healing powder to be shaken into the shoes and sprinkled in the foot-bath, increases their efficiency and insures needed physical comfort. Allen's Foot-Ease takes the Friction from the Shoe, keeps the shoe from rubbing and the stockings from wearing, freshens the feet, and prevents tired, aching and blistered feet. Women everywhere are constant users of Allen's Foot-Ease. Don't get foot sore, get Allen's Foot-Ease.

More than One Million five hundred thousand pounds of Powder for the Feet were used by our Army and Navy during the war. In a pinch, use Allen's Foot-Ease.

Glenn's Sulphur Soap

Contains 33 1/2% Pure Sulphur (At Druggists)

Sulphur is an effective remedy for skin troubles. Chronic eczema, acne, and various scaly eruptions are greatly benefited by Glenn's, which cleanses, disinfects, whitens and beautifies the skin. Millions find it delightful.

NEW LIVE STOCK REPORT SERVICE

Plans Being Made to Give Monthly Changes in Situation on Farms of Country.

ALL DETAILS WILL BE GIVEN

Careful Study Being Made of Possible Methods for Gathering and Distributing Information to Those Interested.

(Prepared by the United States Department of Agriculture.)

Plans for a nation-wide live stock reporting service showing the monthly changes in the live stock situation on farms are now being made by the United States Department of Agriculture, under the \$70,000 congressional appropriation recently made for this work. The service will also include the forecasting and reporting of the important live stock movements.

Make-Up of Reports.

At recent conferences of statisticians and crop and live stock estimating ex-

A Man May Feel Independent if He Possesses a Nice Bunch of Cattle.

perts it was felt that the monthly reports of changes on the farm should include reports of births, deaths, losses, marketings, purchases, and animals bred, with periodical classifications of the numbers of animals on farms. This service will be an expansion of experimental work carried on by the division of crop and live stock estimates during the last three or four years. Monthly reports will be obtained from 70,000 to 100,000 farms, and state indexes of changes at least for the corn belt, and eastern and southern states will be developed. The range states on cattle and sheep will be covered by a series of semi-annual reports because of the difficulty of getting monthly reports from those states.

Information to Be Given.

The forecasting and reporting of the important live stock movements will be based upon the movement of feeder cattle and lambs from the range states to the corn belt feed lots, the movement from the feed lots to market, the movement into the eastern feed lots such as Lancaster, Pa., and the movement out, the forecasting and estimating of the yearly lamb and calf crop of the range states, and estimates of the feeder hog movement in the Middle West. A careful study is now being made of possible methods for gathering and reporting this information.

At conferences held to develop a live stock reporting program, representatives of farmers' organizations, co-operative live stock shipping associations, the packing establishments, and other live stock interests were present. Many large live stock producers' associations in the West have also indicated a desire to co-operate.

COUNTY AGENTS AID FARMER

Specialists in Many States Now Devote Full Time to Management Extension Work.

Twenty-four northern and western states now have 30 specialists to devote full time to farm management extension work. County agents in 895 counties report that they distributed 51,083 farm account books in 1921; 519 counties reported 18,448 books kept, and 444 reported that 8,454 farmers were assisted in summarizing their accounts. County agents in 237 counties report that 2,972 farmers made changes in their business as a result of keeping accounts. More than 800 farm-account schools, with an attendance of 20,000, were held in 1921, the United States Department of Agriculture reports.

SKUNKS WORRY BEEKEEPERS

Odoriferous Little Animals Coax Honey Gatherers Out at Night and Eat Them.

A report from Ohio received by the biological survey of the United States Department of Agriculture says that skunks are giving a great deal of trouble to beekeepers in that region. The skunks visit the hives at night and scratch on the outside till the bees come out. As soon as they appear the skunks eat them. The biological survey recommends that under such conditions the hives be fenced in with chicken wire at least three feet high.

PREVENT OUTBREAKS OF INJURIOUS PEST

Control Webworms in Corn by Cultural Methods.

After Crop Is Once Planted and Field Is Found to Be Infested There Is No Practicable Way of Getting Rid of Them.

(Prepared by the United States Department of Agriculture.)

Outbreaks of webworms in corn in the Middle Eastern states can be prevented only by cultural methods, according to the bureau of entomology of the United States Department of Agriculture. Unlike most of our destructive pests, the various species of webworms are all natives of America and have not been introduced from foreign lands.

Summer or very early fall plowing should be practiced. Plowing in late October or November has little effect because the worms are already in their winter webs under the surface of the ground. Land that has been in sod or pasture, or lain fallow and grown up to weeds and grass should be plowed in July or August, if it is intended to plant it to corn the following spring.

Grasslands of all kinds—meadows, pastures, or lawns—furnish the normal food of sod webworms, but they also gnaw young corn plants below the surface and deform them so as to prevent the production of grain. After the corn is once planted and the field is found to be infested there is no practicable method of getting rid of the worms; the only thing that can be done is to produce conditions that will permit the corn to grow in spite of them.

Disking in the spring, the application of fertilizer, and the sowing of sound seed are the chief preventive measures that will have any effect. Neither poisoning nor trapping has met with any success.

KEEP WEEDS OUT OF GARDEN

With Few Pieces of Flat Iron and an Old Wheel an Efficient Tool Can Be Made.

From a few pieces of flat iron, such as old buggy tires, and a wheel that can be taken from an old wheelbarrow or truck, it is possible to make an efficient weeder for keeping the home garden free from weeds.

The device is constructed, as indicated by the drawing, with a blade, parallel with the ground, which is pushed along just underneath the surface, cutting the roots of weeds and other plants outside the rows. Not

A Homemade Garden Weeder That Not Only Keeps Down the Weeds but Serves as a Cultivator to Break Up the Hard Crust Between the Rows.

only will this instrument keep down the weeds, but it also acts as a cultivator by breaking up the hard crust between the rows and conserving the moisture for useful vegetation.—C. L. Meller, Fargo, N. D., in Popular Mechanics Magazine.

GREEN MANURING AIDS SOIL

Really One of Oldest Methods—Crops for This Purpose Were Used by Ancients.

Green manuring—plowing under green crops—as a means of soil improvement, although it has been emphasized in recent years, can hardly be called a new discovery, says the United States Department of Agriculture. It is really one of the oldest methods. Crops for this purpose were used by the ancients, the Romans using lupines, which were sown in September and turned under in May for the benefit of the following crop.

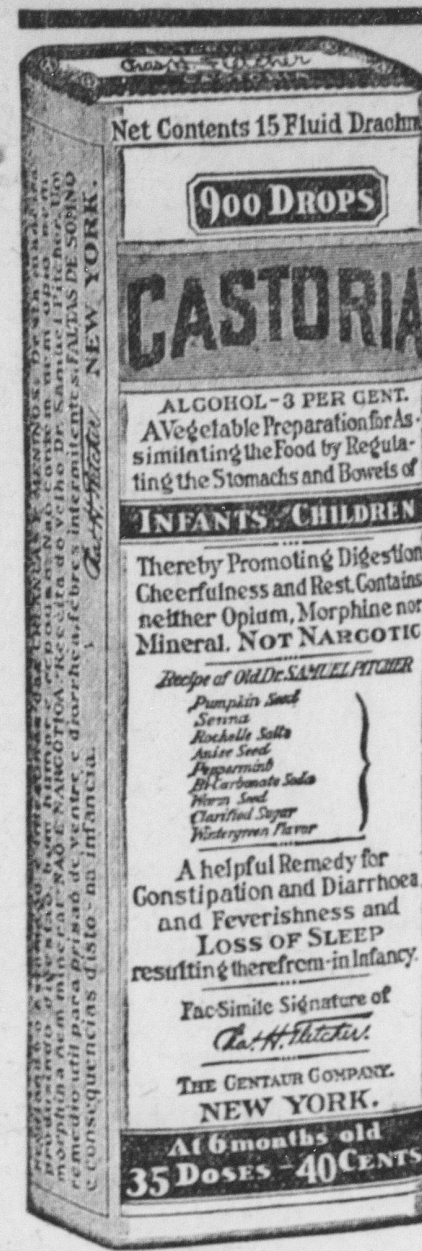

In Germany the use of lupines began in the middle of the Nineteenth century and has proved an important factor in reclaiming the sandy lands of parts of Prussia. In England legumes and other plants are commonly used; in India and Japan the farmers gather green plants of many kinds, sometimes even cutting twigs from the trees and carrying them to the rice fields.

In the United States the use of special green-manure crops is much more general in the South than in the North. Under irrigation they play an important part in orchard culture in the West, but not under dry-farming conditions.

GREAT IMPORTANCE OF GRIT

Lack of Material Will Cause Indigestion and Impaired Health of Poultry Flock.

Many poultry raisers gradually begin to slight the importance of grit. Lack of grit means poor digestion and impaired health. Regular poultry grit should be kept before the fowls in boxes or hoppers at all times. In addition, a load of gravel near the chickens' home would improve the health and increase the egg yield on many a farm.

Children Cry For Fletcher's CASTORIA

Fletcher's
CASTORIA

Special Care of Baby.

That Baby should have a bed of its own all are agreed. Yet it is more reasonable for an infant to sleep with grown-ups than to use a man's medicine in an attempt to regulate the delicate organism of that same infant. Either practice is to be shunned. Neither would be tolerated by specialists in children's diseases.

Your Physician will tell you that Baby's medicine must be prepared with even greater care than Baby's food.

A Baby's stomach when in good health is too often disarranged by improper food. Could you for a moment, then, think of giving to your ailing child anything but a medicine especially prepared for Infants and Children? Don't be deceived.

Make a mental note of this—It is important, Mothers, that you should remember that to function well, the digestive organs of your Baby must receive special care. No Baby is so abnormal that the desired results may be had from the use of medicines primarily prepared for grown-ups.

Small Girl's Ingenious Plea for Her Pet Bantam Should Have Softened Daddy's Heart.

Five-year-old Mary Jane had a pet bantam hen. Recently the latter hatched six little chickens, but she proved herself to be an unnatural mother and wouldn't take care of them.

The family was provoked and Mary Jane's father threatened to sell the hen if she didn't take care of the chickens. That brought Mary Jane to strategy. That evening when her father came home she was waiting for him.

"Where's your hen?" he demanded. "Is she caring for her chickens?" "Oh, no," Mary Jane was very serious. "She's in the hen coop getting ready to lay some more eggs to hatch some more chickens."—Indianapolis News.

Casanova Exposed.

The greatest lover and the greatest adventurer in history—Casanova—is a fake, according to Gustav Gugitz, whose work is reviewed in a recent issue of The Dial.

"He freshens up the ladies he conquers, to make them more commanding. He invents various fatherhoods for himself. And some of the greatest women whom he claims to have subdued have existed purely in his fancy," says Julius von Ludasey, and shows that even the famous escape from the Leads is a fabrication.

New Building Material.

At Marrero, La., there has been erected a factory for making building material from sugar cane bagasse. The equipment of the mill is very much like that in a paper factory. The bagasse is chipped, cooked and washed, and then sent to beaters, where it is worked up until the fibers are of the proper length. A special machine converts the pulp into board and this is dried for four hours, emerging as a finished product, quite dry and hard. It is known as celotex, and can be worked just like wood, and is solid and homogeneous.—Scientific American.

Classifying Him.

"Wombat is a scrapper."
"Wants a big navy?"
"No, wants to scrap it."

We all like to be popular, but some of us despise the work of qualifying for the part.

What's the answer to "How do you do?"

Think it over carefully—and then answer frankly. Face the facts. Do your nerves and digestion stand the jolting of the coffee drug? Can they go on standing it?

There's charm and complete satisfaction in Postum—and freedom from any harm to health.

Thousands of sensible people who have seriously looked for the answer to "How do you do?" have turned from coffee to Postum, and are doing so well, in satisfaction and health, that they wouldn't think of turning back.

You can begin today, with an order to your grocer.

Postum comes in two forms: Instant Postum (in tins) made instantly in the cup by the addition of boiling water. Postum Cereal (in packages of larger bulk, for those who prefer to make the drink while the meal is being prepared) made by boiling for fully 20 minutes.

Made by Postum Cereal Co., Inc. Battle Creek, Mich.
