POST TREATMENT IS MONEY SAVER

Experiments at Iowa College With Water Gas Tar in Conjunction With Creosote.

BY-PRODUCT OF GAS PLANTS

Creosoting Will Lengthen Life of Posts of Any Kind of Wood—Is Especially Valuable With Cottonwood or Willow.

A new economy in the preservative treatment of fence posts is in sight, if experiments with the use of water gas tar in conjunction with creosote, which are being conducted by foresters of the Iowa agricultural experiment station, justify the belief that the tar can be utilized.

Water gas tar, a by-product of artificial gas plants, is much cheaper than creosote. The purpose of the experiments is to determine whether or not the tar can be successfully used in a mixture with the creosote and in what proportions to give the best results.

The economic value of the preservative treatment of posts has been demonstrated in many cases, says G. B. MacDonald, head of the forestry department at the college. Creosoting will lengthen the life of posts of any kind of wood, but it is especially valuable with soft woods.

Tests have shown that such soft woods as willow and cottonwood, which last only three or four years if untreated, will serve as posts for from 20 to 25 years when treated. This fact makes possible the utilization by the farmer of woods of this kind on the farm which would otherwise be practically useless.

It is practicable, Mr. MacDonald points out, for a farmer to set out a small plantation of quick-growing trees, such as the cottonwood, and in five or six years have the start of a permanent supply of posts. It is estimated that a post per acre is needed every year. A considerable saving can be made by the farmer who grows and treats his own posts.

Two methods of creosoting posts are recommended by Mr. MacDonald, one in which one tank is used and another which requires two tanks. In the first method posts are put into the creosote tank with the creosote at a high temperature, and are allowed to cool in the same tank. When two tanks are used the posts are transferred, after their bath in the hot creosote, to the other tank, which contains cold creosote.

On medium-sized farms, where 100 or more posts are needed annually, a satisfactory treating tank, made of galvanized iron, about 36 inches in diameter and 48 inches high, can be purchased for about \$10.

This tank is mounted about a foot from the ground on a brick foundation, which contains a firebox. Wood is used for fuel. If the posts are to be

Removing posts After treatment in Creosote—The Posts Are Allowed to Drain in the Barrels.

given a top as well as a butt treatment, they can be inverted in the tank. This should be done in the case of soft woods.

In the single tank treatment the creosote is heated to a temperature of 200 to 220 degrees Fahrenheit. Enough creosote is put into the tank to submerge the lower three or three and one-half feet of the posts. The temperature is maintained at about 220 degrees for from two to six hours, depending upon the kind of wood being treated. The harder the wood the longer it should be immersed. The fire is allowed to die down and the posts are left in the cold creosote for from four to fourteen hours.

If two tanks are used the work can be speeded up, since the cold bath is applied in the second tank. The creosote should penetrate the posts to a depth of from one-quarter to one inch. Tests should be made to see that this penetration is secured.

NO SECRETS WITH CHICKENS

Nothing but Hard Work, Painstaking Thought and Firm Determination to Make Success.

There are no short cuts in the poultry business, no secrets and no schemes save those of hard work, painstaking thought and firm determination to make a success. This sounds a little contrary to the general idea of poultry, but it is true just the same.

SILAGE MIXTURE TO FINISH OFF CATTLE

Steers Make More Economical Gains and Shrink Less.

Test Made by Department of Agriculture in Co-Operation With Louisiana Station—Value of Different Crops Worked Out.

(Prepared by the United States Department of Agriculture.)

To get results economically most cattle feeders should use some kind of silage in the rations, says the United States Department of Agriculture. Steers fed on silage usually not only make more economical gains, shrink less, and make more profits than steers fed on dry roughage, but

Herd of Hereford Steers on a Texas Ranch.

also make it possible to utilize crops grown primarily in a rotation for restoring the fertility of worn-out lands.

The comparative value of a number of different silage crops for steer feeding was recently worked out by the department in co-operation with the Louisiana experiment station. In one instance similar lots of cattle were fed a ration of cottonseed meal and blackstrap molasses in combination with corn silage, corn and Biloxi soy-bean silage, sorghum silage, sorghum and Biloxi soy-bean silage.

The best gain was made by the steers fed the straight corn silage, but it was shown that the capacity of a farm for fattening or wintering cattle may be greatly increased by the use of heavy-yielding silage crops such as sorghum and Japanese cane. Immature Biloxi soy beans mixed with corn or sorghum were not so satisfactory, but with late-maturing crops like Japanese cane these soys gave very good results. Sorghum silage and Japanese cane and Biloxi soy-bean silage are practically equal in feeding value for steers when supplemented by cottonseed meal and molasses.

TIME TO SOW SWEET CLOVER

Best Plan Is to Plant it in Winter or Spring With Nurse Crop or During Mid-Summer.

It is not generally recommended that sweet clover be sown in corn in the fall. A better way is to sow it either in the winter or spring with a nurse crop or during mid-summer on a firm seed bed free of other crops. By having a compact seed bed and giving a heavy application of seed, it is possible that a good stand can be secured in standing corn but much depends upon the weather. An added advantage results from cutting the corn off for silage, since this gives the small plants more sunlight. There is great risk, however, in sowing any kind of seed in corn after the last cultivation because of the usual dry weather period that follows. Some farmers make a success of this sort of seeding but ordinarily it is a better policy to seed in another way if that is possible.

RECIPE FOR FLY REPELLENT

Cattle Can Be Greatly Relieved From Pests by Application of Coal-Tar Mixture.

Cattle can be greatly relieved from flies by spraying in the morning before going to pasture with some fly spray. For this the following home-made spray is efficient and cheap: Four and one-half quarts coal-tar dip, four and one-half quarts fish oil, three quarts coal oil, three quarts whale oil, one and one-half quarts oil of tar, three pounds laundry soap.

Dissolve the laundry soap in water and mix the other ingredients thoroughly and bring the whole up to 20 gallons. This spray can be applied with an ordinary spray pump and will give relief from flies the greater part of the day.

Some provision for shade will offer relief to a certain extent from heat.

SPRAY POTATO LEAF HOPPER

Bordeaux Mixture Should Be Applied Thoroughly to Under Side of the Leaves.

You can get the potato leaf hopper by using bordeaux mixture. The formula employed consists of four pounds of copper sulphate, four pounds of unslaked lime to fifty gallons of water. The spray should be applied to the under side of the leaves thoroughly, using at least 150 pounds pressure. This pressure gives a fine mist spray. At least three applications are recommended and a fourth might be given to advantage. Both sides of each row should be thoroughly sprayed to make the job complete.

Exact Copy of Wrapper.

Children Cry For Fletcher's CASTORIA

Special Care of Baby.

That Baby should have a bed of its own all are agreed. Yet it is more reasonable for an infant to sleep with grown-ups than to use a man's medicine in an attempt to regulate the delicate organism of that same infant. Either practice is to be shunned. Neither would be tolerated by specialists in children's diseases.

Your Physician will tell you that Baby's medicine must be prepared with even greater care than Baby's food.

A Baby's stomach when in good health is too often disarranged by improper food. Could you for a moment, then, think of giving to your ailing child anything but a medicine especially prepared for Infants and Children? Don't be deceived.

Make a mental note of this:—It is important, Mothers, that you should remember that to function well, the digestive organs of your Baby must receive special care. No Baby is so abnormal that the desired results may be had from the use of medicines primarily prepared for grown-ups.

MOTHERS SHOULD READ THE BOOKLET THAT IS AROUND EVERY BOTTLE OF FLETCHER'S CASTORIA

GENUINE CASTORIA ALWAYS Bears the Signature of

Chas. H. Fletcher.

TURNED JOKE ON MRS. GOULD

Occasion When Theatrical Manager Proved Himself Gifted With a Keen Sense of Humor.

"Mrs. George Gould," said a New York dramatist, "was a superb actress before her marriage, and she often entertained Augustin Daly, her old manager, at Georgian court."

"One day as the Goulds and Daly were sauntering over the Lakewood gardens a little group of strangers drew timely near."

"Pardon me, Mrs. Gould," said one of the group, "but we have heard so much about your wonderful hothouses—will you allow us to visit them?"

Mrs. Gould nodded towards Daly mischievously.

"Ask him," she said.

"Pardon me, Mr. Gould, but may we visit your hothouses?" the stranger repeated.

"Daly assumed a grand air. "Yes, yes, of course you may," he said, "and pluck just as many apricots and peaches as you like."

Bobbed Hair May Cause Baldness.

The fearful prospect of a nation of baldheaded women following in the wake of the bobbed hair craze has divided Washington beauty parlors into two bitter camps, while in the distance rumbles the thunder of an impending curling-iron war.

When hair is bobbed, it is explained, a tight hat usually is worn through which air does not reach the scalp, and which retards the growth of the hair.

In fact, it has been solemnly affirmed that the crowning glory, starved for ventilation, frequently gives up the battle and falls out.

The Tie That Binds.

Kriss—"Is the marriage contract binding?" Kross—"Yes; it keeps a man strapped for life."

DIPLOMACY TO THE RESCUE IN LINE WITH BOLSHIEVISM

With Ice Cream Cone in Sight, It Must Be Conceded That Betty Withdrew Gracefully.

Betty, who is four, had been scolded by auntie for some misdemeanor, and her feelings were badly hurt. She kept referring to the matter and saying to auntie: "All right for you, I don't care about you any more."

Finally auntie retorted: "Well, all right for you, then. If you don't care about me any more I won't care to get you that ice cream cone I intended to buy you."

Betty looked abashed for a moment. She did not wish to unbend so far as to accept a bribe, but she disliked to lose that ice cream cone.

Then her face brightened with a happy thought. "Oh—uh—April fool!" she said triumphantly.—Detroit Free Press.

Dream of Opulence.

A week before the Fourth of July, three-year-old Betty invested a quarter in fireworks, buying two boxes of victory snakes and a 15-cent package of sparklers. Every succeeding day she took them out and looked at them delightedly. On the morning of the Fourth, as she prepared to shoot them off, she said wistfully: "Oh, muvver, I wish I was a millionaire!"

"Well, Betty, why in the world do you wish that?" her mother asked.

"Why, if I was," exclaimed Betty, "I believe I'd jus' shoot off this very whole box of sparklers to once!"

Speaking of Rights.

Women who think they are not free should remember that in some cities a man cannot go into a theater with his coat on his arm, even on the hottest of days, and that the boys in the Haverhill high school cannot go without collars.—Worcester Telegram.

Men take opposite sides on the money question, but the majority are on the outside.

Parallel Drawn by H. G. Wells is a Pretty Good Explanation of Existing Situation.

H. G. Wells was discussing bolshevism.

"It's too bad," he said, "for, after all, the bolsheviks meant well. But they went too far, you see. That's our trouble everywhere. Either we don't go far enough, or else we go too far."

"Like the man in the French restaurant."

"This poor devil looked at the French menu, which was Greek to him, and then he touched an item with his finger. The waiter brought him a plate of soup."

"Well and good. His soup finished, he touched the next item. The waiter brought him a second plate of soup. With a repressed oath he touched the third item, and a third plate of soup was set before him."

"In desperation then he touched the last item of all."

"The waiter brought him tooth-picks."

Going Some.

A ducky was on the witness stand testifying as to a shooting scrape. Graphically he told how the prisoner drew a revolver, shooting at one George Henry and himself, and of how they ran to save their lives.

"How fast did you run?" he was asked.

"Fast as I could, sur!"

"And how fast did George Henry run?"

"How fast? Boss, if dat boy had eat eggs fo' breakfast he would of flew!"—American Legion Weekly.

Are your nerves sound?

HEALTH authorities agree that children should let coffee and tea alone, that their nerves may be kept free from the caffeine drug disturbance, and grow up in natural health.

Isn't this suggestion good for you, too?

There's charm for all and harm for none in Postum, that satisfying, wholesome cereal beverage which contains nothing to disturb nerves or digestion. Make the test today.
