A SCHOOL GIRL'S SUCCESS

Everything Depends upon her Health

Mrs. George E. Whitacre Tells of her Daughter's Breakdown and How Lydia E. Pinkham's Vegetable Compound Made Her a Healthy, Happy, Strong Girl

Every mother possesses information of vital importance to her young daughter, and the responsibility for her future is largely in her hands. When a school girl's thoughts become sluggish, when she suffers the consequences of wet feet, pain, headaches, fainting spells, loss of sleep and appetite, and is irregular, her mother should have a thought for her physical condition and try Lydia E. Pinkham's Vegetable Compound, which has proved a reliable aid to nature for just such conditions in so many cases.

This Mother Writes:
Mahoningtown, Pa.—"I would like to say a few words about Lydia E. Pinkham's Vegetable Compound. About a year ago I thought it would be necessary for me to take my daughter out of school. She was losing weight, was nervous, and when she would come home from school she would drop into a chair and cry, and say, 'Mamma, I don't believe I can go to school another day!' I gave her Lydia E. Pinkham's Vegetable Compound, and now she is a healthy,

happy, hearty, strong girl and weighs 120 pounds. She has no difficulty in doing her 'gym' work, and she works at home every night and morning, too. I am a mother who can certainly praise your medicine, and if it will be of any benefit you may use this letter as a reference."—Mrs. GEORGE E. WHITACRE, 621 W. Madison Avenue, Mahoningtown, Pa.

EGG TREE AMAZES MOTORISTS

It is in Plain Sight From a New York State Highway, and Seems Natural Curiosity.

Diligent search by an inquisitive office boy has failed to reveal any reference to the egg tree in the botanical catalogue, but upon good authority this unusual object can be seen any day along the state highway between Schenectady and Amsterdam, according to the New York Sun and Globe.

A peculiar feature of this egg tree is that it blooms continuously from January to December with a fruit in the shape of real hen's eggs and a shell of the same hardness. But there is a big difference, as the shells on the tree are hollow. They have been stuck on the branch of a common pine tree by the hand of Grandmother Brown rather than Mother Nature.

The egg tree is one of the chief pleasures in life for Grandmother Brown. When her daily chores are done, the white-haired old lady stealthily crosses the macadam road to add a few empty egg shells to the crop already apparently growing on the pine tree. Then she retraces her steps and sits down in her comfortable porch chair to watch the astonished passerby; and maybe to chuckle softly to herself when they step for a closer look at "another freak of nature."

Must Have Liked Her.
Little Tommy came across his father seated in his favorite armchair, smoking his pipe and reading the evening newspaper. He stood for some time looking at his seated parent until at last he put the paper down and said:

"Well, Tommy, what makes you so quiet and thoughtful?"

"Just wondering," answered Tommy.

"Wondering what?"

"If you're fond of cats or not, father."

"Cats? I hate cats."

"You don't even like our cat, do you?"

"Our cat? No, I am not particularly fond of our cat."

"I bet our cat hates you more than you hate her."

"Why?"

"Because you're sitting on her."

Freshen a Heavy Skin

With the antiseptic, fascinating Cuticura Talcum Powder, an exquisitely scented, economical face, skin, baby and dusting powder and perfume. Renders other perfumes superfluous. One of the Cuticura Toilet Trio (Soap, Ointment, Talcum).—Advertisement.

Many Victims of Wild Beasts.

China, thanks to her long history, has been able to rid herself of the most dangerous animals; but in Korea a local species of tiger, perhaps the largest and fiercest in the whole family, annually kills 2,000 peasants. Siberia, again, is affected by the ravages of wolves and bears, whose victims run into thousands every year.

32 Page Dog Book Free.

Tells how to keep your dog well—how to care for him when sick. Mailed free. Write H. Clay Glover, V. S., Dept. 90, 129 W. 24th St., New York City.—Advertisement.

Color in Necklaces.

Longer necklaces are being used, and the choice is a matter of individual preference. A necklace with a barbare touch is made of large amber beads grouped with smaller beads of carnelian and onyx. Another, of clear green jade combined with sparkling white sapphire flat heads, is as cool as a white-capped summer ocean.

Mother Neglected.

He—Well, I see the pop concerts are over.

She—Aren't they going to have any for mom?

Aid Eradication of Tuberculosis

Pugsley Signs Amendment to Regulation of Accredited Herds.

Valuation of cattle in localities where animals are practically free from tuberculosis will, no doubt, increase rapidly with the federal government's O. K. on modified accredited areas. Cattle breeders have advanced from the accredited herd unit to the point where the government is ready to accredit areas that are almost completely free from the disease.

Acting Secretary of Agriculture C. W. Pugsley has just signed an amendment to the federal regulation having to do with the eradication of tuberculosis among cattle in which provision is made for classifying certain areas where the disease has been practically eliminated as "modified accredited areas."

Work Shows Progress.

Secretary Pugsley's announcement of the new regulation, which is now in effect, states that there are many counties in various states where the cattle plague has been practically eradicated, and many others in which clean-up work has gone far. As a result, these areas will be recognized and freed from certain inhibitions which are necessary in other territories.

Last winter the United States Live Stock Sanitary association adopted the provisions contained in these new regulations. They have also been adopted by various cattle breeders' associations. The bureau of animal industry, in co-operation with state live stock sanitary authorities, will carry them out, maintaining quarantines to protect designated areas from the introduction of untested animals from other counties or states.

"Under the amended provisions a county may be designated as a modified accredited area when a complete test of all cattle in the area shows less than one-half of 1 per cent to be reactors—that is, affected with tuberculosis," says the acting secretary's announcement. "Those few herds in which infected animals were found will be quarantined and cannot be retested within less than sixty days from the date of the original test."

"Once an area is put into this modified accredited classification, no cattle can be brought in unless from an accredited herd or after having passed a satisfactory tuberculin test. However, under certain conditions they may be brought in for slaughter or for feeding and grazing."

Washington Gives Rules.
According to the announcement from Washington, when an area is designated by the co-operating state and federal authorities as a modified accredited area, it will remain in this classification for three years, provided there is no indication, through animals slaughtered or in other ways, that the percentage of tuberculosis does not exceed one-half of 1 per cent at any time.

If it is found that 1 per cent or more react, all cattle must be retested; if the infection is between one-half of 1 per cent and 1 per cent only infected herds must be retested, and when the percentage of reactors is reduced below one-half of 1 per cent the area must be classed as a modified accredited area.

Liberal Feed of Wheat

Is Favored for Poultry

Wheat is good feed for poultry, and should be liberally fed, instead of other grains, while the price is low. There is always a lot of shrunken, undeveloped wheat and other grains at thrashing time which can be fed profitably to chickens and other fowls.

It is always much more profitable to feed inferior wheat to hens and market it in the form of eggs than to sell the grain for cash. Feed skim milk along with the wheat to supply the protein.

Make Changes Gradually

in Feed for Chickens

When changes in the feed are to be made, start with a little of the new feed mixed with the kind the chicks are accustomed to, and gradually increase the proportion of the new, decreasing the old until it is dropped out. To become impatient with the results obtained from one ration and make a complete change will throw the chicks out of condition and is likely to cause bowel trouble.

Mite Most Troublesome

of Poultry Parasites

If not controlled, the red mite, the most troublesome of poultry external parasites, will sap the vitality from the birds, causing loss of vigor, reducing egg production and often resulting in death of the birds. A simple remedy is to apply creosol or sheep dip with a paint brush to the roosting poles and supports, thus saturating them to the point where mites cannot have access to the birds at night.

To Prevent Pig-Eating

Feed Sows Meat Scraps

Tankage and meat scraps fed to sows usually tend to prevent pig-eating. Let a sow have all the salt she cares for, or feed her salt pork, when she shows a tendency to kill her pigs. These measures sometimes end the trouble. Never let a sow eat the after-birth. When she does so she will be likely to kill and eat her pigs.

Tomatoes Rank Third Among Truck Crops

Need Improvement in Growing, Grading and Packing.

(Prepared by the United States Department of Agriculture.)

The tomato now ranks third in importance among our truck crops, and, according to the United States Department of Agriculture, the demand for high-quality or slicing tomatoes is increasing. Because there is need for improvement in the cultural methods and quality of the tomatoes grown for the early market, the department has published Farmers' Bulletin 1333, which is largely a summary of the methods and results of tomato growers who have been especially successful. The present need of the early and truck-crop tomato industry is not increased acreage but a general improvement in the growing, grading, packing and marketing of the crop.

Suitable soil, good seed, and well-grown plants are the foundation for the production of early tomatoes of high quality, and a number of seed firms are now making a specialty of strains and varieties that are adapted to the work. Marked progress has also been made in the development of strains that are resistant to disease. Eight or ten varieties of tomatoes are included in the list for early growing, but the bulk of the southern crop grown for shipment consists of Globe, Acme, Beauty and Early Detroit. In the North Central and Eastern states the Bonny Best, John Baer, Earliana, Greater Baltimore, Acme and Stone are leaders. In California the Stone is most generally grown.

The bulletin discusses in detail the culture of tomatoes as a market-garden crop and will be found of value to those interested in the production end of the industry and may be secured free of charge from the United States Department of Agriculture, Washington, D. C., as long as the supply lasts.

Top Price Always Paid for First-Class Eggs

Here are some suggestions for the production of good eggs, and for marketing them to get top prices:

Keep hens that produce, not only a goodly number of eggs, but eggs of moderately large size, averaging two ounces.

Be sure the laying flocks are well housed, are fed and watered regularly and, above all, have clean, dry nests.

Gather the eggs every day and, when the temperature is very hot or very cold, gather them twice a day.

Pen up all broody hens as soon as discovered and keep them off the laying hens' nests.

Gather all summer eggs, as soon as placed, in the coolest place available.

Get rid of young cockerels before they begin to annoy the hens. Also sell or confine old male birds from the time spring hatching is over until cool weather in the fall.

Bacteria Necessary for Good Crop of Soy Beans

Soy beans will make an indifferent growth in most soils unless the bacteria necessary for their nitrogen supply are present. If soy beans have not been grown in the soil before, it is wise to inoculate. Lack of inoculation is indicated by a pale greenish-yellow color of the plant. If the soil is rich the beans will grow well without the bacteria, but in such cases are taking their nitrogen from the soil and not from the air.

Mulch Orchard Trees to Conserve Soil Moisture

The grass and weeds in the orchard should be cut and left around the trees for a mulch to hold the soil moisture. For the larger trees the grass may be left where it falls, but with the younger trees it is best piled in a circle around the tree leaving a little space around the trunk, the other edge of the circle extending well out beyond the spread of the limbs.

Cow-Test Associations Work to Help Dairying

Sixty-one per cent of all the cow-testing associations in the United States are working to improve dairying in Wisconsin. The middle western states lead in association work, report the experts at the Wisconsin College of Agriculture. The leading states in cow-testing association work are Wisconsin, Michigan, Iowa, Minnesota, Illinois, Ohio, Indiana and Missouri.

Why Pure Breeds Excel

(Prepared by the United States Department of Agriculture.)
A new pictorial poster, just issued by the United States Department of Agriculture, illustrates the superiority of pure bred over common live stock and gives six reasons why pure breeds excel. The reasons are: Better conformation and quality, more products for the feed, greater uniformity, earlier maturity, more salable, and offspring more valuable. The poster is printed on cardboard and measures 15 by 18 inches. It may be obtained without cost by applying to the United States Department of Agriculture, Washington, D. C., as long as the supply lasts.

CHEVROLET

for Economical Transportation OF Farm Products

Modern, progressive farmers, being also business men, now depend on fast economical motor transportation to save time, save products and get the money.

Chevrolet Superior Light Delivery, with four post body was built especially for farm needs. It has the space and power for a big load, which it moves fast at a very low cost per mile.

For heavy work, Chevrolet Utility Express Truck at only \$575, chassis only, offers a remarkable value. Fits any standard truck body.

DECORATE HEROIC DOCTOR

Oguntole Shapara Stamped, Out Smallpox in Nigeria Where it Had Long Been Worshipped.

The history of medicine contains many chapters which describe the personal bravery of doctors in the war against disease, says the Philadelphia Bulletin. Some have voluntarily submitted to virulent infections in order to determine the potency of serums; others have lived long in fever-infested jungles, or dwelt among loathsome lepers, for purposes of research and inquiry; still others have exposed themselves year after year to the intolerable gamma rays, as they have labored in the experimental laboratories of hospitals or medical institutes. But certainly one of the strangest of cases on record of individual heroism, in the effort to stamp out some dreadful disease, is the one which has just become known through a public award for services rendered.

King George has just decorated Dr. Oguntole Shapara by way of recognition for his having stamped out smallpox in the colony of Nigeria. The fact that had until recently made it next to impossible for the government's health officers to check the plague was the existence of a secret society of savages which actually worshipped the disease as a fetish.

The members of this society deliberately spread the contagion, and induced as many as possible to engage in the fanatical ritual of self-immolation. That he might the better understand the problem to be solved, Doctor Shapara, incognito, joined this secret order and went through all the formal rites and ritual. Identification would almost certainly have meant death.

It is sometimes said, in a metaphorical sense, that certain diseases can be cured only by the application of "heretic" treatment. In no rhetorical sense, but in a very real way, smallpox was driven out of the colony of Nigeria because of Doctor Shapara's extraordinary display of personal heroism, wedded to modern medical science.

Self-Revelation.
"Does your husband talk in his sleep?"
"No, but I'm trying to train him."—Life.

Miss Phyllis Austin. English novelist, says that her best ideas for stories come to her in the bath.

Well, That Would Be Appropriate.
Mrs. Peabody was taking Mr. Peabody to task for his carelessness in his dress, and was on good ground, because Mr. Peabody doesn't use quite the best of taste. Mr. Peabody has put on a red tie and a white vest to go to a funeral. "If you were going to be attacked by cannibals," said Mrs. Peabody, "you should have on your suit and pepper suit."

Palpably False.
"I heard a queer story in town yesterday," related Gap Johnson, of Rumpus Ridge. "It was windy one day and a lady came around a corner, and a certain fellow turned his head so quick he broke his neck."

"That's just like all the men—drat 'em!" returned Mrs. Johnson. "They'll look every time a woman—"

"But the story goes that this fellow tried to look the other way, an—"

"Now, Gap, you ort to be ashamed of yourself, lying that-a-way before the children."

Took a Chance.
Secretary Hubert Killam, to whom falls the job of grading the papers of applicants for jobs in the city service, recently asked a would-be municipal chauffeur some technical questions concerning auto motors in the civil service examination.

"Which pole of the storage battery is grounded to the frame of the car?" was one of the questions, to which the applicant replied, "The south pole."—Columbus Dispatch.

Breaking Up.
The Lawyer—I don't see what you two partners are quarreling about. It's a simple matter to share the assets and liabilities.

The Client—But the question is "who's to take the assets and who the liabilities."

If coffee disagrees drink Postum

There's a Reason
