# WEAK, RUN DOWN

Lydia E.Pinkham's Vegetable Comound Brought Relief When Other Medicines Failed

longtime and nothing seemed to do me any good. My husband went to the drug store and he said to the clerk, 'I want the best medicine you have for women's troubles.' He gave

him a bottle of Lydia E. Pinkham's Vege-table Compound and it has helped me. In a short time I was able to do my housework, and now I am not only able to do every bit of that and washing and ironing, but I help my husband at the store and feel good all the time."—Mrs. L. K. MYERS, 1409 E.14th St., Winston-Salem, N. C.

Feels New Life and Strength

Keene, N. H.—"I was weak and rundown and had backache and all sorts of troubles which women have. I found great relief when taking Lydia E. Pinkham's Vegetable Compound and I also used Lydia E. Pinkham's Sanative Wash. I am able to do my work and feel new life and strength from the Vegetable Compound. I am doing all I can to advertise it."—Mrs. A. F. HAMMOND, 72 Carpenter Street, Keene, N. H.

A safe, dependable and Coughs, Colds, Distemper, Influenza, Heaves and Worms among horses and mules. Absolutely harmless, and as safe for colts as it is for stallions, mares or geldings. Give "Spohn's" occasionally as a preventive. Sold at all drug stores,

# Cuticura Soap -The Safety Razor-Shaving Soap

16,500,000 Books Printed. Basing chelusions on what is considered reliable data, an English librarian estimates that since the invention of printing in Europe in the Fifteenth century the output of the world's book presses has amounted to about 16,500,000 titles, of which some 4,400,000 have been printed since 1900. The librarian believes that perhaps 20,000 of all the books printed still

possess value.-Scientific American.

**ELECTRICITY IN FEW HOMES** 

Only 37 Per Cent in the United States Enjoy Modern Method of Illumination.

According to the figures gathered by the Electrical World less than 37 per cent of the homes in the United States enjoy the comfort of electric lighting. Think of it-almost two-thirds of our homes are without such modern equipment.

And yet in Italy only slightly more than 11 per cent of the homes are lighted by electricity; less than 14 per cent of France, 17 per cent in the United Kingdom and Ireland and about 30 per cent in Japan, which from middle May to middle June, leads all other nations with the exception of the United States with its sects. The newly hatched young nearly 37 per cent-little enough, as

Surely here is business for electragists for years to come. The wiring alone for lighting the homes of our own country will amount to considerably 'more than a billion dollars. While it used to be that this vast sum seemed inconceivable, it now easily fits into almost any picture we would

Say \$1,000,000,000 would take care of the wiring for half of the homes in the United States yet to be wired. Then that is merely the start, for beat and power, as well as light, are becoming more and more popular in the home, and the appliances furnishing these features would add more billions to the business.

In a recent survey of its members made by the Association of Electragists it was found that almost 60 per cent of them carry a stock of lighting fixtures and make a display of them. It is reasonable to assume that of the others almost 40 per cent at some time or other sell lighting fixtures when they wire the home for lighting. The lighting fixture business, then, is largely in the hands of the electragist, and thus billions of dollars more will come to him as the saturation point of electric lighting in the home is reached.

#### U. S. NOW USES OLD PALACE

Mansion Used by Spanish Governor of St. Augustine for 200 Years Now a Customs House.

Set among tropical trees, through which one gets a glimpse of the shimmering bay beyond the sea wall, and beside the cathedral, with its quaint Moorish belfry, stands the old Spanish office and customs house at St. Augustine, Fla.

The palace was built in 1603 by Gonzalo Mendez, and purchased by the king of Spain as a dwelling for the Spanish governor general. For 200 years the flag of Spain floated over St. Augustine; and then from 1763 to 1783 the British occupied the city, and it was the colors of Great Britain that waved in the gentle breeze that was wafted from Matanzas bay.

Again Spain came into possession of Florida and it was not until July 10, 1821, that the United States acquired the land of Ponce de Leon, and since that date the Stars and St: ipes have waved over the quaint old town.-Detroit News.

## Tree Alphabet.

On the estate of Sir William Geary at Tonbridge there is an avenue of alphabetical trees, which is being added to by a new set, which are being planted in pairs on each side of the existing avenue at intervals of ten yards, beginning with alder, ash, birch, catalpa, davidia, elm, fir, and so on through the alphabet to yulan and zelkova.

In the Weser district in Germany there is another fashion in trees which is entirely a commercial one. The trees have a red and blue tint, which is the result of experiments in dyeing. Each tree is hung with a receptacle containing blue or red coloring. This is conducted through a rubber tube into the roots of the tree. In about a month the coloring matter makes its way through all the branches. The trees die off and are felled, the wood being used for many purposes, but especially for making furniture.

The Right Kind of Folks.

One of the most successful real estate operators in the United States once told me:

"Give me 50 families of the right sort who will agree to live in a new locality, and there will be no trouble getting plenty more to live there. people who are wholesome, orderly, pay their bills promptly, like artistic homes and well-kept lawns, will always attract others."-Fred Kelly in the Nation's Business.

Date Palm a Beauty.

To the date palm is given the praise of being the most beautiful of all palms, and although as a family they are foreign-born, they have taken happily to the new world .- Nature Magazine.

Sounded Familiar. "I see a dancer has gotten a divorce on account of insults. The insults consisted in her husband asking her to

leave him in peace." "Is that grounds for a divorce?" asked ma .- Louisville Courier-Journal.

# Most Troublesome Pest in Orchards

Oyster-Shell Scale Attacks Apple and Other Fruit Trees.

The commonest, most wide spread and best-known scale insect in the United States attacking not only apple and other orchard trees but about 30 different kinds of shade trees, is the oyster-shell scale, so called because the form of the adult female scale is not unlike that of an oyster shell. Life History of Scale.

The life history of the oyster-shell scale may be used as an illustration for the whole group. The insects pass the winter as eggs under the old female scales, these eggs having been laid the preceding fall. The eggs are very tiny, white, and vary from 30 to 100 in number. In the spring these eggs hatch into young scale inscales are tiny, six-legged, active creatures. Soon after hatching they leave the old mother scale and wander away in search of the new and tender growths of the tree.

They may spread not only by crawling, but by being carried on the bodies of insects or feet of birds. When they have finally settled down they insert their beaks into the tree and begin drawing out sap. They soon lose their legs and antennae and their bodies become covered with white, waxy fibers. These fibers soon mat down to form the scale covering. As the insect grows the scale gradually assumes its characteristic oystershell shape, within which the legless, eyeless insect is to be found. Change Into Flies.

The male scale insects start out like the female scale insects, but when they have formed a scale and made partial growth they change into tiny winged files which emerge from under the scales.

The control of scale insects of all kinds is chiefly by spraying, and this operation may be carried on at two entirely different periods of the year and for two entirely different purposes. In one case the spraying is done when the trees are not in foliage, that is, in the late autumn or early spring, and these sprays are known as dormant sprays because of the dormant condition of the trees,

#### Good Sires Increase

Herd Production Rapidly Further proof of the manner in which a producing dairy herd may be built up by using pure bred dairy bulls

on common cows is afforded by the results of a several years' breeding governor's mansion, now used as post experiment conducted at the South Dakota experiment station. The foundation cows of the experiment represented a blending of Hereford and Shorthorn blood, each cow being sired by a pure bred beef bull and out of a grade cow. Each of the foundation cows was bred repeatedly to the dairy herd bulls in the station herd and the helfers were retained and bred to the dairy bulls, thus producing second generation crosses which had 75 per cent dairy blood. Milk and butterfat records were kept for each lactation period of the grade foundation cows and their graded-up offspring.

The average yearly production of the grade beef cows was found to be 4,155 pounds of milk and 170 pounds of butterfat. The first generation helfers produced by these cows to the service of pure bred dairy sires made records averaging 6,707 pounds of milk and 260 pounds of fat. The first cross of dairy blood therefore brought an increase of 2,552 pounds of milk and 90 pounds of butterfat in each heifer's yearly production. Expressed in per cent, the first cross helfers produced 61 per cent more milk and 52 per cent more butterfat than their dams.

## Wheat Is Excellent Feed

for Chicks and Layers Wheat is a good feed for young chickens and laying hens and may be fed with profit when the price is low. says D. C. Kennard, associate in animal industry. Ohio experiment station. The grain mixture may be of equal parts of corn and wheat, and the mash of 4 parts ground corn, 4 of medium ground wheat, and 2 of high-grade meat scraps or tankage.

If it is desired to use onts, the mixture suggested is corn 4, wheat 4, and oats 2 parts, and a mash of ground corn 3 ports, medium ground wheat 3, finely-ground oats 2 and meat scraps or tankage 2 parts.

Any change of feed for laying hens pointed out, as a sudden change may seriously affect egg production.

## Thunderstorm Doesn't

Sour Cream, Says Iowa Folks who are trying to deliver sweet cream to their creameries complain now and then that thunderstorms sour the cream.

The dairy department at Iowa State college says that a thunderstorm will have no effect on cream that is properly kept at a low temperature. For example, if milk and cream are kept in cans in a cooling tank through which flows all water pumped for the live stock, a thunderstorm will not affect either of them. The installation of such a cooling tank is not difficult por very expensive and it will make possible added income from the dairy herd through a better price for sweet

#### Hard Spring Wheat Resistant to Stem Rust

Variety Known as Kota Has Been Developed.

(Prepared by the United States Department of Agriculture.) A hard red spring wheat that is resistant to the principal forms of black stem rust has been developed in North Dakota by the United States Department of Agriculture and the North Dakota agricultural experiment station. This wheat was first intrdouced from Russia in 1903 by Prof. H. L. Bolley, and is now known as Kota: About 6,000 acres of Kota wheat were grown in 1922, and much more this

The particular virtue of Kota wheat is its resistance to the black stem rust which is general throughout the hard red spring wheat region. Its rust resistance was not determined until after the great rust epidemic of 1916. It is also fairly resistant to drought and outyields Marquis in North Dakota, averaging nearly three bushels more per acre during the past five years. It is a bearded wheat which ripens about as early as Marquis. In milling and baking experiments conducted independently by the Department of Agriculture and the North Dakota experiment station, Kota wheat has shown results nearly equal to those obtained with Marquis.

Experiments with Kota wheat have been carried on in a number of other states as well as in North Dakota, and the wheat was found best adapted to the district where durum wheat is extensively grown, Kota wheat could replace much of the durum wheat now grown in eastern North Dakota and South Dakota with profit to both the hard red spring and the durum wheat industries, department workers believe. This variety is recommended for North Dakota and adjacent portions of neighboring states.

# Every Dairyman Should

Know Profitable Cows "Every owner of dairy cows should know if his cows are giving enough milk or butterfat to make a profit over the cost of feed," says A. C. Baer. professor of dairying at Oklahoma A. and M. college. "A scale to weigh the milk in the barn can be bought for \$4. It takes only a few minutes a day extra time to weigh the milk from each cow and write the weight on a milk sheet tacked up in the barn. Once a month a sample of milk can be tested. Any creamery, Ice cream factory, or cream station will usually be glad to do this testing. Every school house ean be equipped with a tester at very little expense and the boys at school can do the testing.

"A profitable cow should produce 6,000 pounds of milk or 200 pounds of butterfat in 300 days. Are your cows all profitable? Why not find out? Is milking dairy cows a business proposition with you? If so, why not apply business methods? Write the dairy department, Oklahoma A. and M. college for information."

# Soy Beans and Corn Are

Well Balanced Hog Feed Some ask why soy beans and corn make economical gains on swine. The reason is that they are a well-balanced ration, soy beans showing a high analysis in the nutrients in which corn is deficient. For example, soy beans have more than four times as much digestible crude protein as corn, while corn has more than 21/2 times as much digestible carbohydrates as soy beans. In other words, one of these feeds is strong where the other is weak and vice versa.

## Culling Should Not Be

Done at Certain Times Culling is a constant work in the poultry yard. It should not be relegated to certain periods of the year; it takes too long to stop the appetites of the surplus cockerel and the culls. The fellow who waits until fall to sell the culls is going to lose money two ways-in the extra feed he has fed, and in the lower price paid, due to glutted market. Besides, fowls sold for table use at the right time always bring better prices than those which have been held so long that the flesh is tough.

# Immense Loss Caused by

Insect Attacks on Trees Foresters and entomologists of the United States Department of Agriculture declare that the losses caused by insect attacks upon living trees and crude, finished, and utilized forshould be made gradually, it was est products amount to \$130,000,000 annually. A recent report touching upon this and other forestry subjects declares that these vast losses clearly emphasize the need for educational work and the development of systematic control measures which now are weefully inadequate.

## Not Difficult Matter to

Produce Good Chickens There isn't any mystery in the poultry business. The essentials of it can be summed up in a few phrases: Breed 'em, feed 'em, keep 'em clean, and don't crowd 'em. Of course, you can write books about

breeds and feeds, sanitation and shelter. But it's all just common sense. Farm chickens, which have plenty of range, are practically no trouble ifter they get three weeks old. They balance their own rations, and look after themselves in the summer time.

# for Economical Transportation CHEVROLET

# Essential to Profitable Farming

\$550 Chassis Only f. o. b. Flint, Mich. Express Truck

Fits any Standard Truck Body

No business can succeed unless its product is profitably sold. Most farms have a fine production department but no sales department. They grow crops and stock bought by buyers who set the price.

One of the chief reasons for this unprofitable situation is the average farmer's poor facilities for moving his crops or stock to the place where he can sell or ship to the best advantage. Because of the time and expense of horse delivery millions of dollars worth of produce spoils annually on American farms. The saving of this waste would, in many cases, change a losing farm to a money-maker.

This low-priced, high-grade, reliable truck was designed as a money-saver and money-maker for farmers and business houses needing fast low-cost haulage of heavy or bulky goods. It fits any standard type of ton truck body. Ask any Chevrolet dealer for price of the style of body you require.
