Genuine Accept only "Bayer" package which contains proven directions. Handy "Bayer" boxes of 12 tablets. Also bottles of 24 and 100—Druggists.

Aspirin is the trade mark of Bayer Manufacture of Monocetate of Salicylic Acid

WHERE WILD GAME ABOUNDS

Yellowstone National Park is Greatest Preserve in the World—Wide Variety of Animals.

The region of Yellowstone National park is the greatest game preserve in the world, both in point of number and variety of animals. It is the home of the largest herds of elk, buffalo, antelope and mountain sheep within the United States.

Several hundred moose range the park area. There are deer of white-tail and mule varieties, many beavers, foxes, badgers, porcupines and lesser animals. Dozens of grizzlies and black bears which entertain the tourists during the summer, sleep in Yellowstone's caves during the winter.

The white gulls on Yellowstone lake leave in the fall for the Pacific coast or Great Salt lake, but a great many geese and ducks and grouse winter in the park.—Detroit News.

A Thriving Business.

"I used to think a florist had an uncertain business," remarked the rancher, as he stopped to poke some geraniums with his cane. "In fact, I supposed he was only called upon when there was a funeral or a wedding."

"We do much better than that," responded the florist. "We also officiate throughout courtships, on birthdays, at commencement exercises, on holidays, at dinner parties and after family quarrels."

Knowledge is horse power to the veterinary surgeon.

Never yell for help until you are sure you need it.

For overnight relief to inflamed eyes and sties use Roman Eye Balsam. Once tried, always preferred. 312 Pearl St., N. Y. Adv.

A Lone Honeymoon.

On board ship the passengers quickly strike up acquaintance with one another, and there was no exception to this rule on a ship that was cruising round the coast of Sweden.

Among the passengers was a young doctor, who struck up a slight acquaintance with a French student, who seemed in remarkable good spirits.

"You seem happy," remarked the doctor as the student came up to him with a laugh and a skip.

"Who wouldn't be?" was the reply.

"I'm on my honeymoon."

"On your honeymoon?" said the doctor, surprised. "Then where is—"

"Ah!" said the student. "You wonder where my wife is? Well, the money wouldn't run to two, so I had to come alone."

Another Jury Needed.

Hoffy was drawn on a summer jury, reported and was duly qualified. He then formed one of a panel which was directed to try a lunacy case. After the testimony was in and the verdict was rendered, the judge, who knew him, called Hoffy to the bench.

"Well," asked his honor, "what do you think of this kind of work?"

"Seems a sort of standoff to me."

"What do you mean?"

"We declared that man insane."

"Yes?"

"And he thinks we're crazy."

Test This Out for Yourself—

MANY people who drink coffee regularly are troubled with insomnia; or they feel nervous, "headachy," or suffer from indigestion.

It may be hard for such men and women to believe that coffee is responsible for the way they feel. Because they have always drunk coffee, it hardly seems possible that this old habit could cause trouble.

But there is one sure way to find out whether coffee is harming you. Just stop its use for a week or so, and drink Postum.

Postum is a pure cereal beverage—absolutely free from caffeine, the drug in coffee, which disturbs the health and comfort of many.

After a week or two on Postum, you will sleep better and feel better; then your own good judgment should decide whether you go back to coffee or continue on the Road to Wellville with Postum.

Sold by grocers everywhere!

Postum for Health

"There's a Reason"

Your grocer sells Postum in two forms: Instant Postum (in tins) prepared instantly in the cup by the addition of boiling water. Postum Cereal (in packages) for those who prefer the flavor brought out by boiling fully 20 minutes. The cost of either form is about one-half cent a cup.

Marketing Main Crop of Tubers

New Light Thrown on Old Questions by Department of Agriculture.

(Prepared by the United States Department of Agriculture.)

New light is thrown on old questions in the marketing of main-crop potatoes, in Farmers' Bulletin 1317, just published by the United States Department of Agriculture. The answers are based on the combined experience of marketing experts in many sections during recent market seasons.

How, when and where to market potatoes are the practical questions asked. They include hundreds of related queries which growers are asking about the selling end of the potato business. The replies necessarily make reference to production and to the conditions and methods in the great shipping sections and to harvesting, grading, packing, loading and shipment. They show which are the principal markets for nine prominent producing regions and what are the conditions, requirements, business methods and special features in a dozen great city markets.

Light on Activities.
The bulletin turns a sidelight on activities of the dealers at buying time; why they buy or wait, and how often as a class the dealers win or lose as a result of the prevailing season's business policy. It explains what faults the inspectors usually find in shipments of potatoes and how to avoid them and save freight on inferior and unsalable stock. Careful grading is considered one of the main items on which success depends.

One of the most striking conclusions is shown in barometer style; how prices tend upward when yield goes down, how the crop and its marketing may be planned according to the various indications from crop and market reports. The reader is told where and how the free reports and summaries are to be had and how to use them.

Evidently to forecast the market situation is a matter of shrewdness and experience. The outlook for a day or a week or a season depends somewhat on conditions taking shape in the present. The reader of crop and market news soon learns to look for certain changes under given conditions and in time becomes able to weigh the market importance of whatever happens in the main producing sections and in the great consuming market centers. He is able then to plan his acreage intelligently and to handle the crop with some regard to the situation and outlook. The result benefits all classes in the long run.

When the majority of buyers and sellers are equally informed, there is little opportunity for a few to gain unfair advantage. Prices thus tend to become more uniform in all sections and from season to season the extremes of oversupply or scarcity tend to become less frequent.

Course of Prices.
The course of prices is shown to depend chiefly on acreage, total supply, losses from rot, diseases or freezing, the demand and the competition, besides occasional changes according to weather and conditions of transportation. Among the regular and usual developments in average seasons is the rise after digging once, the up and down weather-market in winter, and the spring rise or decline. The stocks on hand as reported from month to month during the winter have a relation in the course of the late market.

An estimated yield of about four bushels per capita has usually been followed by falling prices, while a yield of around three bushels per capita has often been followed by rise of prices. For yields between these points the indications are not clear, but the general price tendencies during many such seasons suggest that in cases of doubt, the chance of gain may be hardly worth the cost and risk of long storage.

The bulletin bases good marketing on careful planning, good handling, grading and packing, full use of crop and market news, and of the marketing experience of other sections. Copy of Farmers' Bulletin 1317, entitled Marketing Main Crop Potatoes, may be obtained free upon request to the United States Department of Agriculture, Washington, as long as the supply lasts.

Breeders of Pure Bred Stock Must Advertise

Pure bred live stock breeders must advertise their goods just the same as the producers of other kinds of goods must advertise their products. The best way to advertise pure bred live stock is for the producer to show his samples to the public at community, county, state and national shows. Good samples, well fitted, give the breeder good advertising. Poor samples give him poor advertising so the breeder should show his best samples to the buying public in the most attractive condition possible.

Reekers Suffer Big Losses During Winter

Winter is the time when beekeepers everywhere suffer the greatest losses. Contrary to the general belief losses are practically as heavy in the South, where winters are mild, as in this section. The 10 per cent losses that usually occur could be reduced to a fraction of 1 per cent if apiculturists would pay more attention to the building of windbreaks and to the storing and feeding of bees in winter.

Crown Rust of Oats Spread by Buckthorn

Ailment Blamed on Hedge and Ornamental Plants.

(Prepared by the United States Department of Agriculture.)

Crown rust of oats is spread through certain species of buckthorn commonly grown as hedge and ornamental plants in some sections of the United States, according to co-operative investigations conducted by the United States Department of Agriculture, the Iowa experiment station, and other co-operators. An epidemic at Hinton, Iowa, caused by an infection from a 520-rod hedge, was so severe in 1921 that the oats in the adjoining fields were not harvested.

The part that these species of buckthorn play in the spread of this disease has been studied for several years. A bulletin discussing the findings of the investigators has just been issued by the United States Department of Agriculture as Department Bulletin 1162, and is now available to those interested in the subject.

The bulletin is of a technical nature, discussing the relative importance of the different species of buckthorn and citing instances of damage which furnish conclusive evidence of the fact that this shrub is responsible for the harboring and spread of crown rust infection. A copy of the bulletin may be secured from the United States Department of Agriculture, Washington, D. C., while the supply lasts.

Obtain Good Results in Control of Peach Borer

Very satisfactory results have been obtained in the control of the peach borer in the Southern states by the application of paradichlorobenzene, states the United States Department of Agriculture. Interest in the use of this material has increased widely. From present indications it looks as though 500,000 pounds of paradichlorobenzene will be used around peach trees in the Southeast this year for the control of the peach borer. Most of this amount will be used in Georgia, where a large percentage of the commercial peach growers apply the chemical. Last season about 250,000 pounds were used in the same area. Experiments to date indicate that it is safe to use the chemical, three-fourths to one ounce per tree, on trees three years of age and over. Heretofore recommendations have been limited to trees six years of age and over.

Give Vegetable Garden a Thorough Cleaning Up

Much of the success of next year's vegetable garden depends on cleaning up the trash left from this year's crops, says the United States Department of Agriculture. Insects and disease spores live over the winter in stalks, vines and stubble. Weeds and vegetable debris should be raked into piles and burned or carried off as soon as it is convenient to do so. Pieces of cabbage, carrots, potatoes and other vegetables which have been left on the ground in the harvest should be raked up and destroyed to avoid attracting insects and rabbits. The rabbits, tempted by these tidbits, may remain to bark the fruit trees and damage bushes. Time given to this work in the fall will be well repaid in the spring and summer.

Buttermilk Paint Good for All Exterior Work

A very good wash for exterior work is made by mixing three pounds of Portland cement in one gallon of buttermilk. Add such coloring as is desired. This paint must be stirred frequently to prevent the cement from settling and hardening, and it should be used as soon as possible. It will dry within six hours. It is a good weather and water resistant and is sometimes used to cover and protect the cuts on trees that have been pruned. For such use, a larger proportion of cement can be used to advantage.

It is estimated that one gallon of whitewash will cover 270 square feet of plaster; 180 square feet of brick or 225 square feet of wood, and a man should be able to put on nearly one gallon per hour.

Many Factors Determine Success in Hog Raising

Success in the hog business depends upon many factors but the two outstanding ones are the number of pigs farrowed per sow and the number of pigs raised per sow. The farmer who keeps sows that farrow large litters and saves a high percentage of pigs, cuts down the cost of raising pork. It is not necessary for him to carry a large number of sows through the winter to be assured of a pig crop, for he will raise as many pigs from ten sows as the man with the poorer sows and the greater pig losses will raise from fifteen.

Guard Against Fire in Orchard in Grass Crops

Where alfalfa, hay or straw is being produced in the orchard, care should be taken to plow fire lines and to take such steps that fire cannot run freely through the orchard. A large number of fire orchards are ruined annually by fire catching in the stubble, dried up alfalfa and similar material. A rapid hot fire is sufficient to practically ruin the trees.

IF YOU ARE SICK AND RUN DOWN READ THIS

This Baltimore Woman Suffered Greatly Until She Started To Take Earle's Hypo-Cod

Mrs. Katie Logsdon 623 Friaby St., Baltimore, Md., writes, "I was in a terrible run down condition and suffered with such frightful headaches that I could hardly lift my head. In the morning I always felt tired and my feet felt like they weighed a ton. I could not sleep well and could not eat without being disturbed afterward. My husband had to help me with my work in the evening I was in such bad shape. One evening I read about what Hypo-Cod was doing for others and I decided to give it a trial. After taking several bottles I find myself a

great deal better, in fact I am in better health than I have been in for years. I am getting very stout and find that I can eat without being distressed afterward now. My housework is now easy for me to do and I am always through by noon. I can go out in the afternoon, come home and get supper, and be ready to go to a show in the evening. It has made my life brighter in every way." You will find Hypo-Cod will help you if you are in a weak run down condition, and we urge you to get a bottle of this pleasant wine-like tasting tonic from Reads Drug Stores today or send \$1 to The Earle Chemical Co., of Wheeling, W. Va., for a full sized bottle to be sent you prepaid.—Advertisement.

Take your choice and suit your taste. S-B—or Menthol flavor. A sure relief for coughs, colds and hoarseness. Put one in your mouth at bedtime. Always keep a box on hand.

SMITH BROTHERS S.B. COUGH DROPS MENTHOL

It isn't until a boy has celebrated his eighth birthday anniversary that he begins to notice his father's ignorance.

It's an Outlet. Betty—Mamma, does papa shave because he has to, or is it just to give himself a chance to sweat?

DEMAND "BAYER" ASPIRIN

Take Tablets Without Fear if You See the Safety "Bayer Cross." Warning! Unless you see the name "Bayer" on package or on tablets you are not getting the genuine Bayer Aspirin proved safe by millions and prescribed by physicians for 23 years. Say "Bayer" when you buy Aspirin. Imitations may prove dangerous.—Adv.

Hall's Catarrh Medicine

will do what we claim for it—rid your system of Catarrh or Deafness caused by Catarrh. Sold by druggists for over 40 years. F. J. CHENEY & CO., Toledo, Ohio

Good luck is seldom displayed on bargain counters. Sometimes a man's bad luck is due to his reputation.

Are You Using this Free Service?

It comes with every sack of cement. It has been made possible through the Portland Cement Association by the eighty-six cement manufacturers who are its members.

They realized that important research and educational work was necessary to give people the best information on how to use cement. They also realized that this could be done better by unified effort than by any individual company alone.

As a result, you may have for the asking the benefit of this Association's long and exhaustive studies on how best to use cement for the most satisfactory results in concrete construction.

Whatever use you plan to make of cement—whether you are building a concrete hog house or concrete dairy barn, a stretch of concrete walk or a concrete road, a silo or a skyscraper, a home, workshop or a factory—you needn't guess. You can know.

If you want information about the usefulness of concrete under certain conditions, how to mix or place it to get the greatest value out of every sack of cement—you can get it by writing any one of our 28 offices listed below.

Supplying dependable information without charge by booklet, by letter or by personal conference when necessary, is the work of this Association. Millions of helpful booklets, covering a multitude of uses of concrete, are distributed annually to people who know they needn't guess—who know they can get the facts from us.

One of our new booklets, "Concrete in Home Sanitation," will surprise you with the number of easy ways in which concrete can be used to make the home healthier and happier. Address our nearest district office for your free copy.
