FARM CALENDAR

Timely Reminders from The Pennsylvania State College

Garden Tools—Farm labor is hard to get and high priced in many localities. Every large and small gardener or truck grower should study closely the field of labor-saving machinery and tools. Profits at the close of this year will largely be determined by the cost of production and not by the market price alone. Labor saving tools will help to lower the cost of production.

For the Dairy Cow—This is a good time of the year to plan for a supplement of green feed or silage for the pasture when it begins to get short and dry in August. Oats and peas, alfalfa, millet, second crop clover, and early corn are some of the crops which can be grown for green feed for these months.

Milk for Baby Chicks—Milk is one of the best feeds for baby chicks. It can be fed in the form of whole milk, buttermilk, sour milk, condensed or powdered milk.

Lime for Legumes—Lack of lime is one of the chief causes of failures with alfalfa or clover. Both require a sweet soil. Send a sample of soil from the field intended to seed with alfalfa or clover to your County Agent for a lime requirement test.

Forage for Hogs—Have you arranged to supply your "porkers" with plenty of forage this summer? For a unit of 20 to 25 spring pigs, one acre of alfalfa or one acre of clover, with one acre of rape for July and August grazing, or two one-acre plots of Dwarf Essex rape, make a good forage combination. The first rape plot is for early spring grazing and plot two gives fresh forage after number one gives out. Plot number one can then be sown again for late pasture.
