

PROFESSIONAL NURSE SAYS TANLAC HAS NO EQUAL

Mrs. J. Clark Says Tanlac Was More Than Match for Her Troubles.

By reason of the fact that she speaks from her long experience as a professional nurse, the statement of Mrs. J. Clark, of 415 Walsworth Ave., Oakland, Calif., will be of interest to all who are in need of an upbuilding tonic.

"In all my fifteen years' experience as a trained nurse," says Mrs. Clark's statement, "I never found the equal of Tanlac as a stomach medicine and tonic. Two years ago an attack of influenza left me without appetite and my stomach in such a bad fix that the little I did eat seemed to do me harm instead of good."

"Stomach pains would make me so weak I would feel right faint. The least exertion would completely exhaust me and six months before taking Tanlac I was so weak I had to hire my housework done. I was in bed most of the time for two months and was getting desperate."

"Tanlac was more than a match for my troubles and eight bottles left me feeling fine. I eat and sleep like a child and have energy and strength that makes life a pleasure. Tanlac is simply grand."

Tanlac is for sale by all good druggists. Accept no substitute. Over 40 million bottles sold.

Tanlac Vegetable Pills for constipation made and recommended by the manufacturers of TANLAC.

Shrewd Guess

"I heard tell in town today," related Gap Johnson of Kumpus Ridge, upon his return from a shopping expedition to the county seat, "that they arrested a member of the legislature yesterday."

"Good land!" ejaculated Mrs. Johnson. "What for?"

"I didn't ask. I judged, though, that it was for being a member of the legislature."—Kansas City Star.

There is today, as never before, a need before labor for adult workers' education.—Stephen Miller, Jr.

Assertion of Rights

The "Rights of Man" is a famous statement, in 17 clauses, adopted by the French national assembly in August, 1879. It was modeled after the American Declaration of Independence and marked out the leading principles of a limited monarchy based upon a constitution. It was severely criticized by Edmund Burke in his "Reflections on the French Revolution," and warmly defended by Thomas Paine in his "Rights of Man."

If You Need a Medicine

You Should Have the Best—Dr. Kilmer's Swamp-Root

Have you ever stopped to reason why it is that so many products that are extensively advertised all at once drop out of sight and are soon forgotten? The reason is plain—the article did not fulfill the promises of the manufacturer. This applies more particularly to a medicine. A medicinal preparation that has a curative value almost sells itself, as like an endless chain system the remedy is recommended by those who have been benefited to those who are in need of it.

A prominent druggist says, "Take for example Dr. Kilmer's Swamp-Root, a preparation I have sold for many years and never hesitate to recommend, for in almost every case it shows excellent results, as many of my customers testify. No other kidney remedy has so large a sale."

According to sworn statements and verified testimony of thousands who have used the preparation, the success of Dr. Kilmer's Swamp-Root is due to the fact, so many people claim, that it fulfills almost every wish in overcoming kidney, liver and bladder ailments, corrects urinary troubles and neutralizes the uric acid which causes rheumatism.

You may receive a sample bottle of Swamp-Root by parcel post. Address Dr. Kilmer & Co., Binghamton, N. Y., and enclose ten cents; also mention this paper. Large and medium size bottles for sale at all drug stores.—Advertisement.

Eagle Always Admired

From the most ancient times the eagle has been universally regarded as the emblem of might and courage. It was associated with Jupiter in Roman mythology and its figure on the standards of certain Roman legions has descended to the national ensigns of the United States, Germany and Russia. The eagle was adopted by the United States in 1783.

Cuticura for Sore Hands. Soak hands on retiring in the hot ends of Cuticura Soap, dry and rub in Cuticura Ointment. Remove surplus Ointment with tissue paper. This is only one of the things Cuticura will do for all toilet purposes.—Advertisement.

You may not be able to learn anything new, but there are people in the world who can teach you something old.

Granulated eyelids, sties, inflamed eyes relieved overnight by Roman Eye Balsam. One trial convinces. 373 Pearl St., N. Y. Adv.

Ban on Radio in China

Pesky Devils Quietus P. D. Q.

P. D. Q., Pesky Devils Quietus, is the name of the new chemical that actually ends the bug family. Bed Bugs, Roaches, Ants and Fleas, as P. D. Q. kills the live ones and their eggs and stops future generations. Not an insect powder but a chemical unlike anything you have ever used.

A 25 cent package makes one quart and each package contains a patent spoon, to get the Pesky Devils in the cracks and crevices.

Your druggist has it or he can get it for you. Mailed prepaid upon receipt of price by the Owl Chemical Wks., Terre Haute, Ind.

Most Fat Steers From Corn Belt

One of the Most Practical Ways of Disposing of Corn Crop.

(Prepared by the United States Department of Agriculture.)

Farmers in the corn belt are gradually modifying their cattle-feeding, cattle-fattening and beef-making operations because of the changing conditions of high-priced land, intensive farming and market demands. Where once the whole operation of breeding the cows and raising the calves, growing them on pasture and roughage to the feeder age and then fattening them for the market, was carried on at the corn belt farm, it has been gradually becoming more and more impractical to keep herds of cows to raise calves and to thus grow their own supply of feeders. Not more than a score of years ago there was an abundance of pasture and land was comparatively cheap. Today practically all land capable of being tilled is used for crop production. The raising of cattle primarily for fattening as beef has been giving way to the production of pure bred for breeding stock.

Disposes of Corn Crop.

The fattening of steers, however, affords one of the most practical ways of disposing of the corn crop and of the many roughages produced on the average corn belt farm, and most of the fat cattle are still supplied by the corn belt. Instead of growing the feeders on the farm where they are to be fattened, however, there is an increasing tendency on the part of cattle feeders to purchase their feeder supply direct from the range which is more adapted to raising and growing calves to the feeder age than to fattening them. The range cattlemen are realizing the situation and are attempting to produce a high grade feeder cattle. The corn belt grade feeders, with an abundance of fattening feeds and limited pasture areas, see where they can better afford to purchase feeders from the range area than to raise them on land which is suitable for crop production.

Organizations of breeders are being formed in many sections of the country for the purpose of assembling several droves of feeder cattle and selling them at auction. Sales of this kind are usually extensively advertised in order to get a large number of buyers to attend. Buying direct eliminates marketing expenses at the live stock markets and insures against "stale" cattle, that is, cattle held at the markets for several days. Buying at the large live stock markets is preferred by many feeders, because there may be a saving of time, and there is the possibility of buying on a "glutted" market, which usually results in much lower prices. When the receipts are normal, however, there is usually considerable competition, resulting in a price considerably higher than the range price.

Buying and selling ability plays as important a part as skillful feeding in the successful handling of feeder cattle. Successful feeders study market conditions. In some seasons certain weights and classes of cattle may be purchased more economically than others. The cattle feeder should study the demands of the market for certain seasons and feed the kind of cattle that will be in demand when they are ready for market.

Objects in Fattening. The primary objects in fattening steers are to utilize roughages for which there is little demand, to keep the soil in a high state of productivity by feeding the crops on the farm and returning the manure to the land, and to increase the income from farm operations. The fattening of cattle throughout the corn belt area is of two types—dry-lot fattening and fattening on grass. Most cattle fattened in the corn belt are dry-lot fed and are marketed before July 1. Very few cattle fed heavily on grain during the winter and spring months are ever put on grass the following summer. In some sections of Missouri feeders purchased in the fall are "roughed" through the winter largely on cornstalk fields, straws, hays, stover and silage. In the spring the cattle are turned on grass and fed a half-grain ration. Cattle handled in this way usually are marketed before September 1.

There are various rations used in dry-lot feeding, but two combinations of feeds stand out rather prominently. In those areas where legume hay, such as clover and alfalfa, is produced abundantly, the standard ration is corn and hay. In other areas, where legumes are less thrifty, silage and protein meal, such as cottonseed or linseed, are fed in combination with corn and a mixed hay.

Available Rough Land. High-priced land suitable for grain production in the corn belt area can hardly be profitably kept for pasture for the production of beef for the market. However, there are many farms having rough land that can be utilized best as a permanent pasture. Gains made by cattle on pasture are usually the most economical. When cattle are "roughed" through the winter, largely on cheap roughages, they can be marketed early the following fall at a cost materially lower than would result from dry-lot feeding. Cattle to be finished in the summer on grass, with possibly the addition of a little corn or other supplement in the fall, should not be fed heavily during the winter, but they should receive enough to maintain their weight. If

they can be kept in a healthy, thrifty condition during the winter months they will do better on grass the following summer than if heavily grain fed during the winter.

Where pasture is available there are three practical methods of fattening cattle on grass, namely, grass alone, grass and additional feed throughout the entire feeding period, and grass with additional feed the last few months of the feeding period. The grass season is usually from May to November, inclusive, which is approximately 210 days. Two acres of good pasture are usually allowed per animal. After September the average pasture begins to decrease in value very rapidly, and cattle should be marketed at this time or given additional feed. Prevailing prices of corn and concentrates, the type of pasture, and the quality of cattle should largely determine the supplement to pasture, which, might be corn alone, corn with protein supplement, or the protein supplement by itself. Where grass alone is depended upon, from four to five months of grazing will usually give best results, because pastures are at their best from June to October.

Favorable Results in Spraying Tests

Reduction in Losses From Leaf-Spot Disease.

(Prepared by the United States Department of Agriculture.)

Spraying strawberries for the control of leaf-spot diseases has frequently been recommended, and a few growers in widely separated localities have sprayed regularly for fruit rots and have reported an apparent reduction in losses. The first systematic experiments, however, for the control of fruit rots by spraying were made by the United States Department of Agriculture last year, and although the results of this one season's work must be regarded as inconclusive, some favorable results seem to be indicated.

Various sprays were used, and no one seemed to show a marked superiority over another, indicating that no really satisfactory spray schedule has yet been worked out. The investigators feel, however, that the results justify the conclusion that spraying with bordeaux mixture, and in some cases dusting, reduced the losses from rot which developed after the fruit was picked sufficiently to more than justify the expense of the treatment.

Strawberries are grown in this country under a great variety of conditions, and spray schedules must necessarily be varied accordingly. The result of the first season's work seems, however, to indicate that in the region of Beebe, Ark., where this work was done, strawberry rots may be reduced by spraying. It is accordingly planned to extend these spraying tests.

Plenty of Oyster Shell Helpful to Egg Layers

Several flock owners have, at various times, asked my opinion as to the cause of soft-shelled eggs, says a writer in the Successful Farming. Hens may occasionally lay a soft-shelled egg even when supplied with plenty of oyster shells. Sometimes this is caused by an overfat condition or a poorly balanced ration.

If any of your hens lay an occasional soft-shelled egg, make sure that they are getting plenty of green food and that they are made to exercise in the straw litter. If this is done, and the balanced ration and oyster shell do not put a stop to the soft-shelled eggs, you may be sure that the trouble is due to some abnormal condition that prevents the fowls from manufacturing the lime as fast as it is needed. When this is the case the only cure seems to be to cull out any hens that are known to lay soft-shelled eggs frequently.

Such eggs are not only a frequent loss, but the breaking and eating of them by the other fowls encourage the habit of egg-eating.

FARM FACTS

Farm machinery outside to stay, won't run so well another day.

Eat what you can and can what you can't and sell what you can't eat or can.

The farmer who does not recognize the efficiency of publicity in his business is not realizing the fullest measure of success.

More than 85 per cent of this country's corn crop is fed to live stock, and somewhat less than 10 per cent is used for human food.

Alfalfa may be sown in the spring with oats at the regular oats sowing time. The stand will depend upon the spring and early summer weather.

Except on the very smallest farms, the manure spreader soon will save its cost in time saved and greater efficiency in spreading.

Sweet clover may be sown with oats. Some growers claim that they can get a better stand of sweet clover by sowing it alone on a well-prepared seed bed but many others always use a nurse crop such as oats.

Successful swine men recommend the use of guard rails and light bedding as protective measures for the very young pigs. These two things make it possible for the pigs to avoid being overlaid by the sow.

Woman

If a man is in grief, who cheers him? In trouble, who consoles him? In wrath, who soothes him? In joy, who makes him doubly happy? In prosperity, who rejoices? In disgrace, who backs him against the world, and dresses with gentle unguents and warm poultices the rankling wounds made by the slings and arrows of outrageous fortune? Who, but woman, if you please.—William Makepeace Thackeray.

Good System

Tell yourself this story each morning:

Early one morning a ducky came into a gent's furnishings store in Chattanooga and said: "Boss, I want to pay a little on that stuff you got for me."

The same afternoon he bounded in again and said he had "a couple more dollars to put down." The merchant remarked, "Business must be pretty good with you, Sam."

Sam responded: "No, boss, I've just workin' faster."—Forbes Magazine

The Usual Arrangement
"Who's the boss at your home—your or your wife?" "Oh, we split it up—I say I am, but she really is."

You Need HANCOCK SULPHUR COMPOUND

Physicians agree that sulphur is one of the most effective blood purifiers known. For pimples, black-heads, freckles, blotches, and tan, as well as for more serious face, scalp and body eruptions, hives, eczema, etc., use this scientific compound of sulphur. As a lotion, it soothes and heals; taken internally it gets at the root of the trouble.

For over 25 years Hancock Sulphur Compound has given satisfaction.

60c and \$1.20 the bottle, at your druggist's. If he can't supply you send his name and the price in stamps and we will send you a bottle direct.

HANCOCK LIQUID SULPHUR COMPANY
Baltimore, Md.
Hancock Sulphur Compound, Ointment—10c and 50c—for use with the Liquid Compound.

ITCH!

Money back without question if HUNT'S SALVE fails in the treatment of ITCH, ECZEMA, RINGWORM, TINEA or other itching skin diseases. Price 7c at druggists, or direct from H. & E. Roberts Medicine Co., Thomas, Pa.

Fog Buoy Mechanism

Hairs from Chinese queues are stretched across a wooden frame in the mechanism of a fog buoy. The fog rolling in on the coast expands the strands of hair. This elongation of the hairs is sufficient to set in operation automatic fog bells, sirens and whistles, warning vessels off the rocks. When the fog recedes, the hair strands dry out, contract and close the valve, shutting off the signals.

Kill All Flies! THEY SPREAD DISEASE

Found anywhere, DAISY FLY KILLER attracts and kills all flies. Neat, clean, ornamental, convenient and safe. Made of metal. No oil, no glue, no sticky mess. Will not soil or injure anything. Guaranteed.

FLY KILLER at your dealer or by EXPRESS, prepaid, \$1.00.
