

## WOMAN WEAK DIZZY, FAINT

Found Relief in Taking Lydia E. Pinkham's Vegetable Compound. Always Recommends It

Bridgeport, Connecticut. — "I was completely run-down, had headaches, dizzy, faint feelings and other troubles women often have. As I had taken Lydia E. Pinkham's Vegetable Compound before, my husband said to take it again. I have now taken Lydia E. Pinkham's Blood Medicine, the Liver Pills, and six boxes of Lydia E. Pinkham's Vegetable Compound Tablets. I am feeling very good now and shall continue taking them for a while. I have been telling my cousin about the medicine and she wants to take it, too. I always recommend it." — Mrs. HENRY C. SMITH, R. F. D. No. 3, Box 6, Bridgeport, Conn.

Lydia E. Pinkham's Vegetable Compound is a splendid medicine for such conditions. It has in many cases relieved those symptoms by removing the cause of them. Mrs. Smith's experience is but one of many.

In a recent country-wide canvass of purchasers of Lydia E. Pinkham's Vegetable Compound, over 121,000 replies were received, and 98 per cent. reported they were benefited by its use. For sale by druggists everywhere.

## DO NOT TRY THE DO THIS WATCH TEST

Can You Hear?  
Place watch to ear then draw away. You should hear tick at 56 inches. Does a ringing in your ears prevent your proper hearing?  
**LEONARD EAR OIL**  
relieves both Head Noise and Deafness. Just rub it back of ears and insert in nostrils.  
For Sale Everywhere.  
Interesting descriptive folder sent upon request.

70 5th Ave.  
New York

### Embarrassing Offer

My little niece, who accompanied me to the dentist several times this summer when I was getting my set of teeth, won a large box of caramels at our church fair recently. Trying to stop her from eating so many, I said, when she offered me some, "No thanks, dear, they're bad for the teeth." when in a loud, shrill voice, before a lot of people standing in front of my booth, she replied, "I'll hold your teeth for you, Auntie, while you eat 'em."—Correspondence, Kansas City Times.

## DR. HUMPHREYS' "77"

For Grip, Influenza COLDS

Are you subject to colds? Then take Dr. Humphreys' "77" right along. Don't wait until the cold or Grip comes. Do it now. "77" is mighty efficient to protect you—from sneezing, coughing, chills, colds or the grip. Keep "77" handy. Ask your druggist for it today, or write us.

FREE—Dr. Humphreys' Manual. (112 pages.) You should read it. Tells about the home treatment of disease. Ask your druggist, or write us for a copy.

Dr. Humphreys' "77," price 30c. and \$1.00, at drug stores or sent on remittance (our risk) or C.O.D. parcel post.  
HUMPHREYS' HOME, MEDICINE CO.  
77 Ann Street, New York

**ITCH!**  
Money back without question if HUN'S SALVE fails in the treatment of ITCH, ECZEMA, RINGWORM, TETTER or other itching skin diseases. Price 75c at druggists, or direct from A. B. Richards Medicine Co., Sherman, Tex.

## Korean Lespedeza Good Forage Crop

Earliness of Legume Is Its Chief Value for Pasture in Many Sections.

(Prepared by the United States Department of Agriculture.)  
A new forage crop has been developed by the United States Department of Agriculture which will serve a useful field in that part of the United States which may be roughly described as a zone lying between southern Pennsylvania and northern Ohio on the north and the southern border of Virginia and Kentucky on the south, extending from the Atlantic coast to Iowa. It has also given promise in Kansas, on the eastern border of the Great Plains and to some extent farther west.

**Differs in Earliness.**  
This new forage crop, Korean lespedeza, is a legume and is a close relative of the common or Japanese lespedeza already widely distributed in the southern states, but differs from it in size, coarseness, and earliness as well as in technical characters. It is described in Department Circular 317, just issued by the department.

Its earliness is believed to be a weakness so far as its use in the South is concerned, and it seems probable that over the greater part of the area where it will reproduce with certainty the common lespedeza will be the more valuable form. The new variety matures so early that, in the latitude of Washington, D. C., it is ripe and dead at least a month before a killing frost and so produces no grazing at a time when the common variety is still green and fit to graze. On the other hand, the new Korean variety starts earlier in the spring and grows more rapidly, thus furnishing grazing before the common or Japanese has attained sufficient size to be pastured. Its earliness is its chief value for that part of the United States outlined above.

**Considered With Favor.**  
Included in the bulletin are several reports from various experiment stations where the new crop has been tested and it is considered with much favor. It has done exceedingly well in Iowa. A copy of the circular may be had upon request, as long as the supply lasts, from the United States Department of Agriculture, Washington, D. C.

## Raising of Early Lambs Recommended by Experts

The raising of early lambs rather than late ones is recommended by sheep husbandry men at the Kansas State Agriculture college, who say that breeding for early lambs should start early in the fall.  
It is true that early lamb raising takes more equipment and that the lambs and ewes must be partly barned. But those who raise early lambs find that their returns are more than enough to cover the cost of extra feed and care at a time when other farm work is not urgent, the live stock experts point out.

Early lambs are those which are dropped from the middle of February to March 7. They usually can be sent to market before midsummer without any trouble. Thus lambs avoid poor summer pasture and danger of worm infestation.  
Early breeding can be accomplished by flushing ewes ten days in advance of breeding season. Oats are recommended for this purpose. Flushing at breeding time makes a marked influence on the number of lambs.

## Avoid Damage From Bugs by Cleaning Out Bins

If farmers are to avoid damage from the grain beetles, they should clean out their grain bins and remove any old grain that may be left in the corners and nooks of the bin, according to Dr. C. J. Drake, entomologist, Iowa State college.  
In case the new grain must be stored with the old, inspect the old grain before using the bin. If it is infested with the weevil, treat with carbon bisulphide at the rate of one pound of chemical to 100 bushels of grain. If the grain is less than four feet deep, put the chemical in shallow pans on top of the grain; otherwise, pour it down through the grain in pipes. About 24 hours' fumigation in a tightly closed bin is sufficient to kill the unwelcome boarder.

## Ground Feeds for Hens

A good mash, containing only 17 per cent of meat scrap, for breeding and laying hens of general purpose breeds, has been developed by the United States Department of Agriculture. The remainder of the protein in the mash is contained in vegetable form and the 33 per cent of ground oats and bran gives the desired bulk. The mash seems to be particularly good in raising the hatchability and fertility of eggs. The more stimulating rations seem to cause an overfat condition.

## Handle Moist Corn Carefully

Corn which contains much moisture must be handled very carefully. It should not be put in piles or stored in such a manner that the ears touch each other. Hang the ears separately in a loft that is well ventilated and where the temperature will not reach freezing. Even if not of the best, using early selected seed of a strain known to be good will be safer than having to buy seed of unknown adaptation and productiveness.

## Much Headway Made Against Animal T. B.

Work of Eradication Going on Quite Satisfactorily.

(Prepared by the United States Department of Agriculture.)  
The work of eradicating tuberculosis from the cattle herds of the country has been going forward so satisfactorily in recent years that it is predicted by those in charge of the work of the United States Department of Agriculture that within eight years it is probable that as many as 30 states may be free of the plague. This will permit of the consolidation of the veterinary forces so that work may be carried on more rapidly in the remaining states where the extent of infection is greater. The systematic plan of eradication has been going on in earnest since 1917.

According to figures compiled from reports received by the department from field forces in the various states, about 3½ per cent of the cattle in the country are tuberculous. In many of the states, of course, the infection is much more extensive.  
The progress made in the work during the fiscal year terminating June 30, 1924, was greater than in any previous year. The accredited herds increased from 25,526 to 48,273. A better indication of progress, however, was the extension of the plan whereby areas, such as counties, have been cleaned up in one whirlwind campaign. In the past year the number of counties adopting this plan increased from 198 to 317.  
During the fiscal year 1924 more than 5,000,000 cattle were tested. The prospects are, from present indications, that this record will be exceeded by more than a million during the current fiscal year.

## Improvement in Quality Assists Value of Lambs

Most of the sheep in South Carolina show a decided lack of breeding and care, which means that in order to put a first-class product on the market some improvements must be made. These improvements require very little expense and labor, advises E. G. Godbey, associate animal husbandman, in making suggestions along this line.  
The use of pure bred rams will make more improvement in the appearance of the flocks than any other one thing. These rams can be put on the farm at from \$30 to \$50 per head. At the present time, a great number of scrub rams run with the ewes for the entire year. These rams have very poor mutton conformation and a light wool covering, and in many cases they are closely related to some of the ewes. This haphazard method of breeding has resulted in sheep that are long legged and narrow and shallow bodied. Their wool is also short, coarse and open, which makes a poor quality product for the market. One cross with a pure bred ram will make a marked change in the appearance and weight of the lambs. Save the ewe lambs and breed them after they are a year old. Buy a new ram or trade with a neighbor.

## Plain System of Poultry Accounts Is Important

A definite record of expenditures and receipts is one of the greatest needs of many poultry keepers. Without it, the poultryman is hardly able to determine the extent of success or failure of his work.  
In Farmers' Bulletin 1427, just issued, the United States Department of Agriculture gives a simple system of poultry accounts by which the necessary records can be easily kept. This system may be used either by the poultry keeper who has a small flock or by the commercial poultryman.  
A study of his records kept according to this system will enable the poultryman to determine which parts of the operation of the farm are profitable and where the costs are too much. The actual equipment necessary and the amount of feed required for the operation of a commercial poultry farm are also given.  
Copies of Farmers' Bulletin 1427 Poultry Accounts, may be had free of charge upon application to the Department of Agriculture, Washington, D. C.

## Farm Hints

- Continue to cull your poultry flock.
- Only good farm land can produce good income.
- Clean up and burn all dead and decaying plants.
- Keep all vegetables gathered to encourage fruiting.
- Farming without legumes is like writing checks without making deposits.
- Pick out the live stock which is to be shown at the fair and give it plenty of attention.
- Farm surveys show that our farm life is still too largely one of drudgery for men and women.
- Our future lack of timber will not be due to lack of timber land, but to the lack of timber sense.
- In spite of the stir, "as dirty as a pig," hogs need and like sanitary quarters and pay good dividends on the cost of such quarters.

Don't Forget Cuticura Talcum when adding to your toilet requisites. An exquisite face, skin, baby and dusting powder and perfume, rendering other perfumes superfluous. You may rely on it because one of the Cuticura Trio (Soap, Ointment and Talcum), 25c each everywhere.—Advertisement.

**Result of Explosion**  
"So Jim is teaching his wife to drive the car. How are they getting along?"  
"Oh, pretty well; but I understand it keeps him busy the rest of the day apologizing for the things he said to her during the lesson."

## Important to All Women Readers of This Paper

### Swamp-Root a Fine Medicine

Thousands upon thousands of women have kidney or bladder trouble and never suspect it.  
Women's complaints often prove to be nothing else but kidney trouble, or the result of kidney or bladder disease.  
If the kidneys are not in a healthy condition they may cause the other organs to become diseased.  
You may suffer pain in the back, headache and loss of ambition.  
Poor health makes you nervous, irritable and may be depondent; it makes any one so.  
But hundreds of women claim that Dr. Kilmer's Swamp-Root, by restoring health to the kidneys, proved to be just the remedy needed to overcome such conditions.  
Many send for a sample bottle to see what Swamp-Root, the great kidney, liver and bladder medicine will do for them. By enclosing ten cents to Dr. Kilmer & Co., Binghamton, N. Y., you may receive sample size bottle by parcel post. You can purchase medium and large size bottles at all drug stores.—Advertisement.

### King of Mountains

Mount Everest is nearly as high as the combined heights of Mount Cook (the highest mountain in New Zealand), Fuji-Yama (the highest in Japan), and Ben Nevis (the highest in the British Isles).

## Hall's Catarrh Medicine is a Combined Treatment, both local and internal, and has been successful in the treatment of Catarrh for over forty years. Sold by all druggists.

E. J. CHENEY & CO., Toledo, Ohio

### Frequent Companions

Tourist—The stork would seem to be the only animal that ever visits this community.  
Native—Wrong, stranger. It's frequently followed by the wolf when it makes its calls.

**Detective Camera**  
A pocket camera shaped like a small telescope that takes pictures at right angles to the line of vision, has been designed especially for the use of detectives, or others who desire to obtain photographs without the knowledge of the subjects. A dummy lens at one end resembles that of a field glass. Thus the user is able to take a picture at right angles to the ostensible line of vision. The view finder is contained in what appears to be the eyepiece. The camera can be focused to less than a yard or to "infinity," and uses plates or film.
