

WOMAN SO ILL WASHED DISHES SITTING DOWN

Mrs. Ashcroft's Remarkable Recovery After Taking Lydia E. Pinkham's Vegetable Compound

Covington, Ky.—"I was so weak and nervous I could hardly do my housework as I could not stand because of the bearing-down pains in my back and abdomen. I sat down most of the time and did what I could do in that way—as washing dishes, etc. One day a book describing Lydia E. Pinkham's medicine was put in my mail-box. I saw how the Vegetable Compound had helped others so I gave it a trial. I had to take about a dozen bottles before I gained my strength but I certainly praise this medicine. Then I took Lydia E. Pinkham's Blood Purifier for poor blood. I was cold all the time. I could not sit still and in the palms of my hands there would be drops of sweat. I also used the Sanative Wash and I recommend it also. You may publish this letter and I will gladly answer letters from women and advise my neighbors about these medicines."—Mrs. HARRY ASHCROFT, 632 Beech Avenue, Covington, Kentucky.

The occasional use of Roman Eye Balsam at night will prevent and relieve tired eyes and eye strain. 375 Pearl St., N. Y. Adv.

Has Walked Long Distance

Dennis Walker, a truck walker at Norristown, Pa., has figured out that in 42 years that he has been walking trucks for railroads he has covered more than 180,000 miles. Mr. Walker does better than 12 miles a day and the exercise has kept him in good physical condition.

Papuan Savagery

In Papua, only 400 miles from Australia, and part of the British empire, cases of cannibalism still occur; the Papuans have a tradition that no youth may marry until he has shed human blood.

Garfield Tea
Was Your Grandmother's Remedy

For every stomach and intestinal ill. This good old-fashioned herb home remedy for constipation, stomach ills and other derangements of the system so prevalent these days is in even greater favor as a family medicine than in your grandmother's day.

BEST for the Complexion

The beauty of Glenn's is the beauty it brings to the complexion—soft, smooth, clear white skin, free of pimples, blackheads or other blemishes.

Glenn's Sulphur Soap

Removes Dandruff Stops Hair Falling Restores Color and Beauty to Gray and Faded Hair

Removes Corns, Calluses, etc. Stops all pain restores comfort to the feet, makes walking easy. Use by mail or at Druggists. Hixson Chemical Works, Patuxent, N. Y.

LEONARD EAR OIL

for DEAFNESS and HEAD NOISES

Price \$1.00 At All Druggists

Agents—sell POWER, the Non-Inflammable

cleaning fluid. Removes spots, dirt and grease from wearing apparel without injury to color or fabric. 25c for sample and partic. Power Laboratories, 241 Greenfield, Pittsburgh, Pa.

PENNSYLVANIA STATE ITEMS

Altoona.—Arriving opportunely at the scene, Dr. C. W. Delaney, Altoona, saved the lives of Mr. and Mrs. Irvin C. Imber, of Pittsburgh, when their automobile skidded and overturned near Woodbury, landing in a pond and pinning the two occupants under it. They were rescued unconscious. Both suffered from lacerations and bruises.

Bloomsburg.—Willie Law, president of the Magee Carpet Company, announced at the annual employees' meeting that a seven per cent bonus on the earnings of all employees from January 1 to December 31 would be paid by the company. The amount will be a little more than \$80,000 and will bring the total paid in Christmas bonuses since 1919 to more than \$450,000.

Lancaster.—Fifty pounds of Christmas candy was distributed free to school children here when the automobile of H. C. Frantz was damaged in a collision with another car driven by Charles Miller, and a bucketful of candy was thrown over the street and sidewalk. All made a scramble for the candy and stuffed their pockets while the two drivers settled the dispute over the crash.

Harrisburg.—The state conscience fund was enriched by \$2 in a letter received by State Treasurer Snyder from New Berlin, and signed "Yours for honesty." The letter said that in settling up an estate a \$100 exemption from the inheritance tax was claimed and that restitution to the state to the amount of 2 per cent was desired.

Wilkes-Barre.—Frank Bogratz, aged 61, of Luzerne, shot and slightly wounded his wife, 56 years old, and then committed suicide. Mrs. Bogratz was taken to a hospital here suffering from a bullet wound in her chest and will recover, physicians stated. Bogratz, neighbors said, had been idle for some time and the shooting was the result of domestic quarrels over his inability to find work.

Warren.—Charged with the murder of his wife on the street here, John Stefos, 30, of Hamburg, N. Y., formerly a Warren business man, says she accidentally killed herself with a revolver she had taken from him. Stefos was captured nine hours after the shooting on a small island in the Allegheny river. He was overcome by Policeman George Haehn, of Warren, after a running fight. Authorities say the woman's wound could not have been self-inflicted and believe the gun was fired at close range. The shooting took place following a quarrel. The couple had been separated a month.

Reading.—A jury found Robert Brue, colored, guilty of murder in the first degree for killing Jonathan Klopp, a storekeeper near Bernville, in September. The murder followed the robbery by three men of the Klopp store. Leamon Crocker and Irvin Gringer, Brue's self-confessed partners in the robbery, also were convicted of murder in the first degree. Their confessions involved Brue, who was said to have fired the shot that killed Klopp, a young man, married less than three weeks.

Philadelphia.—While their mother was preparing supper on the first floor Michael Pippolo, 2 years old, was shot and mortally wounded by his 4-year-old brother, playing soldiers on the second floor of their home, 3002 North Twenty-second street. The younger lad died several hours after the shooting in the Women's Homeopathic Hospital. The boys had been left alone by their mother and it is believed that the child obtained the revolver by forcing open the drawer of a desk.

New Kensington.—A mother and her 4-year-old son were probably fatally burned and three other sons severely injured when a gas explosion wrecked their home. Mrs. Mary Silvee, 45, and her son John were those severely burned.

Bradford.—Earl J. Fetterly, 39 years old, proprietor of the Maple Shade Inn, at Port Allegany, near here, was killed and William Barrho, cashier of the Port Allegany First National Bank, was injured by bullets fired by a bandit who attempted to hold up Mr. Fetterly. Several men were in the hotel lobby when the bandit entered from the street door and ordered them to throw up their hands. Mr. Fetterly attempted to grapple with the gunman and was shot between the eyes. Mr. Barrho was shot when he attempted to help the dying man. The bandit escaped.

Allentown.—While crowds of persons on their way to the railroad station were passing the place a negro emerged from the throng, smashed the show window of the jewelry store of Isaac Cohen with a brick, seized a tray of diamonds and disappeared before the surprised pedestrians realized what was going on.

Glasgow.—Coming out of the Beczeris mine on the last trip, Edgar A. Davis was killed by a fall of rock.

Lewisburg.—Surgeons at the Danville Hospital amputated the left leg of Seymour Keefer, of this place, shot while hunting.

Elizabeth.—Despondent over two automobile accidents in which he figured recently, Joseph E. Hanna took his life by shooting.

Wilkes-Barre.—Mrs. Nicholas Rupko, aged 50, of Laceyville, died in the Wilkes-Barre Hospital from burns received when a lamp exploded in her home.

Producing Good Crop of Clover

One of Big Causes of Failure Is That Soils Have Become Acid or Sour.

A great many farmers are having more and more difficulty in producing a good clover crop. One of the main troubles is that the soils have been cropped until they are acid or sour. Since bacteria life does not thrive in soils that are acid, the clovers will not grow well.

Practically all soils tend to become more or less sour or acid. The decay of vegetable or organic matter produces acid. So soils rich in humus are very apt to be acid. Plant roots, in the process of growth, throw off acids that remain in the soil. Heavy, nonporous soils that do not allow the entrance of fresh air are generally acid in nature. So, practically all soils have acid in them. However, sometimes the natural lime in the soil is sufficient to neutralize the effect of the acid.

Detecting Sour Soils.
Acid, or sour soils can be detected in several ways. If clover and other legumes fail to thrive or grow on them it is a pretty fair sign of an acid soil. If such weeds as sheep-sorrel, horse-tail rush, corn spurry and wood horse-tail thrive upon the land it is again a pretty certain sign of acid or sour soils.

However these two signs are not definite enough. What we want is a test based on chemical knowledge of the reaction of the soil.

One of the most common of these is the litmus paper test. It is inexpensive and the litmus paper can be obtained at most any drug store. Be sure to get blue litmus paper.

Testing Surface Soils.
For testing the surface soil, thrust a spade to the bottom of the top soil (that which is generally turned up by the plow). Throw out a spade full or two of dirt, leaving a smooth wall. Shave off about half an inch of soil and throw in a half bushel, or similar container. Take several samples from various parts of the field and mix them. Take about a pint of the mixed dirt and sift fine. This will give a very good sample for the whole field. For sub-soil simply remove the surface soil and get your samples as before. Place a quantity of soil in contact with a small piece of the blue litmus paper. If it turns red it is a sign of an acid soil. Thousands of dollars are being lost through acid soils. Every farmer should take a little time and test his soil. Thousands of dollars can be saved by a little time and money spent in testing your soil.

Lime is the certain remedy for acid soils. For a complete discussion of the value of lime consult Bulletin No. 46, obtained from Purdue University, Agricultural Department, Lafayette, Ind.

Little Difference in Fall and Spring Pigs

The swine husbandry division of the University farm, St. Paul, through carefully conducted experiments, have found that it takes a greater variety of feeds to grow fall pigs successfully than is necessary to grow spring pigs; their explanation being that green crops are not available for fall pigs. However, fall pigs make as rapid gains when well housed and handled as do spring pigs. In the experiments it was found that the amount of feed required to produce gains was practically the same for pigs farrowed at the two different seasons. Cheaper gains were made by fall pigs because feed costs were lower in the winter than summer. Fall pigs sell at a higher price than do spring pigs, not on the quality of the pigs, however, but from the fact that they usually "hit" a more favorable market. The overhead feed cost in maintaining brood sows is greatly reduced by having them raise two litters per year.

Can Add Several Years to Life of Peach Trees

Except that the soil should not be too rich in nitrogen, the peach tree is not very particular regarding the variety of soil in which it is to stand. While the usual preference is for a sandy loam, some very good yielding orchards stand in heavy clay, as well as in the intermediate grades. Plenty of potash and lime are favorable to the peach and are really essential to long life of the tree. Peach trees seventy years old and still bearing fine crops of large peaches, are reported as standing on a limestone hill. While such an age is, of course, quite exceptional, one may have bearing peach trees of considerably greater age than the 12 or 15 years that is usually thought to be about the limit of their useful lives. A careful and intelligent selection of the site for the trees, together with the right kind of care in their cultivation, fertilization and pruning is quite likely to add several years to their lives over that which is common to neglected trees.

Soy Acreage Increased

The acreage of soy beans grown for the grain in the northern states where the crop is rapidly gaining in favor, increased about 25 per cent in 1924. The total United States acreage grown for the beans, rather than for forage, in 1924, is estimated at 534,000 acres compared with 452,000 acres in 1923. Ohio shows an increase of 18 per cent. The October 1 average condition of the crop for the United States was 79 per cent of normal.

Pure Bred Sire Is Best for Breeding

Female Ancestry Should Show High Records.

"Future development of the herd," says O. E. Reed, formerly of Kansas, now with Michigan College of Agriculture, "depends to a great extent upon the kind of sire used with the herd." It has been said that the sire is half the herd and it is a fact that all future cows in the herd carry 50 per cent of his breeding.

The herd sire should be pure bred of the breed he represents and be backed by good ancestry. If possible he should be a sire whose mother and other close female ancestry have shown high records of production. A yearly record is to be preferred to one of shorter duration.

If it is not possible to know the record of production one should by all means see the mother of the animal in question and note how closely she conforms to good dairy type. If the sire's father has daughters that have proved to be good producers he is more certain to transmit the dairy qualities desired. Very often it is possible to buy an old sire that has proved to be a good breeder. Good results from the use of such an animal are almost certain. The objection to buying an old bull is that he is high priced if his value is known and one runs the chance of getting an unruly animal. A bull calf is usually selected. A calf can be purchased for less money and the owner can train him as he chooses. Too much attention cannot be given to the selection of a sire, for future success depends largely upon the head of the herd."—Kansas Bulletin No. 167.

Codling Moth Is Able to Stand Cold Weather

The natural check put upon the codling moth larvae by low winter temperatures is often over-estimated by the fruit grower. Most of our insects winter in the pupa or egg stage and usually in well protected places. The codling moth is an exception and winters as a caterpillar under loose bark usually well above the ground surface. One would suppose that temperatures approximating zero would kill these frail larvae under their scant protection. Observations made in the state of Washington show that low temperatures do play havoc with these larvae, but unless these temperatures are exceptionally low, the codling moth does not suffer serious winter-killing. In Washington it was found that temperatures of 25 degrees below zero Fahrenheit were followed with complete killing of over-wintering codling moth larvae. Temperatures near 15 degrees below zero still allowed 30 per cent to come through unharmed.

The most efficient natural check is not temperature or birds, or even insect parasites. It is the total failure of the apple crop, due to late frosts or other causes, which removes food for the insect. It is a well known fact that after years of complete failure of the apple crop, codling moth damage is likely to be very light. Its ability to come back is strong and in the year following this failure the schedule of three sprays carefully directed against the pest, cannot be safely altered.—T. H. Parks, Ohio State University.

Egg Production Depends Largely on Green Feeds

If you want to get the best results from your hens this fall and winter, provide them with plenty of green food. Green food is essential to egg production, is a stimulant to the fowls, and also possesses vitamins that are essential to body health and development.

There are two ways of supplying green food to the hen, says D. H. Hall, extension poultry husbandman at the Clemson college. The first method is by planting green food in the yard and allowing the poultry access to it. The second method is by supplying green food each day to the poultry from another lot. The first method requires less labor and is less expensive.

The best green feeds for poultry are: Rape, cabbage, collards, oats, rye; and nearly any of these can be planted in the fall and will supply green food for the winter.

Egg production depends to a large extent on green food. Plant green food now and have high priced eggs this winter.

Farm Hints

Many a farmer could send his kids to college on good dairy cows.

Farming becomes more interesting as it becomes more intelligent.

Green feed, such as sprouted oats, cabbage, turnips, beets and rape, are necessary for the health of the pullets.

A dozen horseshoes over the barn door will not prevent the bad luck that comes from winter neglect of live stock.

Make sure that the ensilage cutter is in good repair, so that there will be no delay when it comes time for using.

The more feed one can get into pigs from two weeks of age on, the faster they are going to gain, providing, of course, provision has been made for plenty of exercise.

Children Cry for

Fletcher's CASTORIA

MOTHER:—Fletcher's Castoria is especially prepared to relieve infants in arms and Children all ages of Constipation, Flatulency, Wind Colic and Diarrhea; allaying Feverishness arising therefrom, and, by regulating the Stomach and Bowels, aids the assimilation of Food; giving natural sleep.

To avoid imitations, always look for the signature of *Dr. J. C. Fletcher* Absolutely Harmless—No Opium. Physicians everywhere recommend it.

New Wheat for World
A new British wheat that is to be on the market for sowing next year promises to revolutionize the flour industry of Britain.

Efficiency in Electricity
The electrically operated paper mills at Vancouver, Wash., have been found to be the most efficient mills of their kind on the Pacific coast.
