Why That Bad Back?
 Is backache keeping you upset? Feel all tight and nervous and dispirited and you can hardly get going? Then look to your kidneys! Your kidneys rid the body of poisonous waste. But if they lag, impurities accumulate and poison the whole system. Then one is apt to suffer backache, stabbing pains, headaches, dizziness, and other annoying kidney irregularities. If your kidneys are sluggish, help them with a diuretic. Use Doan's Pills. They are praised the world over. Ask your neighbor!

A Virginia Case
 Mrs. H. A. Campbell, Magnolia Ave., Buena Vista, Va., says: "I felt miserable from the sharp pains which darted across the small of my back. I had terrible headaches and just had to stop work. My kidneys were disordered and I knew I had to do something about it. I began taking Doan's Pills and one box relieved me."

DOAN'S PILLS
 60c
 STIMULANT DIURETIC TO THE KIDNEYS
 Foster-Milburn Co., Mig. Chem., Buffalo, N. Y.

Severe Headache and Constipation Relieved Over Night

"After a serious illness I became very constipated and suffered from awful headaches. One day I bought a box of Beecham's and found that if I took them on going to bed I would feel fine in the morning. I never have a headache now. My kidneys were disordered and I knew I had to do something about it. I began taking Doan's Pills and one box relieved me."

THE LOUD VOICE

WHEN Solomon gave utterance to the bon mot that "A soft answer turneth away wrath," he was making no personal reference to Mrs. Tobias. She had what is known as a "carrying voice." She could readily have addressed the Democratic convention without the use of an amplifier, and could have been heard as easily as William Jennings, himself.

She really had no need to employ a telephone when engaging in a conversation with her remote neighbors. Whenever she did call that instrument into use, if her windows were open, all the people within four blocks could hear her quite as distinctly as the person at the other end of the line.

It is true that nature sometimes plays us false, and starts us out into the world with harsh or high-pitched voices, that irritate people and get on their nerves and give an indication of lack of training and refinement. The loud voice is temperamental in pretty large degree, however, just as the temper is. It can be trained, modified, brought under control, and made to act properly. The loud voice suggests irritation, lack of poise, the absence of self-control.

Whenever Tolliver became angry or distressed, or when he was surprised by something untoward or unlooked-for, his voice became loud and boisterous. If he ran out of gasoline when driving his car, or lost a collar-button when getting ready for dinner, or saw one of his clerks come in late to the office, he began. No one paid much attention to him usually. His loud tones were so common as to have no emphasis, and so people set him down after a while as weak and un-restrained and out of balance.

Coleman was one of the most effective men I ever knew. He was big and strong, and healthy, and his voice was low and well-modulated. When he spoke over the telephone it was in a natural tone, as if the other man was in the room with him. When the unexpected happened, he was calm, and quiet and self-possessed. One who knew him could easily tell when he was angry, for then his voice became even lower and quieter and more restrained than in ordinary conversation. One felt the power and strength there, as one feels the restrained power in a big car throttled down. He was most impressive when he was quietest. When every one else became angry, Coleman's voice was low, and we all knew that he had himself and the situation in hand.

Solomon was right, a soft answer does turn away wrath, and a loud voice gets us nowhere.

NICKNAMES

NICKNAMES are as inevitable as taxes. They are a protest against the bad judgment of parents who start their children into the world with a name that indicates neither character nor personality. You can start your boy out weighed down and handicapped by the name of Reginald or Percy or Polidexter, but if he amounts to anything the first day he goes to school or college he comes home properly characterized.

Mrs. Mason hated nicknames, and when her first-and-only-born arrived she named him Wilbur, and never deigned to call him anything else or to let anyone else do so.

Wilbur was blue-eyed and stub-nosed and freckle-faced and red-haired and wide-mouthed. He had a sturdy body and a permanent smile, and he could play baseball, if not as well as Babe Ruth, at least well enough to skin all the fellows of his age.

"Hello Mike," the leader of the gang called to him the moment he stuck his face inside the playground at school, and Mike he was from that time on through grade school and high school and college, and still is today though he is president of one of the largest corporations in the Northwest, and the name fits him today as well as it did then.

Nicknames often suggest a physical characteristic as Fatty, and String, and Curly, and Sawed-off. Sometimes they show temperamental qualities, as Peeper, and Smiley, and Speedy. Often without any special reason a boy's name is changed simply because it does not seem to fit him properly.

My two roommates in college were christened William and George in infancy, but for some reason, which I do not now recall, we always called William, Jimmy; and George went as regularly by the name of Pete. It would have seemed ridiculous to have called them anything else.

When Sweet came to college he was at once called Perspiration, but this proved too cumbersome for the undergraduate tongue, and was soon shortened to Persé. I supposed for years that his real name was Percy and was so accented. Wyré was always called Barb, Sudbrink, Sudds, which was afterwards changed to Sonny.

There is something human and personal and friendly in a nickname. There is something wrong with a fellow whom no one has ever nicknamed. He isn't quite a democrat; he lacks a little of being a good fellow. He seems aloof from the crowd. He hasn't quite sold himself to his constituents.

Interest Boys in Managing Trees

Club Members Being Taught How to Handle Pine Wood Lots on Farm.

(Prepared by the United States Department of Agriculture.)

Club boys in New Hampshire have demonstrated through a junior extension forestry project that trees may be looked upon and managed as a crop if given attention under the direction of a forestry expert. A report received by the United States Department of Agriculture states that club boys are being taught the management of pine wood lots through handling a quarter of an acre up to an acre on the family farm. The work has been received with enthusiasm and has served its purpose very effectively. It consists of two general types of activity—planting and thinning. Sometimes the latter work is referred to as improvement cutting, or weeding.

It was found necessary to emphasize and call attention of club members to the different types of improvement cuttings and to prepare definite instructions, both written and oral, for each type. Each lot presents different conditions, and the solution of problems which require a personal visit of the junior extension agent. This limits the number of club members who can undertake the work until a forestry specialist can be added to the extension staff.

The boys who take part in the tree-planting division are expected to plant at least a fourth of an acre between March 1 and June 1 this year. The extension agent will supervise the purchase and planting of the trees. Each club member is to report the number of trees living on October 15, 1925.

Improvement cutting deals with three groups of trees—young pine stands under ten years of age, those between ten and thirty years old, and those over thirty years. The object in the first group is to free the young group from overtopping older or undesirable trees; in the second, to concentrate growth on the more valuable trees; and in the third type, to increase the diameter growth of the trees and the total production of the stand.

Thirty-one boys enrolled in the planting work last year and set out over 13,000 seedlings. Some of these were planted by boys on town land, some on national reservations, and others on the home farm wood lot. Several boys enrolled for thinning. The planting work received more popular support and public praise than the wood-lot management phase. To give this new project a start the Society for the Protection of New Hampshire Forests has offered generous money prizes for a state and county forestry contest which started this past fall. Six counties have entered, and a fresh impetus is being given the rural forestry work. The contest will extend until next October.

Cattle Tested at Rate of Six Million Annually

The tuberculin testing of cattle, to eradicate bovine tuberculosis from the United States, is now going forward at a rate exceeding six million cattle annually, according to a recent statement of the bureau of animal industry, United States Department of Agriculture.

Figures for the last six months of 1924 show that under the co-operative plan there were tested 283,935 herds containing 3,157,126 cattle. This rate of testing was a noticeable increase over that for the preceding six months. Estimates of bureau of animal industry veterinarians, based on the gradually increasing volume of testing, indicate that from six and a half to seven million cattle will be tested during the fiscal year ending June 30, 1925. This is in comparison with about five and a third million during the fiscal year 1924.

Always Give Plenty of Green Feed to Goslings

Goslings at first might have stale bread and milk, sprinkled with sand, lots of water and green food such as grass or sprouted oats with the hulls cut off. The hulls should not be given to the young goslings. After the first three or four days, they will take a mixture of four parts cornmeal, three parts bran, one part red dog, and after the first week add 5 per cent of high-grade beef scraps or mix with milk, always mixing a little fine sand with the ration. Feed them three or four times a day at first, and three times a day later. Always give plenty of green food and all the water they will drink.

Mixture of Field Peas and Oats Good for Hay

One of the most satisfactory annual hay crops in the northern states where the climate is comparatively cool and the moisture is abundant, is a mixture of oats and Canadian field peas. The field pea being a legume adds to the protein compounds in the feed and the mixture comes more nearly taking the place of clover than most other emergency crops. The crop can be grown in all of the states north of the Ohio river, and in the highest altitudes of the western states. Both oats and peas grow best on a cool, moist clay loam soil but they will grow on almost any soil that is moist and well supplied with plant food.

Swine Production of Big Importance

Necessary Feeds Should Be Considered First.

(Prepared by the United States Department of Agriculture.)

In utilizing farm wastes and in converting the concentrates raised on the farm into a marketable product, the hog is by far the most valuable farm animal, points out the bureau of animal industry, United States Department of Agriculture, in its new Farmers' Bulletin 1437, Swine Production. All regions of the United States may be considered suitable for raising hogs. The feeds used to grow and fatten hogs can be produced to a greater or less extent in practically every part of the country. Without the hog, profits in the big cattle-fattening industry of the Central West would be jeopardized.

The feeds necessary to grow and fatten hogs should be given first consideration when the question of location of a farm for hog raising is being contemplated. Feeds can be produced more abundantly in some localities than in others. Other factors, such as markets, climate and quality of soil also should be studied. It is best to start with but a few sows. As the herd increases in number a careful study of the farm should be made to determine what crops it will produce most successfully and how and to what extent hogs fit into the general plan for that particular farm.

It is always advisable to use pure bred animals in founding a herd. Much time and money are lost by starting with low-grade sows and building up the quality of the herd by the use of pure bred boars.

Copies of the bulletin may be had free, as long as the supply lasts, from the United States Department of Agriculture, Washington, D. C.

Apple Scab Is Cause of Large Losses of Fruit

That apple scab is one of the most serious apple diseases in Pennsylvania is a fact recognized by growers throughout the state, says a new bulletin, "Comparison of materials used in spraying and dusting for apple scab control in Pennsylvania," just issued by the agricultural experiment station of the Pennsylvania state college.

Figures of the plant disease survey of the United States Department of Agriculture show a reduction in yield due to scab, of 15 per cent in Pennsylvania as an average for the four years, 1919-1922, the bulletin further states. This means an average reduction of over two million bushels of apples per year in this state for the same four years. Apple scab is caused by a parasitic fungus which lives during the winter on the dead leaves under the trees.

While it has long been known that certain sprays, if applied at the proper time and in the proper manner, would serve to protect the leaves and fruit against infection by this fungus, the most efficient and practical materials and the best time to use them present a problem upon which the station has been working for six years.

During this time experiments have been conducted in 26 commercial orchards in Adams county, as well as in the experiment station orchards in Centre county, and one orchard each in Franklin and Chester counties. Eighteen different materials were applied on nine separate plots and 111 different combinations as to material and time of application.

The results of the various sprays and dusts are given in the bulletin so that growers interested in the control of apple scab may easily get the latest information on this vital subject.

FARM NOTES

Forest fire protection costs little and saves much.

Weeds are weeds and should be treated as such.

Sweet corn needs the germination test fully as much as field corn, this spring.

Plant sound seed in a well prepared seed bed to be assured of a good crop stand.

Pumping water by hand is all right—when a man needs exercise and has plenty of time.

The potato is a staple crop which can profitably be grown in either a large or small orchard.

Pity the little chicks and keep their hover warm. They'll repay you in eggs when they grow up.

The garden is no longer a plaything, but a very valuable aid in producing the food supply of a farm.

Proper spraying of the early Irish potato crop has increased the yield 74 bushels per acre, according to tests made by Dr. R. W. Leiby of the North Carolina experiment station.

Rape should be drilled on plowed ground at the rate of six to eight pounds per acre. It grows well during the cool periods of the spring and is in shape for feeding in June. It can also be seeded between the corn rows at the last cultivation and makes an excellent crop for fall forage.

Cuticura Soothes Baby Rashes That itch and burn, by hot baths of Cuticura Soap followed by gentle anointings of Cuticura Ointment. Nothing better, purer, sweeter, especially if a little of the fragrant Cuticura Talcum is dusted on at the finish. 25c each.—Advertisement.

Forgiveness as an Art
 If you forgive a friend be sure you do it with a manner which permits him to forgive himself.—Don Marquis in New York Herald-Tribune.

SWAMP-ROOT FOR KIDNEY AILMENTS

There is only one medicine that really stands out pre-eminent as a medicine for curable ailments of the kidneys, liver and bladder.

Dr. Kilmer's Swamp-Root stands the highest for the reason that it has proven to be just the remedy needed in thousands upon thousands of distressing cases. Swamp-Root makes friends quickly because its mild and immediate effect is soon realized in most cases. It is a gentle, healing vegetable compound.

Start treatment at once. Sold at all drug stores in bottles of two sizes, medium and large.

However, if you wish first to test this great preparation send ten cents to Dr. Kilmer & Co., Binghamton, N. Y., for a sample bottle. When writing be sure and mention this paper.

Airplane Operation Cost

It costs \$400 to \$3,000 a year to operate an airplane, depending on the type of plane used. United States army estimates show.—Science Service.

RESINOL Soothing and Healing Clears Away Blotches

Whiskered Strawberries

Strawberries grow "whiskers" in the final stage of the black mold disease, with which they are frequently infected through bruises received in careless handling.—Science Service.

For speedy and effective action, Dr. Peery's "Red Shot" has no equal. A single dose cleans out Worms or Tapeworm. 372 Pearl St., N. Y. Adv.

Money Does Do That
 Flickers—I heard you had money left you.
 Vickers—Yes. It left me long ago.

Talking and eloquence are not the same—to speak and to speak well, are two very different things.

GET FEELING WELL AGAIN

From Mother Nature's storehouse we have gathered the roots, barks and herbs which are compounded, under the famous Tanlac formula, to make Tanlac. This great tonic and builder has brought health and strength to millions.

If your body is weak and under-nourished, if you can't sleep or eat, have stomach trouble or burning rheumatism, just you see how quickly Tanlac can help you back to health and strength.

Most people notice a big change for the better after the very first bottle. They have better appetites and more pep. The sparkle comes back to their dull eyes and color to their faded cheeks.

Don't delay taking Tanlac another precious day. Stop at your druggist's now and get a bottle of this, the greatest of all tonics.

Take Tanlac Vegetable Pills for Constipation

"Just a little Bee Brand Insect Powder and all the Flies were dead."

Thousands of housewives have discovered that the nuisance is unnecessary. One writes from Greenwood, Miss., "We used _____ until the odor made us sick, but no results. We then sprinkled just a little Bee Brand Insect Powder in the room and in a few minutes the only flies in sight were dead."

Bee Brand Insect Powder is so easy to use, and so quickly effective. Close doors and windows. Blow Bee Brand from a piece of paper into the air. The almost invisible particles find the flies and kill them. It is also effective to burn the powder. Bee Brand Insect Powder kills Flies, Fleas, Mosquitoes, Ants, Roaches, Water Bugs, Bed Bugs, Moths, Lice on Fowl and Plants, and many other House and Garden Insects.

It's harmless to mankind, domestic animals and plants. Will not spot or stain. In red, sifting-top cans, at your grocer's or druggist's. Household hold size 10c and 25c. Other sizes 50c—\$1.00.

No expensive gear necessary. Puffer gun, 10c.

Get our FREE Booklet, "It Kills them" a guide for killing house and garden insect pests.

Bee Brand Necessary as Soap and Water
 Every home needs the protection of Bee Brand Insect Powder. It should be used regularly to prevent insects. Keep a can always on hand—and blow or scatter it wherever insects may be hidden.

McCormick & Company, Baltimore, Md.
