

The Old Standby in a New Dress

—the same dependable remedy that over a period of more than fifty years has been found so reliable in the treatment of catarrh and diseases of catarrhal nature.

The outside of the package only has been altered. To facilitate packing and reduce breakage in shipping, the paper wrapper which has identified the Pe-ru-na bottle for many years has been displaced by a substantial pasteboard carton.

Pe-ru-na cannot be made any better. Three generations of users testify that Pe-ru-na is the best remedy in the world for catarrh and diseases of catarrhal origin.

The remedy our fathers and grandfathers used with so much satisfaction is still the standby for the ill of everyday in thousands of American homes.

PE-RU-NA

The Original and Reliable Remedy for Catarrh

Sold Everywhere in Tablets or Liquid

Send 4 Cents for booklet on catarrh to the Pe-ru-na Company, Columbus, Ohio

Economy

Receiving sets are to be distributed by a British missionary to natives in the South Sea Islands. Coconut palms, 80 to 90 feet high, are to be used for aerial masts.

"But isn't it expensive running a country house every summer?"
"No; I save money. We can't get help to stay out there and my wife has to do all her own work."

Radio for South Seas

Receiving sets are to be distributed by a British missionary to natives in the South Sea Islands. Coconut palms, 80 to 90 feet high, are to be used for aerial masts.

CHILDREN CRY FOR

MOTHER:—Fletcher's Castoria is a pleasant, harmless Substitute for Castor Oil, Paregoric, Teething Drops and Soothing Syrups, especially prepared for Infants in arms and Children all ages.

To avoid imitations, always look for the signature of *Dr. J. C. Fletcher* Proven directions on each package. Physicians everywhere recommend it.

The Modern Salvager

Electricity is an efficient salvager. Electric cranes equipped with electromagnets handle great quantities of metal junk at the nation's 3,000 scrap yards. The larger sections of scrap are chewed up in enormous electric shears or smashed with a tremendous electric "skull-cracker." Nearly half the manufactured steel of the country comes from reclaimed iron and steel junk.

Did you ever have a pair of soles outlast the uppers? If not, you have never worn USKIDE Soles. People write that they can't wear USKIDE out. It is the Wonder Sole for Wear! Made by the world's largest rubber manufacturer, the United States Rubber Company. Comfortable, healthful, waterproof, good-looking. Tell your repairman to put USKIDE Soles on your shoes. Buy new shoes with USKIDE Soles. USKIDE will cut your shoe bills down. Get genuine USKIDE. The name is on the sole.—Adv.

Conceit of a young man of twenty doesn't disappear when he's forty; he has only hid it.

Headache Pain Toothache Lumbago

DOES NOT AFFECT THE HEART

Safe Accept only "Bayer" package which contains proven directions. Handy "Bayer" boxes of 12, tablets. Also bottles of 24 and 100—Druggists.

Aspirin is the trade mark of Bayer Manufacture of Monocrotic Acid of Salicylic Acid

Dry Cellar for Wintering Bees

Where Temperature Falls Below 25 Degrees Good Quarters Needed.

(Prepared by the United States Department of Agriculture.)

In localities where the average winter temperature falls below 25 degrees Fahrenheit it is usually best to winter bees in a cellar, especially if the apary is unprotected from the winter winds and when the winter stores are of satisfactory quality. The placing of bees in a cellar is only another way of insulating the entire number of hives in one lot instead of insulating them in groups or singly, as is done in outdoor wintering.

A good dry cellar under a residence heated by a furnace ordinarily makes a desirable place to winter bees. Partition off a portion of the cellar through which some of the furnace pipes run in order to provide sufficient heat for the bees. If the room becomes too warm, insulate the pipes somewhat. A temperature of 50 degrees Fahrenheit is suitable for a cellar in which bees are being wintered. If the dwelling has no cellar of the kind required it may be possible to construct one in a sandy hillside, using the soil as a floor and building wooden walls to prevent the cellar from caving in. A cellar excavated in moist soil will require walls and floor of waterproof concrete. Locate the ceiling below the frost level, which, in regions where bees are best wintered in cellars, is at least 2 1/2 feet below the level of the ground. Leave a distance of 6 1/2 feet between the floor and ceiling. If the ceiling is higher than this it will usually result in too low a temperature at the floor.

Insulate Ceiling. Cover the ceiling completely on top with some insulating material, such as sawdust, to a depth of 1 1/2 feet. If the cellar is built in a sandy soil it is possible to use the soil as a cover for the ceiling, a 3-foot layer of soil over the inner roof of the cellar being sufficient. The entire insulating material of whatever kind used should then be protected by a roof projecting at least 2 feet, preferably more, beyond the outside of the cellar wall. Make provision for carrying off the water from the roof. Locate the cellar, if possible, close to the apary, not farther away than 50 yards at most, where the drainage is good and where the snow drifts deeply, thus providing additional insulation for the cellar. If the cellar is on level ground the drifting of snow may be increased by the construction of open fences such as are used to prevent drifting over railway tracks.

A ventilating shaft six inches square running through the ceiling of the cellar to the outside and so constructed as to admit no light will be sufficient for any cellar adapted to wintering of bees. The top of the ventilating shaft, which should extend at least six feet above the outer roof, may be painted black in order to induce greater movement of air when the sun shines. At times during the coldest weather the ventilator may be nearly or entirely closed. In a warm cellar built in a sandy hillside no ventilating shaft need be constructed.

Best Type of Vestibule. In constructing an entrance to the cellar proper insulation must not be overlooked. The best type of vestibule is a long narrow passage leading into the cellar, with heavy doors at each end of the vestibule. The heavier and thicker the doors the better for the bees. It is important that the vestibule be built and protected so that the temperature within it will never fall below freezing. It is desirable also that the vestibule be constructed so that bees may readily be carried in and out of the cellar.

The cellar must be well drained, either by natural or artificial means. Before carrying the bees into the cellar give it a good cleaning and leave it open to air several days.

Storing Seed Beans to Keep Little Weevil Out

A problem that often confronts the farmer and housewife who wishes to keep some of the seed from the garden is, how may this seed be stored to keep the bean weevil out? If the beans are kept only for eating purposes, one may heat them before putting them in a box, sack or fruit jar; or boiling water may be poured over them. However, for seeding purposes, neither of these will work. In this case the beans should be thoroughly dry and put into a fruit jar with camphor gum. A small amount of the gum is all that is necessary as it is strong and lasting. Usually the eggs are laid in the beans before they were hulled and the gum must be used to help in controlling the young weevils when they hatch. If the seed is put into an open container the beans may become contaminated or infested. So they should be kept in a jar or something that is tight enough to keep the adult beetle or bug out.

Business and Success

You can nearly always tell a farmer's success and business ability by the appearance of his house and barn. No good business man will permit his buildings to remain unpainted and in a dilapidated condition for he knows that he is losing money by doing so and the man who is unconcerned about the appearance of his premises is apt to be careless in his farm practices.

Plow Under Residues to Help Fertility

Supply of Organic Matter Is Very Essential.

Don't rake off or burn the trash left on the fields after the crop is harvested. Plow it under. It contains plant food of a value from \$5 to \$15 per acre and will increase crop yields the following year.

"Even where we use summer and winter legumes for soil improvement, the main crops have a larger acreage and therefore the cover crops planted are not sufficient to maintain the supply of organic matter," says W. F. Pate, fertility agronomist at the North Carolina State college. "This being the case, it is necessary to plow under the crop residues such as corn stalks, cotton stalks, tobacco stalks, peanut vines, grasses and other vegetative matter. This will help to keep up the supply of organic matter."

Professor Pate states that the system of farming generally practiced in North Carolina tends to deplete the amount of organic matter in the soil. This causes the soils to wash and the crops to suffer under abnormal growing seasons as a late cold spring, too little rain or too much rain. In most cases, where a soil has yielded smaller crops from year to year, the reason can be found in that the supply of organic matter has not been maintained. Then, in nearly all cases where the soil is increasing in crop producing power, the supply of organic matter is increasing.

"Years ago when our farming implements were crude or inadequate, there was some reason for burning the crop residues but now," says Professor Pate. "With heavy plows, disk harrows and tractors available, it is a crime not to turn under these valuable crop residues. By practicing fall and winter plowing, the crop residues, sometimes called trash, will be completely incorporated into the soil and no trouble will be had in the spring in preparing a good seedbed."

Bad Housing Conditions Cause Various Diseases

Colds of poultry which are similar in many respects to the colds of the human family, should be regarded critically as they may be the forerunner of more serious trouble, such as nasal or ocular roup, diphtheria or birdpox.

Poor housing conditions cause many flocks to acquire colds, especially in the fall. Chicks should be trained to roost as soon as possible, as this allows a circulation of air around their bodies. Dampness in houses should be particularly avoided. Chickens that do not have sufficient feed or the proper kind of food acquire colds easily. A balanced ration, consisting of approximately equal parts of mash and grains, supplemented with plenty of succulent green feeds, is one of the best preventatives.

In preventing colds from developing into more serious trouble, where whole flocks are affected due to exposure, it is often advisable to administer epsom salts at the rate of 1 to 1 1/2 pounds to 100 adult birds, say poultry men at the Kansas State Agricultural college.

Unsanitary pens as compared with clean ones result in a death loss of 35 per cent, experiments conducted by the Kansas State Agricultural college show. Proper sanitation includes all measures that are conducive to good health, but is probably more considered in connection with the cleanliness of houses, yards, runs and general quarters as well as the feeding and drinking utensils. It also includes the control of both internal and external parasites.

Fall Is Best Time for Spreading Ground Lime

The fall of the year is usually the best time for the hauling and spreading of ground limestone. The stubble fields are usually hard and the roads mostly good and the field work not so pressing as in the spring. Some farmers have used hydrated lime at the rate of about 200 pounds to the acre and received good results with it. Where the haul is long from the railroad siding, this type of lime treatment for soil is worth trying, because of the reduction of labor. Some men have hauled the crushed limestone in contractor dumping trucks and then dumped the ground limestone at the end of the fill and then spread with a lime spreader.

Farm Hints

Frequent cutting tends to kill out alfalfa.

Where you find scrub sires you usually find a scrub farmer.

In one year eggs and chickens worth \$1,047,323,170 were produced in the United States.

Gophers "played possum" during the dry weather but are making the dirt fly since the fall rains started.

Seed corn should be selected in the field from healthy, erect and well-matured plants. Place the ears in a well-ventilated place for drying.

Field selection of good seed corn should be attended to. If the work is well done, no other farm operation will pay a bigger dividend.

Mule "Swap" Brought Fortune to Lucky Man

Eleven years ago Joseph Beach of Caldwell, N. J., drove his balky mule, Maud, down the streets of the village, and met John Gosman. They stopped to talk. Then Gosman noticed the fidgeting Maud.

"How'll you swap, Joe?" asked Gosman.

"Can't say, John," replied Beach.

"Got a piece of land down Florida way; Palm Beach or West Palm Beach, some such a place," Gosman answered.

"Worth \$75, you reckon?" Beach asked.

"Guess so, let's swap," Gosman replied.

And they signed the papers.

Beach is departing for West Palm Beach soon to look at the property, for which he has been offered a small fortune.

Maud is dead.—New York Herald-Tribune.

DEMAND "BAYER" ASPIRIN

Aspirin Marked With "Bayer Cross" Has Been Proved Safe by Millions.

Warning! Unless you see the name "Bayer" on package or on tablets you are not getting the genuine Bayer Aspirin proved safe by millions and prescribed by physicians for 25 years.

Say "Bayer" when you buy Aspirin. Imitations may prove dangerous.—Adv.

Famed War Spy Went to Her Death Alone

During the Civil war there were many spies on both sides, some of them women. From Memphis, Tenn., there came to serve the Confederate cause, Virginia B. Moon, a girl so full of pep that everybody called her "Miss Gopher." It is said she had no fear of death. She carried morphine and dispatches through the Union lines. Twice she won release from her captors by exercising her wiles on them. She was first arrested in Cincinnati by an officer who was once chief of General Grant's staff. She was commended by Jefferson Davis for her work. As a heart-breaker this girl was no slouch; she boasted of 14 bona fide proposals she had spurned when a southern belle.

In her later life Miss Moon did some acting for the movies; then she settled down in New York—alone. She died recently at the age of eighty-one.—Pathfinder Magazine.

Movie Intelligentia

Frederic Massas, the Spanish portrait painter, said in Los Angeles: "People told me your young movie stars weren't cultured."

Mr. Massas chuckled and went on in his excellent English:

"I dined at the Montmartre with a beautiful movie star the other night, and we plunged into literature straight off. She began to crack up Arlen, but I interrupted her.

"I suppose you're pretty well acquainted with Shakespeare? I said.

"She laughed and flicked a bread pellet at me.

"No, you don't," she said. "You can't string me! Shakespeare's dead."

Success Rules

There are scores of starters to every finisher. Every person who gets ahead recognizes, consciously or unconsciously, four rules for success: First, he makes up his mind; second, he's happy and keen at his work; third, he studies and thinks; fourth, he finishes what he starts.—Grit.

His Attempt

"My least boy, Benrat, got sorter riled, as it were, at his brother, Bunt, yiste'dy and hit him on the head with the ax," related Gap Johnson of Rumpus Ridge.

"Great guns!" ejaculated an acquaintance. "What was he doing with the ax, anyhow?"

"Trying to — yaw-w-w-w—make Bunt eat it, or something that-a-way, according to what the rest of the kids said afterwards."—Kansas City Star.

The people who never make mistakes are highly uninteresting.

A Farmer 40 Years Ago

Roanoke, Va.—"When I was a young man farming, over 40 years ago, my appetite failed, I lost my grip on work—had no ambition whatever, and could not sleep well at night. Then malaria got into my system. I wrote Dr. Pierce and told him of my condition, and upon his advice, I took Dr. Pierce's Golden Medical Discovery and it gave me a feeling of health and strength in place of that mean, tired, worn-out feeling I had."—B. W. Nash, 803 Campbell Ave., S. E.

All dealers. Liquid or tablets. Send 10c to Dr. Pierce, Buffalo, N. Y., for trial pkg. Tablets and write for free medical advice.

WHY SHOULD ANYONE SUFFER WITH INDIGESTION OR ANY STOMACH MISERY?

If you want to fix up your dyspeptic, out of order stomach so that you can eat what you eat with not the least bit of after distress, do what tens of thousands of people have already done. Getting rid of gas, bloating, belching, heaviness and that feeling of near suffocation isn't such a hard matter as you may think—you've been getting hold of the wrong medicine—that's all.

But better late than never—ask your druggist for a bottle of Dare's Mentha Peppin—a real stomach medicine and a very pleasant one. For acute indigestion one or two doses is enough, but when the trouble is chronic, two or three bottles may be needed to put your disordered stomach in good healthy condition and make life worth living.

Making a start is the main thing, so why not get one bottle today with the distinct understanding that if it doesn't help you the purchase price will be returned.
