A Promise

"Whether, can I be a flirt with you or not?"

"Yes—if you are a good girl!"

Looks for Increases in Pearl Production

Rising prices for pearls and enlarged production in the pearl diving industry are expected to bring a total pearl production of about 5,000,000 francs during 1925, according to advices to the Commerce department from Phineas Haskewitch, one of the large pearl buyers in French Oceania.

Pearl diving is hazardous business. Mr. Haskewitch said, and its results difficult to approximate. The estimated production of 1,920 tons of shell for this year is expected to produce about 950 pearls, with a present average price of 4,000 francs. A good pearl ordinarily appears for every 5,000 pairs of pearl shells.

Pearls are found in waters where coral polyps make their home. Mr. Haskewitch explained, the appearance of coral being usually accepted as forecasting the appearance of pearl oysters.

In the Big League

A rising young burglar had just moved in from Milwaukee to Chicago and won the hand of Chi Bessie, the famous dip. He rushed home one morning in the wee, small hours in high excitement.

"Wake up, kid!" he shouted to his wife. "Wake up! Pack up! We gotta hop a rattler quick. I just cracked the biggest crib in town and bumped off a couple harness bulls!"

"Aw, shut up and go to sleep," expostulated the fair lady. "You're in Chicago now."—From Everybody's Magazine.

Important Factors in Care of Bees

Much Depends on Activity of Bees and Weather.

(Prepared by the United States Department of Agriculture.)

The annual crop of a colony of honeybees is dependent upon a considerable number of factors, part dealing with the activities of the bees and part resulting from the various external factors influencing the secretion of nectar by the honey plants of the locality. Weather suitable for the secretion of nectar and the storing of it by the bees is one of these important factors. Although the weather is beyond the control of the beekeeper, a knowledge of the influence of weather factors upon honey crops in various parts of the country will be of great value in developing the best beekeeping region of the United States.

To gain this knowledge it is first of all necessary to keep certain colonies under observation, recording at frequent and regular intervals the weight of each, and recording such accompanying phenomena of the weather as may reasonably be supposed to influence either the secretion of nectar or the activities of the bees. The results of making a careful record of this kind with two colonies of bees at the bee culture laboratory of the bureau of entomology, and the mathematical analysis of the records kept, are included in United States Department of Agriculture Bulletin No. 1339, "The Effect of Weather Upon the Change in Weight of a Colony of Bees During the Honey Flow," by James I. Hambleton, apiculturist in charge of the department. The bulletin is of technical interest to beekeepers and others working on beekeeping subjects, and is available upon application to the department while the supply lasts.

Copper Sulphate for Sheep Worms

Method of Control Devised by Scientists Gives Good Results.

(Prepared by the United States Department of Agriculture.)

A method of controlling stomach worms in sheep devised by scientists of the United States Department of Agriculture and tested on farms for the last three years has given excellent results. The treatment consists in dosing the sheep once every 25 days with a 1 per cent solution of copper sulphate.

Losses From Worms.

Following good results at the department's experiment farm near Vienna, Va., the bureau of animal industry arranged with owners of 12 farm flocks in Schuyler county, Missouri, to try the method under ordinary farm conditions. At the beginning of the experiment, all owners reported they were experiencing serious losses from stomach worms.

While the experiment was in progress no change was made from the former usual practice of grazing, which consists in the use of permanent pasture throughout the year, except in the fall, when the flocks are allowed to run in fields and meadows from which the crops have been removed. During the last year no sheep or lambs under treatment were seriously affected by the stomach-worm disease.

Treatment Does Good.

The second generation of sheep which have developed under the copper-sulphate treatment are larger than their dams, have grown better wool, and have sold without culls. Buyers of feeder lambs from the dosed flocks have recognized their outstanding condition and paid top prices for them. These favorable results were observed among more than 2,000 sheep.

Full directions for using the treatment, which is comparatively simple, may be obtained on application to the bureau of animal industry, United States Department of Agriculture.

FOR NEURITIS

ASPIRIN

Proved safe by millions and prescribed by physicians for

Neuritis Colds Headache Lumbago
Neuralgia Pain Toothache Rheumatism

DOES NOT AFFECT THE HEART

Safe Accept only "Bayer" package which contains proven directions. Handy "Bayer" boxes of 12 tablets. Also bottles of 24 and 100—Druggists.

Aspirin is the trade mark of Bayer Manufacturers of Monoclonalacetic Acid of Salicylic Acid

Missouri Demonstration on Reducing Chick Loss

Thirty-two farms were used by the poultry department of the Missouri university last year in a demonstration of methods of reducing the annual losses in raising chicks. It is reported that these farms raised 88.7 per cent of all the chicks hatched. This was an unusually good showing as compared to a much heavier loss by farms which were not in the demonstration.

Early Spring Is Proper Time to Prune Orchard

Warm days during March can be profitably spent in renovating the fruit trees. Moderate pruning every year encourages annual fruiting and is much better for the tree than heavy pruning every three or four years. The work should not be delayed until growth starts in the spring.

Get Rid of Roundworms for Success With Pigs

Success in raising pigs will depend to a great extent upon proper housing and freedom from parasites, especially roundworms, says W. C. Skelley, assistant animal husbandman at the New Jersey State College of Agriculture.

The roundworms can be controlled by the following treatment. Withhold all feed for about 18 to 24 hours and for 50 pounds of live weight give a capsule containing 2 grains santonin, 2 grains calomel, and 5 grains sodium bicarbonate. In about 12 hours after giving this capsule feed a light soap containing a tablespoonful of epsom salts, well dissolved, for each 50 pounds of live weight. Repeat this treatment in about 14 days.

Does Not Pay to Grind Alfalfa Hay for Cows

Experiments conducted by the dairy husbandry section of the Iowa agricultural experiment station indicate that it doesn't pay to grind alfalfa hay when it is to be fed to dairy cows. At least it wasn't profitable in these preliminary tests. Eight cows were used in the experiment.

FARM FACTS

Corn, kafir, sudan, and cane seed should be tested for germination.

The old saying that a bushel of corn before a cow freshens is worth two bushels after freshening is true.

Milk is about 90 per cent water. The body weight of a cow is over 80 per cent water. To give a maximum of milk, cows must drink plenty of water.

Corn Good Animal Fuel During Severe Weather

Corn is cheap, about a cent a pound. One can get fine-burning soft coal for less than a half-cent a pound.

Animals are going to keep up their body heat during cold weather. They can do this with corn at a cent a pound if the owner can do some of it for them with coal at half the corn price.

INSIST UPON KEMP'S BALSAM for that COUGH!

Little Brother Speaks

Richard—Why should it be?

F. K. R.—Because sister said once that you were two faced, so you can see out of both windows at once.

CHILDREN CRY FOR FLETCHER'S CASTORIA

MOTHER:— Fletcher's Castoria is especially prepared to relieve infants in arms and children all ages of Constipation, Flatulency, Wind Colic and Diarrhea; allaying Feverishness arising therefrom, and, by regulating the Stomach and Bowels, aids the assimilation of Food; giving healthy and natural sleep.

To avoid imitations, always look for the signature of *Dr. H. H. Fletcher*. Absolutely Harmless—No Opiates. Physicians everywhere recommend it.

"Why, Uncle Jim! You look ten years younger!"

"When I saw you a couple of months ago, I made up my mind you were getting old. At least you looked it."

"Yes, Billie, and I felt old. No appetite, couldn't sleep nights—one day just like another, and none of them any good. I knew constipation was at the bottom of it, but it seemed the more laxatives I took the worse I got. Then one day I saw Nell giving Nujol to my little grandson. The doctor had prescribed it for the baby, but I found out it's just the thing for old fellows like me, too."

"I tell you, Billie, it keeps me feeling fine all the time. My appetite's back and I sleep like a child."

If I look any younger, Nujol gets the credit.

Nujol helps Nature in Nature's own way

Middle age brings on a decrease in the natural lubricating secretions in the intestine. Then you need Nujol. It supplies the deficiency of the natural lubricant. Medical authorities approve Nujol because it is gentle, safe and natural in its action.

Constipation is dangerous for anybody. Nujol is safe for everybody. Nujol simply softens the waste matter and thus permits thorough and regular elimination without overtaxing the intestinal muscles. It is not a medicine.

You can take Nujol for any length of time without ill effects. It should be taken regularly in accordance with the directions on each bottle. Unlike laxatives, it does not form a habit and can be discontinued at any time.

Ask your druggist for Nujol today and begin to enjoy the perfect health that is possible only when elimination is normal and regular.
