VARE AND BEIDLEMAN
 NOMINATED BY REPUBLICANS

From the best information at hand as this issue goes to press on Wednesday morning, William S. Vare and Edward E. Beidleman, candidates for United States Senator and Governor, were nominated by the Republicans.

In Centre county Pepper and Fisher led their competitors about four to one.

The Democrats in Centre county appear to have favored Judge Porter for Governor, and Wilson for United States Senator. The latter was the only candidate for the nomination for that office.

THE VOTE IN THE BOROUGH.

77 Democrats and 68 Republicans Record Their Preferences—No Votes for Vare—Scott Not Fully Supported.

The primary election on Tuesday was a quiet affair. Seventy-seven Democrats and 68 Republicans placed themselves on record. The outstanding results are that Vare did not get a vote, and Pinchot was a poor second. Scott, with no opposition, failed to get the full Republican vote. The result is as follows:

- U. S. Senator—Wilson, D. 77; Pinchot, R. 15; Vare, R. 0; Pepper, R. 43.
- Governor—Schiff, D. 23; Bonniwell, D. 11; Porter, D. 43; Beidleman, R. 8; Phillips, R. 0; Tener, R. 4; Fisher, R. 43.
- Lieutenant Governor—Hackett, D. 24; Walter, D. 49; Esterly, R. 4; James, R. 2; Clement, R. 6; Thompson, R. 4; Smith, R. 42; Hocker, R. 0.
- Secretary Internal Affairs—Murphy, D. 40; Cassidy, D. 35; Pilrinsky, R. 2; Godcharles, R. 6; Woodward, R. 48.
- Congress—Kreamer, D. 73; Chase, R. 56.
- State Senator—Betts, D. 74; Scott, R. 54.
- Assembly—Thompson, D. 30; Holmes, R. 57.
- State Committee—Redding, D. 65; Freeman, D. 8; Scott, R. 54.
- County Chairman—Zerby, D. 32; Freeman, D. 44; Fleming, R. 57.

"I can hear you! I can hear the world!" It was March 10, 1876, the day the telephone was born. Alexander Graham Bell visioned at that early day a nation-wide telephone service. But not even he could foresee the great modern long-distance switchboards which make one community of the state and the nation.

SPEEDING THE SPOKEN WORD

Two telephones as invented by Alexander Graham Bell would, if connected by wire and charged with battery, furnish simple intercommunication.

But that portion of the present telephone plant represented by Bell's invention comprises but about two per cent. of the whole.

The instrument on your desk is only the inbound and outbound terminal.

You measure its performance not in terms of the receiver and transmitter, or of the intricate switchboard mechanisms and circuits that lie in between it and the telephone you call, but rather in terms of the facility and dependability with which it responds to your directions.

That a local call shall be practically instantaneous, within the limit of machines and human hands to function, is not an unreasonable expectation.

That on average calls across the state or the continent relatively longer intervals are now required is probably understood.

Yet there is reason to expect that as time goes on, with the further development of operating equipment and methods now of practical use, the placing and completion of calls to distant point will more and more closely approach the facility and speed of local connections.

So great has been the recent improvement in these respects that comparison of 1926 with 1906 or even 1916 would make the accomplishment of those earlier years seem rather ordinary.

Only by such progress does telephone service keep pace with the increasing reliance which American business puts on it.
