That itch and burn, by hot baths of Cuticura Soap followed by gentle anointments of Cuticura Ointment. Nothing better, purer, sweeter, especially if a little of the fragrant Cuticura Talcum is dusted on at the finish. 25c each.—Advertisement.

## Explains Presence of Frogs in Solid Rock

Imagine one's surprise to crack open a rock and find a frog imbedded within!

That is exactly what happened recently at Okanogan, Wash. At Sydney, New South Wales, a similar occurrence has caused considerable speculation in scientific circles. At the latter place the frog was found in rock ages old, while, at Okanogan, workmen, digging into the cemented gravel of a roadway, stumbled on a number of live frogs imprisoned there, says Mentor Magazine.

It is the belief of science that it is quite possible for a frog to live without food within a rock for a period of years. The creature from the amphibian set depends on his mysterious resources of hibernation and lives on his own tissues. It is also thought that it is possible for a frog's egg to hatch in a crevice and that the acid from the body of the frog is powerful enough to eat a hole in the rock large enough to hold him for quite a while.

**Democratic Scandinavia**  
In Scandinavia girls share equally with the boys in the magnificent system of state education, and have equal access to all the professions and to all posts in the civil service. They are only partially excluded from the war services and the church.

## Tired, Lame, Achy?

Are you dragging around with a constant backache? Feel weak, worn and achy; so miserable you can't enjoy a moment's comfort? How about your kidneys? Well, kidneys filter off body poisons. But when the kidneys slow up, poisons accumulate and upset the system. Backache is apt to follow, with sharp pains, dizziness and annoying kidney irregularities. Don't delay! If you suspect faulty kidney action, use Doan's Pills. Doan's have helped thousands—are recommended the world over. Ask your neighbor!

**A Virginia Case**  
Mrs. Bettie Ray, field, 521 Mason avenue, Cape Charles, Va., says: "My back was sore and lame and the pains across my kidneys were so sharp and cutting, I could hardly drag myself around. I was always tired and weak, spells when little spots came before my eyes. I began using Doan's Pills. They soon rid me of the backache, and my kidneys became normal."

## CLEAR YOUR SKIN of disfiguring blotches and irritations. Use Resinol

**Airships and Great Guns**  
According to the occasionally reliable Moscow newspapers, the United States has the greatest military aviation service in the world. Russian newspapers now describe two American dirigibles, each mounting 20 cannons. The United States also has 14,000 military airplanes, according to the information on which the Russian commissar of war and navy bases his comparison to show the needs of the Soviet union. Though giant dirigibles capable of mounting 20 machine guns have not progressed beyond the drawing-board stage in the navy department designers' office, they have become an actuality in Russian newspapers that have printed pictures of them, cannons and all. "A country where peace is highly esteemed!" is the sarcastic line of explanation under the pictures.

Dr. Peery's "Dead Shot" not only expels worms or Tapeworm but cleans out the mucus in which they breed and tones up the digestion. One dose does it. Adv.

**Woeer From Afar**  
Some years ago when the last pair of white-tailed eagles were nesting in Scotland one of the birds died. There was not another eagle of that species in the country, yet within a few days the remaining bird had signaled her loss to a continental bird and it came over and they mated.

He makes friends who never made a foe.—Tennyson.

## Paper-Wool Twine for Tying Fleeces

Saving of 2 Cents Pound  
Made by Farmer on Wool  
Properly Prepared.

(Prepared by the United States Department of Agriculture.)

Although the wool trade has long complained bitterly against the use of binding twine in tying fleeces on the farm, the practice still continues to a large extent in many states, says the United States Department of Agriculture. The use of such twine is objectionable because small shreds cling to the wool and appear in the finished cloth, from which they can be removed only by expensive hand labor. The use of paper-wool twine manufactured especially for tying fleeces is advocated instead of sisal (binder twine), hemp, jute, or twine of similar fibers. One large wool producer reports a more ready sale and a saving of two cents a pound on wool properly prepared for market.

**Chaff and Straw Hurt.**  
Chaff and straw, allowed to get into the fleeces through carelessness in feeding, from unswept floors at shearing time, or during storage, also make fleeces less valuable and unattractive to the buyer, and sometimes results in a loss to the grower—an avoidable loss—of as much as ten cents a pound. The appearance of a fleece is also improved if rolled up and tied with the flesh side out. Twine of moderate size is best for tying, and not more than two strands each way is advisable. To withstand the strains of handling and shipping use bags in good condition.

The practice of branding with lead paint or tar is a great detriment because these materials will not scour out in the manufacturing process. Where branding or marking is necessary, as small a brand as possible should be put on and care taken not to slap it on carelessly. If the undesirable paint or tar brands have been used they should be clipped from the wool at shearing time and packed separately or thrown away.

**Desirable Marking Fluid.**  
A soluble marking fluid manufactured especially for branding purposes is most desirable and should be used in preference to common paint or tar. More attention to the details of shearing, handling, storage, and preparation of the fleeces for market would mean a general improvement in the wool of this country, and make it compare more favorably with most of the foreign wools imported for manufacturing purposes.

## Profitable Practice in Sweet Clover Culture

A profitable practice in sweet clover culture is that in which the clover is sown with the oats in the spring. As soon as the oats crop has been harvested, the clover takes on a rapid growth and soon furnishes a valuable hay crop. Soon after the hay has been made, the crop furnishes fall pasture and can be turned under early the next spring in time for a corn crop. A rotation such as this furnishes three crops—oats, sweet clover hay and corn—as well as fall pasture, in two years. In addition the system furnishes a legume every other year for soil improvement. The oats must be cut high enough so as not to injure the on-coming clover.

## To Prevent Sheep Worms

It is most important to keep sheep and lambs as free from stomach, and other worms, as possible. To accomplish that the ewes should be treated for expulsion of worms during summer and again before being bred, and when the lambs come, the ewes and their young should go to new seedling and should have a "fresh bite" of grass at short intervals during the entire period of grazing. Especially try to keep ewes and lambs off low, wet permanent pasture.

## FARM NOTES

Give your chicks a good start and they will repay you with a good finish.

Everybody has an income of 24 hours to spend each day. Do you budget yours?

Sunlight is the cheapest and best disinfectant for use in the poultry flock.

Under good husbandry there would be no "marginal" land; if it can't grow field crops, or furnish pasture, let it grow tree crops.

One eternal triangle is commendable. It has for its vertices the farmer, the banker, and the farm bureau in the dairy community.

Sweet clover makes an excellent pasture and should be used more generally for this purpose. Sweet clover is also one of our best soil-improvement crops.

If it is impossible to use new ground for the chicks it is well to thoroughly clean up the old ground and sprinkle lime plentifully in order to kill as many of the bacteria as possible.

Hogs are the most efficient domestic animals found on the farm, since they will consume a greater diversity of feeds than other animals and since they will convert this feed into more pounds of meat.

## Good Shelter Given Pigs Helps Growth

Farrowing Pen Must Possess  
Many Good Qualities.

Many hog raisers have found that the farrowing house has much influence on the success of raising young pigs to maturity. The New Jersey State College of Agriculture enumerates several qualities that a good farrowing house must possess. They are warmth, air, isolation, sanitation, safety for the pigs, and nearness to pasture. These features may all be combined in a portable farrowing house built for one sow and her litter.

The individual portable house is small enough so that the sow can keep warm with her own body heat, yet it can be ventilated by completely opening the front in warm weather. Safety for the young pigs is provided by isolating the sow in a separate small lot or pasture so she will not be disturbed by other animals. Clean, sanitary soil is also obtained by the use of this portable house. The house, being small, can be thoroughly cleaned and sterilized before farrowing time and moved to fresh pasture whenever desired. Guard rails of 1 1/2-inch pipe are fastened to the walls for the safety of the very young pigs. These should be 8 inches above the floor and an equal distance from the wall.

Plans for such a portable one-family hog house may be obtained without charge from the agricultural engineering department, New Jersey State Agricultural college, New Brunswick.

## Silage Very Convenient Feed for Dairy Farmer

Among the many different advantages of a silo for the average dairy farmer are the following:

1. In a silo all the corn crop is saved for feed. When not stored in a silo 40 to 50 per cent of the crop is lost.
2. Silage has a beneficial effect on the digestive system and therefore is worth more than its feed value alone.
3. Silage furnishes a succulent feed during the winter when there is no grass.
4. More feed may be stored in a smaller space and at less cost than any other way.
5. Silage is convenient to feed and is a cheap roughage.
6. The silo can be built during July when farm work is slack.
7. The dairy farmer who waits until August to think about building a silo usually does not have one.
8. Join with your neighbor to buy a silage cutter.
9. If a concrete silo is built it should stand at least a month after completion before being filled, to insure proper setting.
10. Ten milk cows or their equivalent in young stock—two yearlings equal one cow—justify a silo.
11. Japanese seeded ribbon cane makes nearly as good silage as corn. On most lands a greater tonnage of cane is secured.
12. Corn should be about fodder-pulling stage when cut for silage. Cane should be ripe enough to make strip.

## New Edition of Feeding Handbook Just Issued

The "Handbook for Better Feeding of Live Stock" which has experienced a very wide demand since its issuance by the United States Department of Agriculture two years ago, has been reprinted in a revised edition. The new edition contains numerous photographic illustrations of feeding practices and presents some new text embodying late information. The handbook is intended especially for farmers who desire a handy-sized book with reference tables to be followed in feeding the various classes of farm animals. Persons having special problems are invited to apply for feeding-question sheets. These sheets are convenient blanks for describing problems in a manner which insures the most definite answers by federal and state specialists who analyze the problems and answer the questions.

## Minerals Are Desirable for Chickens in Mash

Minerals are desirable for chickens the same as for the various kinds of farm animals. The most satisfactory method of supplying minerals is to add 5 per cent of bone meal and 5 per cent of ground shell to the poultry mash; there are other minerals that are being used for chickens but this method will take care of most flocks very nicely. Horses do not need minerals the same as other live stock for they are not used for artificial production of food products; that is they are not developed to produce large amounts of milk, like the cow, or any other product, all they do is grow and work; one-fourth pound of special deodorized steamed bone meal would be very good for each horse daily during the winter months.

## Soy Beans as Cow Feed

Results of recent experiments conducted at the South Dakota State college indicate that ground soy beans can be fed with profit by dairy farmers for the high protein feed, thus decreasing the cost of milk production materially. Furthermore, in these tests, ground soy beans proved as palatable and seemed to have as desirable physiological effect on the cows as linseed oilmeal.

## If you want to buy a car on time

It is to your advantage to buy the car that you can comfortably afford, on a payment plan that gives you a sure margin of safety.

General Motors has its own finance company, the General Motors Acceptance Corporation, operating the GMAC Plan. Through its service more than 1,000,000 families have purchased cars comfortably out of income.

On August 1 last, the price of this service, which had always been low, was further reduced. And the automobile-buying public is now saving millions of dollars annually as a result of this reduction and the influence of General Motors' leadership.

The purchase of automobiles on time is a universally accepted practice. The car is a utility and it is sound business to conserve capital and use credit. But buy on sound terms and at low rates. Any General Motors dealer will explain the advantages of the GMAC Plan.

## Fly - Flit - Flop!

FLIES breed in filth, feed on filth and bring filth into your home.

Flit spray clears your home in a few minutes of disease-bearing flies and mosquitoes. It is clean, safe and easy to use.

### Kills All Household Insects

Flit spray also destroys bed bugs, roaches and ants. It searches out the cracks and crevices where they hide and breed, and destroys insects and their eggs. Spray Flit on your garments. Flit kills moths and their larvae which eat holes. Extensive tests showed that Flit spray did not stain the most delicate fabrics.

Flit is the result of exhaustive research by expert entomologists and chemists. It is harmless to mankind. Flit has replaced the old methods because it kills all the insects—and does it quickly.

Get a Flit can and sprayer today. For sale everywhere.
