FARM CALENDAR

Timely Reminders from The Pennsylvania State College

Cut Grass More Easily—Choose a cloudy day, when possible, for cutting the lawn. When the sun is not shining the grass yields more easily to the mower knives. At the same time, it can be cut closely without scorching.

Keep Poultry Houses Cool—Keeping the poultry house cool in summer is a problem with many poultrymen. This is just as important as keeping it warm in winter. The poultry house recommended by the Pennsylvania State College specialists provides for plenty of ventilation with practically no draughts.

Dairying Helps Fertility—Dairymaking conserves fertility as about three-fourth of the fertilizing elements found in a dairy cow's feed are voided in the solid and liquid manure.

Use Gardens Again—Despite the late, cool season there is already room in many gardens for second plantings, where early radishes, lettuce, spinach and scallions have been removed. Make use of the garden space by planting succession crops of suitable vegetables.

Keep Strawberries Growing—Thrifty strawberry plants, well cared for, will develop into a full row of runner plants by fall, and the size of the crop next spring will be governed largely by the stand of plants secured this year.
