One Death Per 1000 Autos in a Year Is Record of U. S.

1 Person is Killed and 28 injured annually for every 1000 Automobiles in this Country

ONE out of a thousand is the relationship between the annual automobile fatalities and the number of motor vehicles in this country, according to the Stewart-Warner Safety Council for the prevention of automobile accidents, which has undertaken a strenuous campaign of automobile safety and accident prevention.

And for every fatality there are at least 28 accidents serious enough to get on record. This does not take into consideration minor sprains and bruises or people suffering from nervous shock as the result of being in an automobile accident.

To appreciate what a vast army of killed and injured is annually conscripted by the reckless motorist and careless pedestrian, a comparison may be made with American casualties in the great war. Over a third as many people are killed annually by the automobile as there were American soldiers killed on the field of battle during the entire war, while the number injured each year is nearly three times as great as the number of our boys who were wounded throughout the war.

Cow Uses Four Stomachs to Digest Its Daily Food

ALL the four stomachs of the dairy cow must work as a unit if she is to produce the most milk year after year, states the Larrowe Institute of Animal Economics. The first stomach serves as a storehouse for bulky feeds and the second as a separator room, while the third stomach acts as a wringer to squeeze out water from the food, leaving it in a mealy condition, ready for the fourth stomach, where real digestion begins.

How the four stomachs, backed by a plentiful supply of well-balanced feed and pure, fresh water, can be made to pay big profits, is well illustrated in the official cow-testing association record of Sadie, the world's second highest record grade cow. In one year through the stomachs of this piebald daughter there passed 6,803 pounds of a prepared dairy ration, 777 pounds of dried beet pulp, 2,133 pounds of mixed clover hay and 5,182 pounds of corn silage, which were turned into 21,680 pounds of milk—enough to fill over 10,000 quart bottles! In other words, for every pound of grain entrusted by Sadie to her quartette of stomachs, they repaid with three pounds of milk in the bucket.
