**FARM CALENDAR**

Timely Reminders from

The Pennsylvania State College

Potato Aphids—Possibility of great losses to the potato crop of Pennsylvania is seen in the increasing numbers of potato aphids found in many sections of the State. They are green, soft bodied, sucking insects which at certain stages are also pink in color.

They are showing in sufficient number as to indicate a possible general outbreak. Watch for them. If they appear, add one pint of nicotine sulphate to 100 gallons of Bordeaux spray. The spray must be applied thoroughly, making sure that the tips and under sides of the leaves are covered.

**Dobbin Likes Clean Collars.**—Don't forget to take good care of old Dobbin's shoulders as the hot weather grows hotter. Be sure the collar fits without being "bushed" with a series of pads. Keep the face of the collar free from dirt and hair. Wipe it off at night with a cloth. Scraping with a knife will roughen it.

**Pullets Need Air and Room.**—Growing pullets need plenty of room and fresh air if they are to continue to develop normally. Opening the colony houses and putting in plenty of perches will give plenty of fresh air and sufficient room for the growing pullets.

**Water the Porks.**—Many hogs suffer from lack of water during the hot, dry days of summer. If the swine are watered in open troughs, these should be filled with fresh water several times daily. A cheap and efficient watering device may be made by attaching an iron trough, with float valve, costing about three dollars, to an old vinegar barrel.
