

**No Private Weddings**

When people are married in Brazil everybody may come to the wedding. Weddings and funerals are public functions in that republic. Officials arrive before the hour and open all the doors and windows of the home, indicating the ceremony is open to the public. A long procession from the home of the bride to the church is an important part of the ceremony. The longer the procession the wealthier the bride or bridegroom. Same way with funerals.—Capper's Weekly.

"THE JUNIOR TEXT BOOK" for an Up-to-Date Church. A Most Helpful Book. 25 cents. Address the Author, W. H. KERR, Great Bend, Kansas.—Adv.

Mountains are the beginning and the end of all natural scenery.—Ruskin.

**INSPECTING MOTOR "COOLED BY STEAM"**

An invention which will keep a motor cool by steam and which, it is claimed, will revolutionize the automobile and airplane industries, was demonstrated to the members of the house military affairs committee at the Capitol by Lester P. Barlow, its inventor (shown on the left). This invention, the rights of which have been offered to the United States, will keep a motor operating at exactly the same temperature under all conditions, according to Mr. Barlow. In the center of the group with paper in hand is Representative W. Frank James of Michigan, chairman of the committee.

**CHECK YOUR CAR ON GAS MILEAGE**

The next hundred-mile trip you take it would be well worth your while to find out how much gas was used and the miles you traveled per gallon. This will give you a chance to compare the mileage you are actually securing with that which you should be getting.

Perhaps you may find that your gasoline economy is as high as can be expected from the particular car you are driving, but, on the contrary, you may discover that your car is using far more fuel than it should and is thus proving unduly expensive.

**High Gasoline Mileage.**  
How high gasoline mileage you should be securing can best be ascertained by inquiring of a number of other users of identical cars as to their mileage per gallon, and by asking the local representative of your make of car how many miles your car ought to be expected to do, on a gallon, on a 100-mile run under ordinary conditions.

Some of the figures you thus get may be exaggerated or in error, but by considering only those from sources you feel are reliable you will obtain a pretty accurate idea of what degree of fuel economy a car like yours ought to show.

**Expected Gas Mileage.**  
Just as a hint as to the expected gas mileage of various cars of recent design, it may be said that mileages from 18 to 24 are attainable with four-cylinder cars of moderate weight, mileages of 14 to 18 with sixes of ordinary weight and of 10 to 14 with eights. These figures are mere approximations, and would doubtless prove incorrect for many makes and models, but they represent what may be called "educated guesswork."

If you feel that your car uses considerably more gas than you decide it should, judging from the testimony of other users and from general considerations, based upon the cylinder number of its engine, the car weight, weather conditions, and so forth, it is up to you to find and remove the causes of its fuel losses, if you care anything about economy of operation.

**Don't Motor Over Grade Crossings in High Gear**

Despite the oft-repeated warnings about the dangers of crossing railroad tracks, thousands of people are killed and injured every year in automobile accidents at grade crossings, says C. E. Pettibone, vice president of the National Safety Council.

It is advisable never to cross a railroad track in high gear. Many accidents happen because cars become stalled while on the track. It is safer to shift into intermediate or low gear a reasonable distance before crossing a track.

If your view is obstructed, or if required by law, come to a full stop before crossing; otherwise slow down to 15 miles per hour.

All crossings require your careful attention, whether guarded or not; crossing bells are sometimes out of order; watchmen or gate operators may be off duty.

Be especially careful at crossings where there is more than one track. Do not cross directly behind a train that has just gone by. Another train may be coming in the opposite direction on the next track.

A train running 40 miles an hour goes 59 feet in one second and cannot be stopped in less than about one-quarter of a mile. An automobile running 25 miles an hour can be stopped in 58 feet. Which should stop, look and listen at railroad crossings, the train or the automobile?

**AUTOMOBILE HINTS**

The road hog is no respecter of persons, not being one himself.

Automobile parts and accessories showers are latest for brides.

On the approach of fire apparatus drive as near the curb as possible and stop.

At least the automobile has no tail to get over the reins and cause a run away.

The fact that the grade crossing is in plain sight doesn't seem to mean anything.

Did you ever notice that where you didn't park your car you could park as long as you please?

If the truck driver is a real gentleman he will smile pleasantly when he splashes you.

One in every six has an automobile thus showing that motor cars are running pyrrhica a close second.

Do not park within 15 feet of a fire plug, or in front of a mail box, or within 25 feet of an intersection.

**Prolong Period of Sire Service**

Beneficial Effects of Exercise Have Been Proven by Tests.

(Prepared by the United States Department of Agriculture.)

Dairy bulls at Beltsville, Md., have been put on a daily regime calculated by specialists of the bureau of dairy industry, United States Department of Agriculture, to prolong their life of usefulness in the various breeding projects under way on the experimental farm. Systematic exercise and the feeding of sprouted oats are two of the most important features of the plan.

**Advocate Exercise.**  
Investigations in the past have proved the beneficial effects of exercise in maintaining the health and fertility of bulls, and the practice has been consistently advocated. The feeding of sprouted oats to bulls is in line with the beneficial results this feed has shown in correcting breeding difficulties in cows and virgin heifers.

Sprouted oats supply the so-called vitamin E, a shortage of which is often held responsible for abnormal functioning of reproductive organs in various kinds of animals.

The special need for determining the best methods of handling dairy bulls to maintain their potency for many years is a result of the "proved sire" idea recently brought into favor. Proved sires are those whose daughters have been tested in sufficient numbers to indicate a consistent ability on the part of the sire to transmit high production. Such proof obviously cannot be obtained until the sires are older than the average dairy bull.

**Test Fertility.**  
Five of the bureau's herd bulls are over eight years of age and average ten and one-half years. One is fifteen years old and continues an active breeder. Several young bulls are being fed experimentally to test the effect of rations on fertility, and two older bulls are now being examined to determine the effects on fertility of excessive service, lack of exercise, and close confinement.

**Bovine T. B. Eradicated at Much Increased Rate**

The number of cattle tested for tuberculosis in the country under government and state supervision during the fiscal year ended June 30, 1929, was 24 per cent more than for the preceding year, according to the United States Department of Agriculture.

Nearly every phase of tuberculosis-eradication work showed an increased activity during the year. Though the accredited-herd plan of combating the disease was conducted in all the states, general preference was given the area project which provides for the testing of all cattle in a county. Under this plan over 6,500,000 cattle were tested, or over 1,500,000 more than during the preceding year.

Of noteworthy interest in connection with the tuberculin testing under both accredited-herd and area plans was a survey to show the present estimated extent of the disease. The survey showed the probable extent of the disease as 2.8 per cent, meaning that on an average 28 cattle out of every 1,000 in the United States are tuberculous. In 1922 the estimated per cent of infection was 4 per cent.

**Sweet Clover Valuable in Building Up Soils**

The value of sweet clover as a green manure or soil builder is becoming more and more apparent. Those interested in soil conservation and building have had remarkable success with the use of corn, wheat and sweet clover in a two-year rotation. The inoculated sweet clover is sown in the spring on the wheat. After the wheat is harvested the clover occupies the land for the remainder of the season. The next spring it makes a rapid growth, and during the latter part of April is plowed under and the land prepared for corn.

At the Missouri College of Agriculture it has been found profitable to fertilize the land with about 100 pounds of acid phosphate to the acre. Where the phosphate is added the amount of green clover ready to turn under was about five tons per acre against three tons per acre where no phosphate was used.

**FARM NOTES**

The supply of good seed corn for this spring apparently will be small.

Cabbage is rich in the green material needed by laying hens. About six pounds of cabbage may be fed per hundred birds per day.

Unthilled sweet clover seed can be sown in the winter time but if it has a germination of more than 50 per cent it is usually unsafe to seed until spring.

Most farm machinery goes to the scrap heap after it has been used only 50 to 100 days while railroads use a locomotive 25 years or more.

Milk or cream should be cooled to not less than 50 degrees F. within a few minutes after it is drawn or skimmed. This temperature should be maintained.

**Fresh strawberries and SHREDDED WHEAT**

A new thrill for your palate  
New health for your body  
Give yourself this treat today!

There's nothing like this for breaking up colds—amazing relief to sore throats, head and chest—Safe—Money back. 30 cents at all druggists.

**Growing Mining Industry**

The mining industry of Alaska is going ahead rapidly and will increase in leaps and bounds when the facilities for getting the mined material out of the country are increased, as they undoubtedly will be in the near future, which will result in cutting the cost of transportation. Last year the total value of the production was \$18,220,602, while that of the previous year was \$17,457,333.

A woman's mission on earth is to convince some man that he ought to get married.

**DEMAND "BAYER" ASPIRIN**

Aspirin Marked With "Bayer Cross" Has Been Proved Safe by Millions.

Warning! Unless you see the name "Bayer" on package or on tablets you are not getting the genuine Bayer Aspirin proved safe by millions and prescribed by physicians for 26 years.

Say "Bayer" when you buy Aspirin. Imitations may prove dangerous.—Adv.

**Might Even Get Mushy**

"Soft light in the home would assist in preventing divorces," says a writer. And soft speech is even more effective.—Boston Transcript.

**Cramps and Colic Caused Near Collapse**

Baltimore man had weak spells; liver, kidneys and stomach out of order. Now feels "like a fighting cock" and gives full credit to Tanlac

J. J. Holland, a respected Baltimore citizen went through a two-year siege of ill-health. In his home at 1711 Jackson Street he spoke frankly and emphatically of his experience. "Stomach trouble brought about a terrible condition," he said, "and I was ready to give up hope of recovery. I had cramps and colic at frequent intervals, and so acute was the pain that I had to lie down wherever I happened to be.

"Irregular eating hours were probably the cause of my acute indigestion. My liver and kidneys went out of order, too, so that I was nervous, and felt played out all the time. Loss of restful sleep made me very irritable towards all around me.

"I noticed that the pains in my stomach stopped before I was through with the first bottle of Tanlac. By the time I finished the sixth my appetite and digestion were perfect and all the distressful symptoms had gone. Best of all, they've stayed gone, for that is six months ago and I've felt like a fighting cock ever since. I eat and sleep normally again and go through my work without tiring.

"In fact, I seem to have a brand new stomach and liver as well as a new set of nerves. I'm a happy man again and wouldn't take a new automobile for what Tanlac has done for me. And that's saying a lot! My wife is using Tanlac now, and it's helping her, too."

This world-renowned remedy is nature's own tonic and body builder, made from herbs, roots and barks. If your health is low, if you're not feeling up to the mark in every way, start in on Tanlac without delay. Your druggist has it. Over 52,000,000 bottles already sold.
