**FARM CALENDAR.**

**Timely Reminders from The Pennsylvania State College.**

**Plant Some Trees**—Did you plant trees along streets, on school grounds, on eroded lands, or in open spaces in the woods during American Forest Week? If not, you may still do this important piece of service for mankind.  
**Keep Cows Clean**—During the spring months dairy cattle should be curried daily. This will help in removing the old hair and will keep the hide in a good healthy condition.  
**More from the Garden**—Replant garden space with succession crops as soon as it is made available by the harvesting of early vegetables.  
**Free Lawn from Weeds**—Keep the lawn free from dandelions and weeds. A few minutes of work each day saves hours later.  
**Sterilize Milk Utensils**—Milk utensils should be sterilized. This not only kills bacteria and makes utensils sweet and wholesome but they also dry quickly, which prevents rusting.  
**Clip Grass Now**—Start cutting the grass before it gets too long. Clip it often during the heavy growing period. Short clippings will never have to be raked up.  
**Milk to Feed Poultry**—When one must buy a milk product, it will be worth while to consider dried milk, either skim or buttermilk. One of

these products can be mixed with the mash and is not so likely to attract flies as is the liquid milk. Keeping milk containers clean is one of the poultryman's problems.

**NASH**  
*Leads the World in Motor Car Value*

There is a DIRECT force-feed oil line to each and all of the 7 bearings and to the cylinder walls to guarantee positive lubrication.

**Nash 7-bearing crankshaft takes longer to build—costs more**

It takes longer to build a 7-bearing motor than it does to build one with only 3 or 4 main bearings.

Obviously, it costs more in time and money to build the Nash 7-bearing crankshaft.

There are at least 3 more bearings to hone and polish. (Nash has considerably more bearing surface than other six-cylinder motors in the Nash price field with 4-bearing crankshafts.)

Why then does Nash build it, when other manufacturers still use engines with fewer bearings?

There are at least 3 more bearings to align. And there are at least 3 more bearings to check for proper clearances.

The answer is that Nash owners have come to expect Nash to be definitely better than any other car they could buy at the Nash price.

But the Nash 7-bearing crankshaft eliminates the "whip" which loosens bearings and piles up expensive shopwork on motors with fewer crankshaft bearings.

And 7 bearings alone produce superlative power-smoothness and power-quietness.

Before you select your new motor car, drive a Nash and see how smooth it is at high speeds, how powerful and effortless its pick-up at every speed.

[The Nash Price Range on 26 Different Models Extends from \$865 to \$2090 f. o. b. factory]
