NEW SAFETY DEVICE FOR DRIVING UP HILL

The photograph shows the new invention for safer driving, the leg accelerator. When the driver goes uphill or through dense traffic he can keep his foot on the brake and at the same time manipulate the accelerator with his leg. When not in use, the leg accelerator telescopes under the dash,

CHOOSING COLOR **OF IMPORTANCE**

Appearance Changed by Using Dark Tones Above Light on Some Models.

Most persons are a little afraid of color. That is to say, any color that is at all bright and alluring. Perhaps It is just as well for the peace of mind of the general run of humanity that such is the case. Otherwise, if we ran riot with the shricking pigments that sometimes seem to fit our mood, the world would look like a madhouse. And yet, color is one of the greatest delights of our lives, whether we know It or not.

There is no better way to judge the good taste of the average man and woman than by the colors of their automobiles. The colors of the cars when they come from the factory are the result of careful thought and experiment. But they are, of course. only a few of the possibilities. That is why you can almost always tell a car that has been refinished. The owner has not been bound by the colors of the manufacturer.

Combinations Discussed.

It is not generally appreciated that color either lives or is dead with perfect relation to the other colors the

Test Dairy Herd **Every Two Months**

Owners May Obtain Many Benefits of Association Work at Lower Cost.

(Prepared by the United States Department

of Agriculture.) Dairymen owning small herds may obtain many of the benefits of assoclation testing at a lower cost per cow than would be obtained by the regular dairy herd improvement association method. This fact is brought out in Circular 1-C entitled "Testing Cows for Production Every Other Month," by Dr. J. C. McDowell, dairy husbandman of the United States Department of Agriculture. As the title suggests, the method involves testing every other month, or six times a year, instead of every month or 12 times a year, as in the regular association. In other respects the two methods are alike.

Figures Used in Study.

The figures used in the study on which the circular is based were those from a herd of 70 cows at the Minnesota agricultural experiment station, and included the day-to-day milking records for the year. With these figures as a basis, the feed, production and income records were calculated for six test days, and the errors were computed by comparison with the actual figures for the year. The average error due to testing one day in two months was 3.8 per cent as compared with an average error of 2.91 per cent in monthly tests. In 24 cases out of 70 the error was 5 per cent or more, as compared with 16 cases out of 70 in the monthly method. The greatest error was 12.5 per cent, as against 8.3 per cent on the monthly basis.

Where Herds Are Small.

The circular concludes: "It is not expected that the method of testing every other month will take the place of the regular dairy berd improve-

The circular may be obtained by writing to the United States Department of Agriculture, Washington,

Mounting Corn Shellers

on Automobile Trucks Custom corn-sheller owners are mounting their shallers on automobile trucks. The sheller is operated by a power take-off arrangement from the transmission of the truck. Must Prepare Early for Spring Garden

First Thing Is to Secure the Necessary Amount of Seed.

Those who plan to have a garden next spring should begin to think of it now. First, a decision must be made as to whether a garden is wanted sufficiently to give it attention. Next, the garden plans need to be made, for when the spring weather comes, the gardener who is prepared to plant is the one who will get the early vegetables.

"To make plans for the garden, look first to the seed supply," says Robert Schmidt, vegetable specialist for the department of horticulture at the North Carolina State college. "Seedsmen are now getting out their spring seed catalogues, which may be had for the asking. Place an order so that sufficient seeds of the right varieties will be on hand when they are needed for planting. If any seeds are left

over from last year, they should be tested for germination to see if they are still viable. This can be done by placing a few seeds between moist blotting paper or cloths and keeping them in a warm place for a few days. "For an early garden pick out a light, sandy piece of ground. A clay loam soll will be best for summer and fall. It is not to be supposed that good vegetables can be raised on a poor soil. Well-rotted stable manure is the best fertilizer for a vegetable garden. If the soil is in good condition and contains plenty of humus, high-grade commercial fertilizers may be substituted for the manure. Get

California Has Claim to Heaviest Rainfall

Up to the time of this writing, the world's record rainfall was observed in a district on the west front of the San Gabriel range, a writer in the Kansas City Times says. Here, on April 5, 1926, a fall of 1.02 inches in one minute was measured on a weighing rain gauge and was report ed by the United States weather bureau and the Los Angeles county flood-control commission, joint operators of the observation station. By chance, a second gauge of the same pattern had been installed near the other, for test purposes, and as both Instruments made the same record additional testimony of its accuracy was afforded. The previous fainfall

tion, St. Louis is the only one in which the number of motor vehicular fatalities showed a decrease the first seven months of 1927, as compared with the same period of 1926, it is pointed out in a recent survey issued

council. The survey states that there has been a 29 per cent decrease in St. Louis, with a fatallty record of 14.8 for each 100,000 citizens, which is unusually low, as compared with other large cities.

to Show Less Fatalities

Among the larger cities of the na-

St. Louis Only Big City

Records of motor vehicular fatalities which are maintained by St. Louis police show that to date there have been 85 deaths this year from motor vehicular accidents, as compared with 118 for a similar period in 1926. This is at about the same ratio

as the number of deaths the first seven months, the period covered by the National Safety council's survey. The survey points out that the antumn months ordinarily are the worst of the year, in so far as the number of traffic fatalities are concerned. The number of deaths from motor accidents in the nation generally was considerably greater the first seven months of this year as compared with last year.

are used with it. For instance, black is somber and uninspiring. With vermilion next to it, it suddenly lives and breathes. Combine it, however, with the cold glacial feeling of the various blues and it retires within itself and ceases to delight us.

Suppose the woman who will often drive the car has red hair. There is then no question but that she has certain subconscious likings for some tones of green. We may not realize it but these tones are direct complements of red and help to accentuate its beauties. As it is logical to clothe the body in colors that enhance its various physical attractions, so it is also logical to carry the idea further and surround your home and your car with colors that bring out your own Individuality

Have Dafinite Idea.

So, in refinishing your car, it is better to come to the refinishers with a definite idea. Choose some colors that are mostly friendly to you. These colors are to be had, because the best of them are now formulated from the newest tones of the times and follow the Paris and New York modes in silks. They are the ones that will satisfy you because they are the onca you are used to wearing.

Cutting Glass With Shears ls Not Difficult Task

Often in working around the automobile or radio or in home repairing it is desirable to cut glass in a curve or glass that is too thin for ordinary cutting methods. In such cases it is very helpful to put both the glass and the siears under water, says the Michigan Farmer, Apparently the water absorbs the shocks and vibrations and prevents them from extending into the glass and shattering it. One job on which this will be found useful is in cutting a headlight lens down so it can be used on a smaller headlight. If possible the glass should first be scratched on the proper circle with a cutter or diamond. Be sure to practice on some waste pieces until you get the proper hang of using the shears.

Time-Payment Plan

"If there were a million people in France buying automobiles on the installment plan that country would be far more happy and prosperous than it is." says Alfred Reeves, general manager of the National Automobile Chamber of Commerce. Reeves believes that installment buying is sound economy for purchases over ment

Give Extra Protection to Bees During Winter Preservative for Wood

Bees should get extra protection during the winter months. It should be applied as soon as frost destroys the food supply. It is well to make sure that the bees have plenty of honey to carry them until the next sea-Excepting where winters are severe

no particularly elaborate precautions need be taken, writes C. W. Rapp of Arkansas in Capper's Farmer. In an extra super, set on top of the stores. a sack full of leaves or straw should be placed. Care should be taken to leave plenty of room for the bees to pass from comb to comb from above. Reducing the size of the front entrance also will tend to make the hive warmer.

Protection for the hive proper may be obtained by fencing around all but the front of the hive with low chicken wire. The space between the hive and the wire should be filled with leaves, straw or hay. Protection from the north is desirable, and the hive should be facing some other way.

Orchard Sanitation Is

Very Important Factor It is very difficult to control brown

rot of peaches and worms that get into peaches on trees that may be located near wild plum thickets or other peach trees not well cared for in the way of spraying. In other words, general orchard sanitation is a very important factor in the control of in sects and diseases in any peach or-

chard. One can do a great deal toward reducing brown rot by watching for the cankers or diseased spots on the small twigs and cutting them out when the trees are being pruned in the winter. It is also important to remove and destroy all decayed or mummled fruit from the trees and from the ground near the trees.

If there are any wild plum thickets near your peach trees you will find it very difficult to control the curculio which causes wormy peaches as this insect breeds in wild plums as well as in peaches.

record was observed in Panama. On November 29, 1911, a fall of 2.47 inches was registered in three minutes at the weather bureau station in Porto Bello.

One Out of Five

"One of every five persons in United States owns an automobile," according to figures printed in Barron's Financial Weekly. "A world survey shows a car to every 66 persons." reads Barron's. "About 95 per cent, or 27,050,-267. of all cars registered were of American manufacture. Canada and Hawaii rank second to United States in proportion of population owning automobiles, with one in eleven persons. New Zealand has 1 for every 12: Australia and Denmark 1 to every 17; United Kingdom 1 to every 43; Argentina 1 to every 45, and France 1 to every 46. India, with 1 to every 3,893 persons, has the smallest proportion among the first 25 motorized countries."

After one has moved eighteen times, he doesn't care what is the pattern on the wall paper.
