FARM CALENDAR.

Timely Reminders from The Pennsylvania State College.

KEEP PULLETS CLEAN—To prevent pullets from becoming infested with worms, place the birds in a clean laying house away from the bare contaminated range. Satisfactory results cannot be expected from worm treatment unless the birds are taken away from the ground where there is infestation.

CONTINUE SPRAYING—Do not stop spraying potatoes now or the late blight will shorten the growing period. Many farmers find that the yield is increased 25 bushels an acre each week in which growth can be extended at this time of the year. Increased profits are the result of consistent spraying.

KNOW YOUR LIME—Be sure you know the difference between the various kinds of lime on the market. The law requires that the analysis of each kind be made public. Ask the county agent to help you to determine what you are getting for your money. It is a question of interpreting the analysis in terms of the actual active agent in the form of lime purchased.

CONTROL WHEAT SMUT—Stinking wheat smut is the worst disease of wheat in this state. Last year it destroyed 1,400,000 bushels of grain for Pennsylvania farmers, besides inflicting losses through dockage of smutty wheat. Two and one-half ounces of copper carbonate dust will treat a bushel of seed. It is better to control than to pay smut toll.
