PIANO OWNERS!

If your piano has not been tuned and overhauled within a year, you should immediately investigate the matter.

The treble half of your piano may have gone below pitch. That causes an enormous increase of strain on the bass end, unbalancing the 18 tons of tension in the piano with a possibility of bucking and breaking the metal plates—an injury that costs you around \$100 to have repaired. Tuning is a form of piano insurance that prevents this and many other possible injuries caused by lack of regular attention. For your piano to last from 40 to 50 years it must be tuned regularly at least once a year.

Then think of the joy and satisfaction of knowing that when your piano is tuned and restored to its crystal clarity, its sparkling brilliance, and perfect harmony, it will delight your visitors and cultivate correctly your children's musical sense.

Your player piano can not give perfect satisfaction unless it is in perfect mechanical condition. Have it overhauled.

Perhaps moth or mice have gotten into your piano—either can ruin the piano in less than three months time. Only a qualified piano tuner and technician can detect and prevent this.

Expert piano and player-piano tuning, regulating and repairing service is available to you during the summer months at a very attractive price.

Have the work done by a person within your community—someone you know, so that if a recall is necessary, the tuner is available.

The coupon below will be accepted as 25c cash toward having your piano tuned if your order is placed between May 15 and August 15, 1929. Not more than one coupon applicable on any one piano.
