She is very much pleased with hospital work and feels she has made no mistake in the selection of her profession.

The wheat crop has already been cut on many farms in the valley, and on the remaining farms the crop is ready for harvesting. On nearly all of the farms the crop is good, and on many it is the best in some years. The stalks stood straight up to the time the modern binder cut and bound them. This made harvesting more speedy and afforded pleasure. The wheat heads seem well filled with plump berries, and in a short while we will hear of big yields per acre.

The probable drowning of three local children was averted by Philip Smith and Alice Foust, a few days ago, at Red Mill dam, south of here. Mary and Anna Allen and Freda Burkholder conceived the idea of protecting themselves against the perils of deep water by surrounding themselves with an inflated tire tube. The tube drew the three children closely together, and when deep water was reached there was a scrambling within it—the struggle of the survival of the fittest, which in this case proved to be Freda. The cries of distress brought to their rescue the two companions named, who pulled them to shore. Miriam Mitterling, who was a guest of Freda's, and several other children were also nearby but lacked training in swimming and were obliged to gasp and await results on shore.

C. Wm. Boozer is driving a new Ford Tudor sedan, purchased through J. S. Boozer, who also sold a three-quarter ton Pontiac truck to Charles Stitzer, of Pleasant Gap.

FARM CALENDAR.

Timely Reminders from The Pennsylvania State College.

SALT THE DRY COWS—Do not forget to provide salt for dry cows and heifers on pasture. There should also be a good water supply and extra feed when pasture gets short.

ENCOURAGE EGG LAYING—Green feed added to the ration will aid in keeping the hens in production. Be sure that there are no mites in the poultry house and make it as comfortable as possible in every way.

CONTROL BAD WEED—Horse nettle grows in pastures, meadows, gardens and cultivated crops in many counties in the State. Keep the shoots cut down to completely starve the rootstocks. In large areas, frequent cultivation, as in check-rowed corn, with hand hoeing for stray shoots and after cultivation, is a good control method. Smother crops or summer fallow will also control this pest.

SELECT SHOW SPECIMENS—The best time to select specimens for exhibition at fairs and farm products shows is during harvesting. Pick typical specimens. Size does not always indicate superiority or excellence.
