FARM CALENDAR.

Timely Reminders From The Pennsylvania State College.

REMOVE HONEY FROM HIVE—Comb honey should not be left in the hive very long after it is sealed, especially at the close of the honey flow. The bees will continue to add propolis to the sections and will stain them as long as the remain in the hive.

GROW WELL-BRED COWS—"Safe," "sure," and "cheap" are terms which may be applied to dairy cows when home-raised, provided they are of good breeding, free healthy cows, and well grown.

CULL THE POOR LAYERS—Although culling can be practiced as soon as the chicks are hatched, nearly 40 per cent. of an average flock of hens will probably have to be culled between June and September. By eliminating the poor producers which quit early in spite of proper feeding and management, less labor and feed will be needed to obtain equal returns from the flock.

PLANT LATE VEGETABLES—Among the garden crops which can be planted in late July and early August are endive, kale, kohlrabi, lettuce, radishes, spinach, and late turnips. Keep the garden working for the family larder.

FEED THE BERRY PATCH—Strawberry beds will develop stronger and more productive runner plants if sidedressed with nitrate of soda and superphosphate.

PROTECT THE POTATOES—Flea beetles can be controlled by spraying with arsenate of lead or calcium arsenate, say State College entomologists. Add three or four pounds of the material to 100 gallons of bordeaux mixture.
