The continued high production of automobiles in this country is something perfectly marvelous. If people Nursing. want to know why it has happened. they can get a good idea from studying the automobile advertising in the newspaper and the magazine. The people buy automobiles largely because they see these cars described and pictured so frequently in the newspapers. The information given about these cars so interests them that their minds run on automobiles day and night. Forestry. Tois development is a demonstration that if you want to sell an article or line of articles, the way to do it is to print a lot of stuff about them, and of the members of the class of 1928 the people will be interested in those articles and buy them.
