FARM CALENDAR

Timely Reminders from The Pennsylvania State College.

PICK SEED IN FIELD—Select seed corn in the field. Gather only well-formed and mature ears from healthy, vigorous, well-rooted plants having green stalks and yellow tassels. About 15 medium-sized ears will plant an acre, but save twice as much as will be needed for planting if possible.

EARLY LAYING BEST—Early hatched pullets that start to lay in October and November are usually the most profitable egg producers. High egg prices occur in the early fall and winter months. Before the pullets begin production they should be fatty mature and well-fleshed. It is advisable to feed a liberal amount of grain now in order to build up a surplus of flesh.

PREPARE FOR PLANTING—Now is the time to prepare the beds for fall bulbs. Some of these should not be set until late in October, but time will be saved by having the beds ready at planting time. Dig down to depth of one foot, pulverize the soil, and mix it with leaf mold and sand, State College specialists recommend.

PROTECT FARM TOOLS—A good farm machinery shed will soon pay for itself by prolonging the life of the tools it protects. This happens however only when the shed is used for its intended purposes. Machinery left standing in the field after the seasonal use is past gets no protection from the destructive elements, regardless of the fact that there may be a good shelter for it. Make both machinery and shed pay for themselves by introducing them to each other.
