FARM CALENDAR.

Timely Reminders from The Pennsylvania State College.

PROTECT TREES FROM MICE—Mice gnaw enough fruit trees in the United States to cause an annual loss of about \$5,000,000. Why not put some poisoned grain in your orchard to destroy these pests and prevent your share of this loss? This is a good time to put out the bait.

CONTROL CORN BORERS—Cutting corn low helps to control the European corn borer. Ensiling and shredding are operations employed to destroy the insect. Cleaning up all trash is a necessary practice and it should be burned, buried, or plowed under cleanly in the field. Insects permitted to live will multiply by the hundreds next year.

ORDER FOREST TREES NOW—Speaking of the thousands of forest trees planted last spring, forestry specialists of the Pennsylvania State College call attention to the absolute necessity of ordering trees early for planting next spring. Your county agent can help you decide what type of trees are suitable for your conditions. He can also get you an application blank for trees to be ordered from the State Department of Forests and Waters.

STORE WINTER VEGETABLES—Despite the dry weather there will be many vegetables to store for winter use. There are different requirements for storage which should be observed if the vegetables are to keep well. Get a copy of Circular 120, The Family Vegetable Garden, from your county agent or from the Agricultural Publications Office, State College, Pa., for information on storage and garden operations.
