21 Barrels More per Acre from seed potatoes treated with SEMESAN BEL

POTATO growers in many states report increased yields from Semesan Bel treated seed potatoes. For instance, C. E. Randolph of Maine, whose increased crop is shown above on a one-tenth acre basis, harvested 21.4 barrels more per acre. A farmer in Allegheny County, Maryland, increased his yield 60 bushels per acre as a result of Semesan Bel seed treatment, while in Crawford County, Iowa, increases of 37 bushels per acre on Ohio seed and 88 bushels per acre on Cobblers have been reported.

Controls Seed-Borne Diseases.
Diseases, such as Rhizoctonia, scab and black leg, which result in reduced yields and lowered quality, are due to surface infections by fungi and bacteria. Treating the seed with Semesan Bel destroys such surface-borne organisms. The attacks of certain soil-infesting organisms are often prevented by the coating of a disinfectant which remains on the seed piece throughout the season.

Quickly Applied at Low Cost.
No time-consuming soaking, hot water or expensive equipment necessary. Simply mix with cold water, dip and plant. Semesan Bel retains its disinfecting strength until completely used. One man alone can easily treat from 200 to 400 bushels per day. Even sprouted seed may be safely treated with Semesan Bel.

One pound of Semesan Bel makes 10 quarts of dip which treats from 16 to 22 bushels of seed potatoes. Use for both white and sweet potatoes. Packed in all convenient sizes from one to 300 pounds. Four ounces, 50c; one pound, \$1.75; five pounds, \$8.00.

Use Ceresan for seed grains and cotton; Semesan Jr. for seed corn; Semesan for vegetable and flower seeds and bulbs.
