#### **ABOUT ZOO ANIMALS**

HERE are certain months in the ■ year I like," said Mrs. Bison, otherwise known as Mrs. American Buffalo.

"And what, pray tell, are they?" asked Mrs. European Bison.

'Mrs. European Bison is of the buffalo family and is a near relative of Mrs. American Buffalo. Her legs are longer, her body shorter, her hair on her head and back is not so thick. while the hair on the end of her tail is thicker.

She is a good deal shorter on the whole.

Mr. and Mrs. European Bison lived in a yard adjoining that of the American Buffalo family. They were all quite friendly.

"Tell me," said Mrs. European Bison, "why you are so fond of certain months of the year."

"I will do that gladly," said Mrs. Bison, or Mrs. American Buffalo. She was usually known as Mrs. Bison while

"Here Is My Darling Bennie Buffalo." her neighbor was always called Mrs. European Bison.

"Also please tell me which months they are," Mrs. European Bison further requested.

"That I will do gladly, too," said Mrs. Bison. "The months I like are the late spring and early summer months, I believe they call them July, June and May."

"They do," said Mrs. European Bison, "but you are speaking of them backwards. Folks usually speak of them forwards."

"Pooh!" grunted Mrs. Bison. "What care I for folks! Nothing! There!" "Do continue with your tale," said

Mrs. European Bison. "My tail is quite long enough," said

For Meditation 000000 By LEONARD A. BARRETT

#### A SYNTHETIC WORLD

I N ALMOST any store you can pur-chase today artificial silk and artificial wool. Many articles are offered for sale manufactured from artificial leather and artificial horsehair. You can buy synthetic drugs from any drug counter. The essence of wintergreen is very expensive, but the artificial article is comparatively cheap and is as effective as the genuine drug. It is very difficult

ference between a real egg and an artificial one especially when used in baking. The one produces about as good an effect as the other, only you cannot produce a chick from the synthetic article. We are now hearing about the possibility of synthetic paper to be manufactured from a

The last and perhaps most interesting contribution to the field of synthetic products is rubber. Rubber is used in such a variety of articles that it has been estimated this year's demand will exceed 800,000 tons of the raw material. Among the many articles made from rubber, automobile tires consume the larger portion of the available supply. Rubber is imported to this country and tire companies for some time have desired to be less dependent upon a foreign product. They had little hopes of synthetic rubber ever coming into the market, especially, since a noted German chemist in an address before the Carnegie Institute of Technology stated that extensive researches had convinced him that the obstacles to the production of synthetic rubber were almost insuperable. Prior to this incident, it was announced, that "Before the war 500 patents relating to synthetic rubber were issued in Germany, none of which led to the production of a single ton of rubber." It is interesting to note that Thomas A. Edison has undertaken the task of manufacturing this article. He claims it to be the toughest problem he has ever attempted. But, he says, "Give me five more years and the United States will have a rubber crop."

substitute for wood pulp. Even syn-

thetic gasoline has been suggested, and when electricity has been successfully subtracted from the sunlight, and properly controlled for distribution, the problem of heating and lighting as well as horse power for the world's machinery will be much simplified.

# BILL, THE

cuse and a reason. You can find plenty excuses, but not one bloomin' reason for bein' careless.'

(By MARCUS A. DOW.) If there's any one kind of a hick answerin' to the name of drivin' fool it's the bird who waves alibi at you whenever he gets in dutch and has an accident.

A party of my more or less remote acquaintance parked his speed buggy at the curb and went into a house, While he was gone it rolled away and collided with a sedan. In the sedan was a lady about thirty years old. She was a good lookin' dame, fair complected, brown hair and a cheery smilin' sort of face that spread sunshine wherever she went. Her sedan got a nasty rap and a piece of jagged glass cut a deep ugly gash on her pretty cheek, disfigurin' her for life. wonder how does that thoughtless lunatic that left his car parked in an unsafe manner feel about it down in his heart?

In his insurance report he wrote, "While I was in the house the brakes on my car let go, which was the cause of the accident." Don't his alibi give you a laugh? As if that tin can of his had some ghostly power enabling it to let go and start up of its own free will and ram another car. Now you know and I know his brakes didn't just let go. The fact is this guy parked on a grade, forgot to cut his wheels to the curb, and left his engine running! The vibration of the engine jarred the brakes loose and that old bus of his rolled down hill. A natural outcome of this guy's damfool carelessness.

I heard of a guy workin' on a railroad who turned in an accident report like this, "John Smith, brakeman, got bit on the end of the finger while trying to spit tobacco juice down a rattlesnake's throat." In answer to the question, "Who was to blame for the accident?" was written, "The rattle-

Drivin' a bus or auto careless like is the same as teasin' a rattlesnake. Don't blame the snake if it bites you. And believe me, I know a lot of folks this kick in the shins is meant for.

### Occasional Change of Oil Saves Efficiency

An engine, to operate efficiently, must have an occasional change of oil. If its lubricating value is dimin ished there is undue wear of all engine parts, which may lead to serious damage. Oil becomes practically worthless if an excessive amount of gasoline has become mixed with the lubricant, so as to make it very thin, or if water has gotten into it and caused it to emulsify or to contain free acid. Also, if dust, metal particles, pieces of carbon or other hard and abrasive material have polluted the oil in considerable quantities, its further use will cause very rapid wear of engine parts.

## \*\*\*\*\*\*\* **AUTOMOBILE HINTS**

\*\*\*\*\*\*\* Valve cores in tires should be renewed about once each year.

A little light oil will relieve the stubborn manipulation of the choke

Over 58 per cent of the new cars bought last year were on the installment plan.

The fouling of spark plugs or excessive oil consumption will cause the engine to smoke.

A new car sometimes turns out to be a "lemon" simply because the owner has not given it the proper care.

Cars are getting lower and lower and maybe the time will come when pedestrians can jump over them.

A hit-and-run motor driver may be hard to catch. The penalty should be the more severe on that account.

#### THE MOTOR QUIZ

(How Many Can You Answer?) 3,000,000,000,000,000,000,000 Q. Why does an old car use

more oil than a new one? Ans. Primarily because different joints in old cars are looser, permitting the oil to leak out. Also pistons and rings which have been worn will pass oil into the combustion chamber ; where it is burned.

Q. If after parking one finds oil has leaked from the engine of his car, what should he do? Ans. The car should be inspected and loose parts tightened in order to conserve oil. This will make a big difference in oil consumption.

Q. What is the most important oll saving device on the automobile?

Ans. The oil filter. It removes the foreign matter from the oil, thus making it possible to use the oil much longer. Every 10,-000 miles the oil filter cartridge should be renewed as it becomes filled at this mileage. O. If the oil filter is not re-

newed when it becomes filled with foreign matter, what happens? Ans. It will be necessary to

change oil more frequently as the oil is not filtered.

### Attain High Speed With Self-Propelling Rockets

The latest adaption of rockets has been their use in propelling cyclists. The picture shown above is one taken on a Berlin track in which the riders

German Cyclists Use Rockets.

attained a high speed of 40 kilometers an hour. The exact results have been kept secret and will not be made public until the completion of the tests.

## Pointers on Proper Care of Expensive Automobile

Engine and chassis lubrication, batteries, radiator and tires are the important things to consider for the efficient operation of a car. The engine, chassis and radiator should be attended to according to the particular needs of the car, but batteries should be watered at least once every two weeks, and tires gauged and checked at least once a week.

Water and oil are two of the worst enemies of tire fabric, and, for this reason small stone cuts in the casing should be kept filled with some good tire filler. Oil will ruin an inner tube in a week. Never throw the extra inner tubes in promiscuously with the greasy rags and oil can. Wrap them carefully in cloth, or, better still, get a couple of good, strong cloth bags for them.

#### **Protecting Automobile** Engine Against Wear

The thin oil film between moving parts is really what protects the automobile engine against wear. This off film is six times thinner than the page of this newspaper. It is kept clean by the oil filter-the device through

which the oil passes and is filtered. After 10,000 miles of driving it is important to service the oil filter because after this mileage it becomes filled with as much as two pints of dirt, sludge and other foreign matter taken from the oil, and ceases to function at highest efficiency in keeping the oil film clean.

## INAUGURATE FIRST MOTORBUS SLEEPER

The motor-bus traveler will now travel in a style equal to other transportation, with the inauguration of the new night-coach pullman and diner service. The new "Pullman of the Highways" will travel between St. Louis and Kansas City, and breakfast will be served en route at portable tables. The pullmans have two levels of chairs. These seats, 26 in all, are converted into 26 berths, the beds measuring 6 feet four inches long.

Freak Addresses Barred

The Post Office department has announced that hereafter letters bearing freak addresses will be sent to the dead letter office if they do not bear addresses of senders. Postal authorities in the past have been indulgent toward violations of the rule that all letters and post cards should bear proper addresses, but this recent decision would indicate that it was forced by an increase of firstclass matter bearing freak addresses.

## Handicapped

A magazine writer asked Paul Shoup, the California railroad king, if he did not think the present generation was admirably adapted for railroading, both by nature and by training. Mr. Shoup laughed.

"The modern boy," he replied, "is mechanic-minded. He can run almost anything except an errand."

## THE WHY of SUPERSTITIONS By H. IRVING KING

## SHINGLING BY THE MOON

M ANY people believe that you should shingle your roof when the moon is on the wane. The shingles put on at that time will lay flat-"go down" as they say-while singles laid when the moon is on the increase are liable to warp and curl up. This superstition has been found existing in this country by the American Folk-Lore society and is another case of the survival into our own times of the primitive doctrine of Lunar Sympathy which considered both human acts and material things as sympathetically affected by the waxing and waning of the moon. When the moon is waxing it gradually increases itself from a thin line into a round ball-and shingles will try to do the same. Whereas when it is on the wane it goes through an opposite process and shingles laid on are correspondingly influenced. It will be noted that by the doctrine of Lunar Sympathy that sympathy is exerted upon material things in a determinate manner at some particular and crucial time of the object's existence-when the timber is cut, when the seed is planted,

when the shingle is laid. (6) by McClure Newspaper Syndicate.).
