WHITEWASH FOR FARM AND THE HOME

Spring is here and with it comes an instinctive desire to aid Nature in her work of beautifying our surroundings. Homes are cleaned from cellar to attic, yards are raked, houses painted, and outbuildings, fences, stones and tree trunks are whitewashed to make them more attractive.

Many folks use a simple mixture of lime and water for whitewashing but are not satisfied with the lasting qualities. This can be considerably improved if salt is added as per the following formula: Dissolve 25 lbs. of salt in 7½ gallons of water and add 50 lbs. of hydrated lime or the lime putty made by slaking 35 lbs. of quicklime. Mix thoroughly, thin to desired consistency, and apply with brush or sprayer.

For a very durable whitewash, which will not rub off or chalk and may be used inside or out, the following formula will be found excellent. This mixture may be satisfactorily used for white washing buildings, interior walls, stables, dairies, etc., wherever a high class, lasting job is desired. It requires more care in mixing than the above formula, but the extra effort is well worth while:

Mix as follows: Soak 5 lbs. of casein (thickened milk) in 2 gallons of hot water until thoroughly softened (about 2 hours). Dissolve 3 lbs. of trisodium phosphate in about a gallon of water and add this to the casein solution. Prepare a thick cream by mixing 50

lbs. of hydrated lime (or the lime putty made by slaking 35 lbs. of quicklime) in about 7 gallons of water, stirring vigorously. Dilute 3 pints of formaldehyde in 3 gallons of water. When the lime and casein solutions are both thoroughly cool, slowly add the casein to the lime, stirring constantly. Now very slowly add the formaldehyde solution to the batch, stirring constantly and vigorously. Care must be taken not to add the formaldehyde too rapidly or the casein may jelly, thus spoiling the batch. Do not make up more of this formula than can be used in one day.

FARM CALENDAR

TIMELY REMINDERS FROM PENNSYLVANIA STATE COLLEGE SCHOOL OF AGRICULTURE

Find Potato Costs—
It cost 55 farmers in 15 Keystone counties an average of 92 cents a bushel to produce potatoes last year, records summarized by farm management extension specialists of the Pennsylvania show.

Order Forest Seedlings—
Now is the time to order forest tree seedlings for 1932 planting. Early orders get the best selection. Choose black locust for fence posts, Norway spruce for pulp wood, larch for telephone and electric light poles, Scotch pine for mine timbers, red, white, and pitch pine for lumber. Consult your county agent.

Feed Cows on Pasture—
Grain feeding is necessary when cows are on pasture if milk yield is large. Cows giving more than twenty pounds of milk daily should have grain even if grass is abundant. A common rule is one pound of grain to each 100 pounds of milk given by the cow. Protein content of the grain mixture need not be above 15 per cent.

Raise Turkeys Successfully—
Turkey eggs can be hatched in incubators and the poults can be raised successfully with brooder stoves. Growing and mature birds can be yarded and kept away from contaminated soil.

Apply Potato Sprays—
Spraying of potato vines is absolutely essential if successful culture is to be realized. Bordeaux mixture is the greatest of all sprays for potato diseases in the field.

Mow Lawns Often—
The best way to use a lawn mower is often. Clipping the grass at short intervals improves the looks of the yard as nothing else can.

Corn Borer Aids Plowing—
Fighting the corn borer has helped farmers to do a better job of soil preparation. Plowing under all trash is a fundamental control measure.
