Destructive Locusts

The cicada or harvest fly is not a locust at all, the true locust being a grasshopper. The periodical cicada or 17-year locust is a large insect about an inch and a half long with wide blunt head and with prominent eyes on the outer angles. It is black, banded and marked with some orange on the abdomen, and it has six reddish legs. It has four shiny transparent wings with network of orange-colored veins. Its life cycle is about 17 years, most of which is spent as a larva or pupa underground. The locust has long hind legs with thickened thighs and narrow leathery wing covers.

Beware "Friendly Enemy"

The original saying, "I fear the Greeks bearing gifts," appears in Vergil's "Aeneid." The reference is to the siege of Troy. The Greeks besieged the city of Troy without success. Finally they resorted to strategy, offering a huge wooden horse to the Trojans as a gift. The horse was taken into the city, and while the Trojans slept the warriors, with which the horse was filled, came forth and opened the gates for their Greek comrades. The conclusion is that one should fear an enemy most when he seems friendliest.

"Penny" is Unofficial

The term "penny" has been in general use in this country since the Revolutionary war, but it has never been the official designation of any coin minted in the United States. It is and has been a recognized coin of Great Britain and the coinage of England was used in this country for a number of years after the Revolution and the use of the term became an established custom at that time and the name became applied to the cent as it was about the same value. The first cents actually minted under the Constitution appeared in 1793.

Hopeless

The minister had been talking to the little son of a neighbor.

"It grieves me very much, my young friend," he remarked, "to hear you say that you pray for your mother and not for your father. Now, tell me the reason."

"What's the use?" returned the boy. "Ma'ma says that dad is beyond all hope."
