FARM CALENDAR TIMELY REMINDERS FROM PENNSYLVANIA STATE COLLEGE SCHOOL OF AGRICULTURE Store Vegetables—Home storage of vegetables is an economical way of supplying the family needs until April.

Feed Needy Heifers—Heifers on pasture should be watched carefully at this season. If feed is short extra amounts should be provided. This is especially important in the case of heifers due to freshen this fall.

Prune Pine Trees—It will pay to prune the lower branches of white and red pine trees when they are not over four inches in diameter. Choose a good straight pine every 15 to 20 feet in the plantation and cut the limbs at one operation.

Select Seed in Field—Seed corn selected from the standing stalks will yield better than that picked from the wagon box or crib. Field selection permits the picker to observe the position of the ear on the stalk, the size of the plant, and other conditions of growth.

Treat Seed Wheat—To control stinking smut of wheat clean seed should be planted. If any traces of smut are found the seed should be treated with two and one-half ounces of copper carbonate, dust per bushel after the seed has been carefully cleaned.
