New Discoveries in an Old Business

Long before farmers realized it, egg handlers were convinced that the kind of feed the hens received had a marked influence on the quality of the eggs produced. Since the egg is made from feed, it is only natural that the character of the finished product should be affected by the kind of raw material used.

To find a complete ration which would produce the finest quality of eggs and at the same time meet the practical requirements of egg production has been the object of five and one-half years of research at the Purina Experimental Farm and Purina Biological Laboratories. The result is a new quality egg producing mash, recently announced.

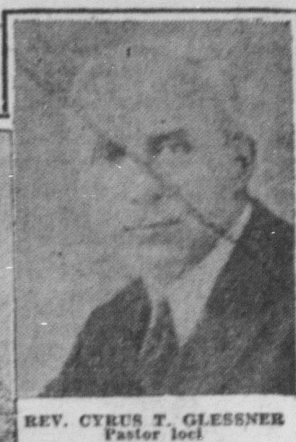

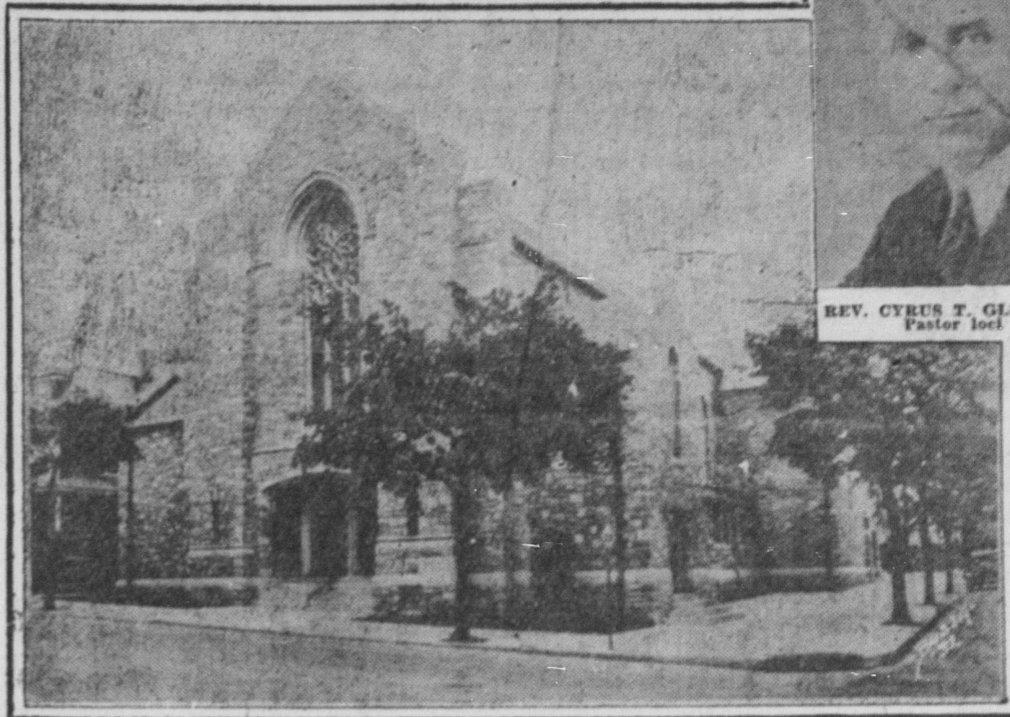

The hens themselves were made to tell by the kind of eggs they produced just what ingredients and how much

BIG ROCK

A scene awaited us which justified our tramp through seeming endless stretches of pines and fields of long-needled growths of weeds and other wild vegetation. Hurdled by a mound on impatient for the sight. As we rounded a curve in the trail, it came upon us in all its dazzling power and clearness.

Below us lay the valley in unfathomable depths, it seemed. On both sides of the rock on which we were standing were two mountains that seemed like two powerful sentinels guarding greedily their vision. Below a series of rocky ledges formed a sheer descent to the valley below. Dotted with pines destined for a short life, the side of the mountain presented a harsh aspect. A sparkling stream flowed around the side of the mountain down through a gap as if to show its power. A large dam received the flow from this stream and distributed it to the State Prison a mile away.

Such was the scene from our vantage point, Big Rock. —Paul Foust '34.
