STEEL ALONE IS NOT ENOUGH!

—neither strong enough, nor safe enough, nor quiet enough for the body of a quality car like CHEVROLET

Why is it that every 12-cylinder and 16-cylinder car in America has bodies of steel reinforced by hardwood? Why is it that every make of car selling for over \$4000 uses bodies of exactly the same type? Why? For the same reason that Chevrolet uses it exclusively. Because every test and every experiment have definitely proved: STEEL ALONE IS NOT ENOUGH!

The trouble with steel alone is that it stands just so much shock and punishment. Steel alone is also inclined to rumble and rattle. BUT—when you put the two together—a heavy, staunch steel body over tough, solid hardwood—then the hardwood reinforces the steel—and vice versa! And the result: the strongest, safest type of body, such as Fisher builds for Chevrolet. CHEVROLET MOTOR CO., DETROIT, MICH.
