# SUCH IS LIFE—And Such Is Life!

# The Household

A striped paper makes a ceiling appear higher than it really is and is excellent to use in low-studded rooms

THE selection of wall paper best suited to the rooms of a dwelling is not a matter to be given slight consideration. The design is of major importance, no less than the color. The exposure of any specific room is a guide to color for it. The size and shape of the room is a guide to correct choice of pattern. The exposure of a room signifies its position in relation to the points of the compass. A room in the north part of a house is said to have a northern exposure. One in the southwest part of the house, that is one with windows on south and west so that light comes from both sides, is said to have a southwest exposure, etc. Because light from the north is cold, it should influence the selection of paper for a room with windows on the north side, which let in no sunlight, or practically none.

Select Paper That Will Reflect the Light. According to the exposure of the room in connection with the amount of sunlight it gets, is it cold or warm in its natural lighting? It should have wall treatment to counterbalance either a lack of sunlight or a flood of it. These are the reasons why a north, northeast, or northwest room should have a warm paper, while a south, southeast, or southwest room does not require it. . The most pronounced warm colors are yellow suggesting sun and red suggesting fire. But, since red is an inflaming and irritating color in proportion to its Intensity, it has to be handled with care when used for decorative purposes. Yellow, on the other hand, is stimulating rather than irritating and shades, tints, and tones, of it can be successfully employed on walls.

Proportions of Room It is not the exposure, but the size and shape of a room, as mentioned before, which determine the style of | cap of Southern Greenland.

design or pattern to have in a paper. The reasons for this are geometric. They have to do with counter-balance ing of high or low ceilings and the proportions of wall and floor space. The pattern of a wall paper can subtly make a room appear high or low studded, and larger or smaller than it actually is.

A wall paper with stripes makes a ceiling seem to be higher because of the upright lines which tend to make the vision follow their perpendicular A wall paper with a pattern which tends to make the eye follow lines across a wall, lowers the apparent height of a ceiling. This is not so boldly done as in the instance of striped paper but there are many wall papers in which the repetition of the design is so cleverly planned that the eye follows it along horizontal lines,

The two points considered today, color and design in their broad application, are of primary importance. They are of first consideration. ©. 1933. Bell Syndicate,-WNU Service.

### The Fear of Death LEONARD A. BARRETT

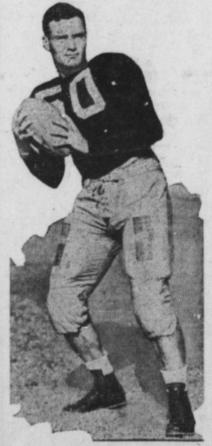

The three major fears may be classified as death, poverty and disease. The fear of death, while not the most

important or most serious, is perhaps more common than the other two. The fear of poverty and diseasè seems to attack those in more mature life, while the fear of death manifests itself to persons of almost ell ages. While the less dangerous from a psychological point of view,

the fear of death is the most terrible. Persons shudder at the thought of it and a superstition still clings to many circumstances connected with the experience. Some persons still believe it is a sign of approaching death for one to see in a mirror the form of a dead person; or, to pass between carriages in a funeral procession is an ill omen.

Much of this fear would doubtless be dispelled if we could only understand just what does happen in the event of death. It is not a case in which, "Who knows what dreams may come." or, a condition of semi-material existence afterward. Death is the most natural experience in the world. Just what happens in all material life. occurs in the physical, when the tissue breaks down. Death occurs when the body ceases to function. When the

mind, or soul, passes on, the body is of no more value than its component parts of lime, water, etc., all of which parts, when measured in dollars and cents, is not even worth a dollar, only 98 cents. Strange that we should exalt the body when it is of so little value. Place a true value upon the body and one of the causes for fear

of death will have been removed. The fear of death will also be dispelled if we think of it more as a transition than a finality. Death is only the passing of the personality from one state of existence into another. It does not mark the end of things, in truth it is the beginning of a larger and more beautiful life. Immortality is being proved true today, not only by teachers of religion; but, the latest discoveries in the field of science attest the reality of an immortal world. Death cannot destroy those things we love, any more than it can destroy love itself. "Love is stronger than-death," said the wise man of long

A wonderful journey into a world of spiritual realities seems as though it might be heartly welcomed for those whose race is run. Why fear?

The Word Cantaloupe The word cantaloupe is often loosely used, but should really be applied only to a particular variety of ribbed muskmelon which was first grown in Europe at the castle of Cantalupo, in

Make Up a Long Roll

Not All Great Heroes Made on Battlefield.

Washington.-Three scientists in the medical forces seeking to solve the mystery of sleeping sickness have submitted to bites from mosquitoes which previously had bitten victims of this exotic malady. Their purpose is to determine whether insects carry the infection.

Of the particular sort of peril to which these unknown men are subjecting themselves at St. Louis, where sleeping sickness has caused about ninety deaths, the classic modern examples are those of Father Damien, who went among the lepers, and the doctors who offered themselves for the experiments in Cuba to find a way to control vellow fever.

No Hippocratic oath was involved; no soldierly obligation. The army had released Cuba from Weylerism and was aiding it to set up as a republic. Yellow fever broke out. Sargeon General Steinburg, U. S. A., ordered a commission of American officers to investigate. Dr. Walter Reed, major in the Medical corps, headed it; other commissioned members were Dr. James Carroll, years before a private; Dr. Jesse William Lazear and a Cuban, Dr. Aristide Agramonte. Doctor Lazear, a Baltimorean, died from the

Yellow Fever Fight. As early as 1848, Dr. J. C. Nott of Tulane university stated the hypothesis that yellow fever was transmitted by an insect. In 1881 Dr. Carlos Finlay of Havana accused specifically the mosquito. But the guilt of the mosquito had not been proved. First to submit to bites in the army investigation was Doctor Carroll. He was severely stricken with yellow fever, but recovered.

Doctor Lazear applied to himself the mosquitoes that had infected Doctor Carroll. No results. One day a mosquito lit on his hand. He let it do its work. Five days later he was seized fover. It raged the his system and in ten days he was dead. Reed had been to Washington to report and returned after this death to obtain further confirmation that the mosquito, stagomyla fasciata, was the transmission agent. Privates John J. Moran and John R. Kissinger volunteered. They had enlisted to fight for the Stars and Stripes; now the "black vomit" was attacking their comrades and had killed Doctor Lazear. Said Major Reed: "Gentlemen, I salute you."

They were isolated. Kissinger was bitten by five mosquitoes and developed a typical case of yellow fever, He recovered. Moran and others went through the same ordeal; all survived. From Cuba to Panama.

What the commission and its volunteer subjects had learned fulfilled the task assigned. As a result of measures enforced thereafter throughout Cuba by Gen, Leonard Wood and Maj. William Gorgas, not a single case appeared there in 1902. Gorgas took the knowledge gained to Panama, and | 50 cents every time they want it.

## ODD THINGS AND NEW-By Lame Bode

BIRD EMBLEMS OF STATE

The value of selecting a state bird has been summed up by Katharine B. Tippetts, of the General Federation of Women's Clubs, which has been the directing force in the campalgn. "The mere fact that these bird emblems have been chosen," she wrote, "is not important so far as the emblem itself is concerned. What is significant is that which led up to the selection; the discussion, study and thought that it required, the very real educational service that it performed. And the result is that affectionate interest has been thus aroused in all birds and their protec-
