"GLAD GIRLS."

The "Glad Girls" will hold an open meeting in the Presbyterian church on Monday, Feb. 19th, at 7:30 P. M. The program will be presented and followed by a social hour. The public is cordially invited. Parents especially urged to be present.

Good feeding is a keystone of profitable dairy farming, the Sears-Roebuck Agricultural Foundation says. But it must be supported by firm foundations, such as good breeding, control of disease, development of other sources of income, and an effective cropping system.

Cows rightly fed give 50 to 100 per cent more milk than when their rations are deficient in some way. Differences in the amounts and kinds of feed fed account for about half of the variation in production per cow on different farms. Good rations increase the cost of feed, but increase net income 40 to 80 per cent.

Scanty grain rations usually are not really economical. Grain should be fed according to production, about 2 1/2 pounds being given daily for each gallon of milk produced. Moderate grain rations for cows on pasture often increase net returns 5 to 75 per cent.

Lack of protein is a prevalent fault of dairy rations, the Foundation continues. It is deficient in most home grown feeds and is costly to buy. Milk contains much protein. The cow can not alter its composition according to the feed received and cuts down production when the protein supplied is inadequate. Giving enough protein often will increase production 20 to 40 per cent.
