A regular meeting of the Spring Mills Fish and Game Assoc. was held Thursday evening. Members of the association had as their guest that night, Dean R. L. Watts of the School of Agriculture at Penn State...

FARM CALENDAR.

Timely Reminders from Pennsylvania State College School of Agriculture

IMPROVE PASTURES - Pasture will respond to lime, fertilizer, and manure just as profitably as the other parts of the farm. Pastures, Old and New, a circular available free from the Agricultural Marketing Board, State College, Pa., or from your county agent, tells how to get results.

SELECT GOOD SEED - Before making a final decision on the seed to be planted this spring, potato growers should be sure that the seed they intend to use is free from disease, will give a good stand, and will produce a good yield under fair to good growing conditions.

USE COBS FOR LITTER - Ground corn cobs can be used as litter in the brooder house. The cobs should be ground into pieces from one-quarter to one-half inch in size. This litter, like all litters, should be stirred every other day so that the droppings will work to the bottom.

GROW EARLY PLANTS - The fruiting habit of the strawberry is such that the first plants developed in the spring are the heaviest producers of berries the following year. Consequently, the larger the number of these early plants the greater will be the yield.

CORN YIELDS HIGH - Hybrid crossed sweet corns have yielded as high as twice that of ordinary open-pollinated varieties and frequently have better quality. Top Cross Spanish Gold, Spangcross 29, Sunshine Top Cross, Whipple Cross, and Golden Cross Bantam are the important lines of pedigreed sweet corns.

CAUSE FARM FIRES - More than 50 per cent of the fire loss in rural sections is said to be caused by defective flues and chimneys.
