What is the "Low-price Field"?

YOU hear a lot about "the low-price field" these days. A good many cars claim to be in it. So whenever the low-price field is mentioned, remember:

Until Ford came, no average American could own a car.

Today all Ford prices are still low — with the prices of the 60-horsepower Ford V-8 \$30 to \$60 lower than those of any other car of comparable size.

But with Ford, "low price" doesn't merely mean low figures on the price tag. It means much more than that. It means low prices and low costs all the car's long life. Low prices for service — for parts — and, above all, for operation.

Both Ford V-8 engine sizes are economical to operate. The 85 horsepower gives greater gasoline mileage this year than ever, and the "60" delivers the highest mileage in Ford history.

Private owners, cab companies, fleet operators all report that the "60" averages from 22 to 27 miles per gallon of gasoline.

Check and see how much Ford saves you.

DOUBLE WALLS

This feature alone is enough reason to buy a SPEED QUEEN

to keep water hot

Any woman knows that hot water removes dirt quicker than luke warm water. Therefore, for a washer to wash the last batch of clothes as fast and clean as the first, the water must STAY HOT. Tubs that throw off heat can't do this. The Speed Queen CAN because it has double walls with air space between that insulates the tub and keeps the water piping hot through a whole washing. This advantage alone is enough reason to prefer a Speed Queen. Keeping water hot may not seem important while you are looking at washers, but it certainly will when you start washing.
