New Lighting, Even Bubbles in Color To Beautify Fair

NEW YORK. (Special).—None of the scientific discoveries or developments being hurried from the laboratories to make the New York World's Fair unusual and thrilling will produce more startling results than the latest technique in illumination.

This statement was issued by Grover Whalen, President of the Fair Corporation, at the inauguration of experiments by the Fair's staff of engineers and illumination experts. Their consultants. These men are already at work with quarter-inch scale models of the Fair, types of lighting equipment never before used in comprehensive manner, and utterly new principles never developed practically. They are dealing with everything from fluorescent dyes and colored bubbles to concentrating lamps and floodlight systems.

The plan is not to create spectacular effects in the usual sense of the term, says Mr. Whalen, but rather, to create designs in light that will make their appeal through their magnitude and their sheer beauty.
