For the Farmer.

Cross-Plowing. [From the Germantown Telegraph.]

I am apprehensive that many of our practical agriculturists labor under a misapprehonsion as regards the real affects of crossplowing. Let us for a moment examine the subject:

In the first place, a well-swarded field is broken up with a furrow eight inches deep. Supposing the work to be well performed, and all the furrows laid in a workmanlike manner, the sward portion of the furrow slice, or that which is composed of the fibres and stubble will occupy about three inches of the inverted slice, and be covered with five inches of mould, which is probably as deep as manure intended to exert its influences upon the succeeding crop, should be placed. By passing the roller lengthwise of the furrows, the furrows will be compressed and consolidated, and decomposition will go on regularly and without interruption, till the burried vegetable matter is resolved into humus, and ready for the healthy support and sustenance of plants. Now if, in cross-plowing, the share of the plow penetrates at any place, more than five inches below the surface, it is obvious that the deposit must be disturbed; The sod, or turf, will be broken, and the detached portions brought to the surface where, deprived of moisture, and exposed to the sun's rays, they will dry up, and be as little useful in the great work of supplying nutriment to vegetable life, as so many stones. It is never possible to cross-plow without in some degree disturbing the sward furrow and if these are to be left on the surface of the field, the difference betwen good plowing, which is universally acknowledge to consist in laying the furrow slice level, and covering it completely, and bad plowing, which only sacrifies the surface, and leaves the sward standing on its edge, or exposed on the surface of the field, is by no means a material one. When the soil requires pulverisation, it is better to work the surface thoroughly with the cultivator and harrow, which will reduce it to a fine tilth with out any of the inconveniences which attend the use of the

I merely throw out these suggestions, as I am confident most of our farmers are not sufficiently impressed with the great and vital importance of retaining the sod beneath the surface. From its nature turf requires a supply of moisture at once constant and liberal, to secure its most favorable action on the soil and crop. Greenwood, Pa., April 22, 1858. W. S. G.

Stirring Soil Around Trees. [From the Germantown Telegraph.]

The opening or lightening the soil around the roots of trees, either in the spring or fall, for the purpose of letting in warmth, and afpromoting the health and vigor of the tree. All trees, whether fruit or ornamental, young or old, indigenous or exotic, are vastly benefitted by this process. In old orchards, the soil about the trunks of the trees, and a considerable distance from them, in every direction, should be carely broken, and the upper surface to the depth of three or four inches, removed in the spring, every four or five years. The eggs of the curculio and other insects, are deposited in this stratum, and if not removed or destroyed, will produce insects, the ravages of which the succeeding year, will be productive of far greater loss than the expense of removing the soil, and replacing it with compost or loam. It is an utterly hopeless undertaking to attempt the cultivation of good fruit, when no measures are resorted to to obviate the fatal ravages of this detestable and insidious foe, and the remedy now suggested, is by no means expensive, if we take into consideration the advantages otherwise resulting to the trees from its application.

Any good soil, taken from the open fields or cultivated lands, may be used as a substitute for compost, and a very small quantity will suffice. Even if no fresh matter is applied, I would recommend the removal of the surface soil, and would replace it when convenient. Chip manure, or old dung, covered with straw, after the manner recommended by Gurney, answers well for the purpose. Bensalem, April 24, 1858.

Inflammation of the Lungs.

This is by no means an unfrequent disease among sheep. It is caused by cold and wet pasture-chills after hard driving-washing before shearing, when the water is at too low a temperature—shearing when the weather is too chilly and wet, and other circumstances of a similar description. Its first indication is that of fever-hard and quick pulse-disinclination for food-ceasing to chew the cud -unwillingness to move-slight heaving of the flanks, and a frequent and painful cough. The disease soon assumes a more aggravated form, but farther description is useless; it is sufficient for the farmer to know the first stages of the malady, and then pursue the course of treatment which experience determines as best.—Treatment—Bleed and purge freely, and secure the sheep in some comfortable place, free from all exposure to the vicissitudes of the weather. Let no irritating food be given.

MILKING Young Cows .- It is said that young cows, the first year they give milk, may be made, with careful milking and good keeping, to give milk almost any length of time deemed desirable; but that if they are allowed to dry up early in the fall, they will, if they have a calf at the same season, dry up at the same time each succeeding year, and nothing but extra feed will prevent it, and nothing but extra feed will prevent it, and that but for a short time.

D. P. GWINS.

"A crop of clover is worth a great deal more for manure to plow it under than it is to feed it to stock. Every animal eating a ton of clover keeps back a large portion of it in bone and muscle, and converts much of it into carbonic acid gas, all of which would otherwise be retained in the soil. From this we conclude that one of the best modes of enriching a soil is to plow in green crops, especially clover. It should be done when the clover is ripe, as it is worth more at that time. It saves barns, carting and re-carting and keeps the soil in a healthy condition, very much like new soil. If you let the clover ripen, the ground will be so plentifully filled with seed that it will not need re-stocking. We glorify men who build expensive barns and cellars in which to save manure, when we should glorify the man who has no barn at all." So says a New York farmer.

FEEDING HORSES.—The following facts from a gentleman of Buffalo, N. Y., who seems to be familiar with the facts, may be valuable, in a general sense :-

"The towing of boats on the Erie canal is done in part by horses that are taken along with the boats, and partly by towing companies who keep their horses at stations about twelve miles apart along the whole length of the canal. There are three of these towing companies, and they employ about 1400 horses. They have found, after great experience, that the most economical and best feed for their horses is a mixture composed of equal parts, by measure, of corn meal and and mill feed (bran or shorts weighing about twenty pounds to the bushel,) mixed up wet with cut hay, and they accordingly feed this altogether."

BLACK TEETH IN PIGS .- As many of our farmers are not aware of the disease that destroys at least one-eighth of the young, I will give a description of the disease and of the cure. Symptons-The hair stands out, with a slight cough, lank in appearance, and do not eat well; as the cough increases, they grow stupid, have the scours, and die in fits. grow stupid, have the seours, and die in fits.

Cure—Catch the pig, and you will find just back of the tusks a small black tooth (similar to the wolf-tooth in the horse,) set in the jaw.

Take a hammer and a punch, and break the take the latest the latest take take the latest take the tooth loose, and with a pair of nippers take out the tooth or teeth; and if the tusks are black, break them off also, and give the pig a little sulphur with his feed .-- Cor. N. Y.

GRASS AROUND FRUIT TREES .- No one who has the least knowledge of the cultivation of fruit, will allow grass to grow around his young trees. It is a great drawback upon their growth and health. For several years, at least—and we would recommend it all times—the soil should be kept pulverized around the trunks of fruit trees. Only give your trees as much attention as you give your cornfield, or your cabbage bed, and fording a freer medium for the expansion and there will be no secret in the raising of sudevelopment of the roots, is of great value in perior crops of good fruit-Ger. Telegraph.

(REATEST DISCOVERY OF THE 1MPORTANT TO TOBACCO CHEWERS!! DR. GUSTAV LINNARU'S
Tuste Restorative Trockes, the Great Substitute

for Tobacco. It is a well known and incontrovertable fact that the use of Tobacco is the promoting cause of many of the most severe MENTAL AND PHYSICAL DISORDERS to which the race of man is subject, as careful analysis and long and painful experience have clearly proven that it contains certain narcotic and poisonous properties most daugerous in their effects, which by entering into the blood derange the functions and operations of the Heart, causing many

to suppose that organ to be seriously deceased.

TOBACCO affects also the entire nervous system, manifesting itself—as all who have used the noxious weed will bear testimony—in Lassitude, Nervous Irritability, Water Brash, Dyspepsia, and many other disorders of a similar

THE TASTE RESTORATIVE TROCHES are designed to counteract these baneful influences, and have proved com-pletely successful in a multitude of cases, and wherever used. Being harmless in themselves they exert a benefiused. Being harmless in themselves they exert a beneficial effect upon the entire system, restoring the taste which has become vifiated or destroyed by great indulgence, completely removing the irritation and accompanying tickling sensation of the Throat—which are always consequent upon abstaining from the use of Tobacco, and by giving a healthy tone to the Stomach, invigorate the whole system. Persons who are irretrievably undermining their constitutions and shortening their lives, should use these Troches immediately and throw off the injurious and unpleasant habit of Tabacco Chuwing. pleasant habit of Tobacco Chewing.

These Troches or Lozenges are put up in a convenient and portable form at the low price of 50 Cents per Box.—

December 30, 1857. No. 54 Gold street, New York. TETHE NEW YORK STEAM SAW-MILL AND MACHINE COMPANY.
CAPITAL, TWO HUNDRED AND FIFTY THOUSAND DOLLARS.
This company has been organized with the above capital

for the purpose of supplying the demand for the COMBINATION PORTABLE STEAM SAW-MILL.

other establishment.

The Combination Saw-Mill was patented October, 1856, and is now generally acknowledged to be the cheapest, and most practical, and efficient lumber manufacturing machine in the world. A number of them are in successful operation in different sections of the country. Canada. Cuba, and South America, and wherever their merits have been tested they are being adopted by lumber manufacturers in preference to all other mills.

The following letter expresses the general opinion of those who are using the Combination Mill:

Messars. Emerson & Co.—Gentlemen: I have tried the saw-mill purchased of you, and will say that it performs

MESSES, EMERSON & CO.—Gentlemen: I have tried the saw-mill purchased of you, and will say that it performs well, and more than meets my expectations. I am well pleased with its performance. I set it up on a small stream that afforded constant water about as thick as my little furger, which was much more than sufficient to supply the boiler. We are able to cut 3,000 feet of beautiful lumber in 12 hours, with something less than one cord of wood.—It is the very thing we have so much needed in our-county for a long time. With a little trouble and expense, we are able to may a it from five to ten miles per day, and set if my able to move it from five to ten miles per day, and set it up in the heart of the timber, which saves the great burde of hauling the logs a long distance to the mill.

Yours respectfully,

JESSE KERR, Jr.,

The company has purchased Lund's Patent Feed Arrangement, which is illustrated and described in the Scien-tific American for October 24. This adds greatly to the efficiency of the mill. THE COMBINATION MILL,

with all the recent improvements, and steam power of 15 horses, is capable of sawing from 3,000 to 4,000 feet in 12 hours, and is sold for \$1,650.

THE NEW YORK CIRCULAR SAW-MILL

ITHE NEW YORK CHRCELAR SAW-MILL
Is manufactured only by this company. It is of superior
contruction, and sold for 25 per cent. less than other mills
of no greater capacity. A mill with 36 to 54-inch saw can
be sold for \$150 to \$500, and with a 20-horse engine and
believed for \$150 to \$100. oiler is sold for \$2.200.

Steam Engines and Boilers; Engines of from 1 to 100

steam Engines and Botters; Engines of from 1 to 100 horse power: Locomotive, Tabular, Flue and Cylinder Boilers furnished at greatly reduced prices from former Drawings, with plans and specifications for buildings

Drawings, with pians and specifications for bindings and machinery, furnished gratis to our customers.

Competent mechanics are sent out to put up and set in operation our machinery, when required.

We also manufacture Shingle Machines, Planing Machines, Sugar-Mills, and Machinery in general. hines, Sugar-Mills, and Machinery in general.

Special attention paid to getting up Shafting and Pullies or manufactories, and all kinds of mill-wright work.

This company are selling in great numbers a Patent Colical Burr. Stone Mill, for flour, corn meal, and all kinds of feed, which is pronounced by experienced millers, both in this country and Europe, the best mill ever constructed. It will grind more grain in the same time, and with half the power, of any mill of the same price in the market.

We also furnish other styles of Grist-Mills, when requied.

Gold Finger Rings 371% cts to \$50; Watch Glasses, plain

WM. LEWIS. Hantingdon, Agent for Huntingdon county This improved Patent Fell makes a Chear, Durable and Perfectly Waterproof Roofing, for Churches, Chaples, PUBLIC HALLS, RAILROAD STATIONS, HOUSES, COTTAGES, VLR-ANDAHS, FARM BUILDINGS, CATTLE and SHEEF SHEDS, and every other description of BUILDINGS, in lieu of Tin, Zinc, Shingles, Tiles, Thatch. &c. It costs only a fraction of a Tin or Shingle Roof and is

nore durable, as it neither composes, cracks nor leaks. It is made of the strongest and most durable materials, nd saturated with the best of Asphalte.

It is made up in Rolls, 25 yards long, 32 inches wide. and can be easily applied by any unpracticed person, with

few tacks. It is invaluable for Lining the Walls of Wooden Houses, ranaries, Banns, &c., as rats or other vermin and insects It is Impervious to wer, and being a non-conductor, counteracts the heat of SUMMER and the cold of WINTER, To the Agriculturist, it makes a chear and effectual

ROOFING, for FARM BUILDINGS and SHEDS; a COVERING for CORN and HAY HICKS, also a DEFENCE for Sheep during snow, and in the Yard as a loose covering for Turnips and other Fodder in Winter-the use of this FELT proves a great annual saving to the Farmer. It is suitable to every climate.
It is light and portable, being in Rolls, and not liable to amage in transportation.

When used under Tin or other Roofing, it forms a smooth body for the metal to lie tightly on, whereby the Tin wears much longer, not corroding beneath; at the same time DEADENING SOUND. Also being a NON-CONDUCTOR, it

PROOF, prevents the Roof from LEAKING. ASSVILLE SEMINARY. ONLY \$19 50 PER QUARTER.
