## for the farmer.

Winter Care of Poultry.

[From the Country Gentleman.] We do not wish the readers of this article to infer from the heading, that the suggestions contained in it do not also apply to summer as well as winter, but only that in almost all latitudes, poultry require, in many important respects, much more attention in winter than at other seasons of the year. And perhaps the most important of all these, next to providing them with a suitable house, is a regular supply of animal matter. That it is indispensible to their health, and to their constant production of eggs, no one of much experience in this matter will deny. Every one will tell you that your fowls must have necess to substance containing lime, from which to elaborate shells for their eggs, but hardly any one seems to think whence the elements of which the eggs themselves are composed, are to come. These must be furnished in the food, and therefore we must inquire what kind of food is suited to this purpose. The chief constitutent of both the do not hold the shoe as well. Stone floors, white and volk of the egg, is an organized well put down, will last an age, whereas wood substance called albumen; and nitrogen is one of the chief constituents of albumen .-Therefore, it is plain, that if you want your hens to lay, you must feed them on substances containing nitrogen. The flesh and blood of animals are almost identical with albumen and contain a considerable amount of nitrogen. But corn, and such other grains as can be economically fed to poultry, do not contain much nitrogen, though they contain the elements necessary for the production of fat. Oats have a much larger proportion of nitrogen than corn, and at the ordinary relative proportion of prices, are the more economical of the two. Poultry may be fattened on substances which do not contain a particle of nitrogen, as starch, sugar, and the fat itself of other animals, but they will not continue to lay. It is not therefore the fat, but the muscle and the blood, liver, the scraps which remain after trying lard, and tallow, &c., which are best adapted for food for hens; and of which little given every day or two, when they cannot pick up insects and worms for themselves, will abundantly repay you in their increased production of eggs. Those scraps from the table which are often given to prolong the existence of some ugly raw-boned, snarling, sheep-stealing cur, would suffice for as many hens as ought to take the place of the aforesaid dog.

old mortar, burned bones and oysters shells will furnish it-of course unslacked lime must not be given them. They are particularly partial to oyster-shell lime, probably because it may have a little flavor of the salt water; and we would here observe that while | sink into it. For cows, four feet is sufficient | salt itself is injurious to poultry, scraps of salt for the level. If the floor is of the right de- around them two, three or more wrappings meat and fish are much relished by them, and after some observation and inquiry, we ven- inches, it will tend much to keep the animals prevent the ingress of insects. If this be ture to say, productive of no bad results. Bones partly converted into charcoal and pounded fine, furnish both lime and nutriment. Such bones as can be easily mashed with a hammer as they come from the table, furnish a larger amount of oily matter than one who has never tried the experiment would suppose, while the fragments themselves, which the fowls will eagerly devour, contsin phrosphate of try it: lime, the very thing that they need. Red peppers, onions, cabbage, and celery leaves, chopped up, are all excellent articles of veg- or butter, as no pie can be good with a soleetable diet which fowls greatly need in winter as a change from their dry food. We do not advocate much feeding of warm and soft food, except an occasional change of boiled potatoes (at something under a dollar a bushel.) because the digestive organs of fowls are half of the butter into the flour, fine; mix it not adapted to soft food. Corn may be parched, and its nutritive qualities thus much increased, and if corn meal is fed it can be mixed up with water, or with mashed potatoes, and then bake it in rough cakes. Nor do we approve the plan of giving the fowls access to as much grain as they want at all times; they will be sure to suffer more or less, like some other bipeds, from a gluttony un-

restrained by moral principle. And we have another objection to these labor-saving machines for feeding and watering fowls, which is that they will be neglected in three cups water, four eggs, one teaspoonful other respects. Instead of visiting your fowls alspice, one teaspoonful cinnamon, one tearegularly to see what they need and what is spoonful nutmeg. We add raisins to the their condition, you will fall into the very above, and brandy is also said to be a good bad habit of leaving them to themselves, ta- addition. This is sufficient for four pies, king it for granted, that because they have and comes nearer a mince pie than anything water and grain, they are doing well enough. | we have ever tasted. When people take it for granted things are right, that is generally the time they are going wrong. Feed your fowls regularly, and take time to do it, not throwing the corn down in | crackers. a heap for them to snatch up in two minutes, but scatter it as much as possible a little at a time. Our own experience agrees with that | they have been boiled, to make a gravy; put of most poultry breeders whom we have known, that an average of one gill of corn a and butter. Make a rich pie crust and put day, half in the morning and half at night, it into a dish; boil six eggs hard, and cut with such scraps as may be thrown to them at | them into the chicken; fill the dish and cover noon, is sufficient to keep fowls in a good lay- with a crust. ing condition. And though we have spoken of oats as containing more nitrogen than corn, we prefer corn, (if meat is occasionally given,) as the rule, and oats as the exception, chiefly because the fowls, themselves, seem to prefer it. One writer, in the same breath, condemns corn as heating and producing

which some persons never think of providing, an excellent pie. One lemon will make two poultry will not thrive. Shallow earthen pies. pans or those scooped out of stone, are better than wood; cast iron ones we prefer as beef, till tender; when cold, chop it fine. more durable, and the rust taken up by the | Chop three pounds of clear beef suet, and water is rather an advantage to the fowls.— A few drops of assafcetida, kept in solution in of salt. Pare, core and chop fine, six pounds a vial, poured occasionally into their water is of good apples; stone four pounds of raisins of great benefit, both as a stimulant and a and chop them; wash and dry two pounds of prophylactic. In the above suggestions, in- currants, and mix them well with the meat tended solely for the inexperienced, we have endeavored to adhere to such principles of mon, a powdered nutmeg, a little mace, a simplicity and economy as will make them few cloves pounded, and a quart of white easily available by all.

Cobble Stone for Floors.

From a communication, by Gen. R. Harmon, of Wheatland, in the New York Chronicle, we extract the following:

Farmers would find it much to their interest to pave the floors of their horse-stables, their cow and wagon houses, and their hogpens, with small stones. For horses, stone floors are more favorable than wood, as when a dish, or roll into dumplings, and bake a fine standing on wood, their hoofs become dry and brown. hard, and are more liable to break, while they soon decays, and many a fine horse has been lost thereby. Some farmers may conceive that a stone floor is hard to build and keep in order, but this is not the case. I have stable floors that have been down thirty years, which are now as good as when laid, and hog-pen floors that have been down twenty years, and in spite of the hog's rooting, they have not raised one stone. Yet these floors were not put down by a professed paver-I laid them with my own hands.

The stones used in paving, should be from four to ten inches in length. Before laying them, get the ground into the shape you wish the floor, and cover it with three inches of sand. Commence laying the stones on the side under which the manger or trough is to be, going through with one course, and then following with another. If the stones are not round, they should be set on the smallest end with a little slant, and in laying the larger ones, scoop out the sand so that the top of the stones are even.

After having finished laying, go over the cover them with fine sand, and after this be- made into a liniment, and that many others other till every crevice is completely filled .- by the same: Thus you will have a floor that will last as

long as any man may desire. For horses the floor should begin to drop on five feet from where their fore feet stand. and a gutter should be formed so as to carry offall liquids. If the floor is well laid, it will soon become so tight that liquids will not scent, and the gutters are dropped four or five of unbroken paper, in such a manner, as to dry and clean.

## The Youscheeper.

The following, we copy from the "Household Recipt Book," of the Editor of the without danger. No need of camphor, tobac-Lewistown Gazette. The California pie, to co, &c. our taste, comes fully up to the mince pie-

[In making pies, it is absolutely necessary to have good flour, and use either sweet lard leather crust.

Puff Paste for Pies or Tarts .- To one pound of flour, take three-fourths of a pound of butter and the white of an egg; rub the egg, after it is frothed, into the flour; rub it up to a light paste; do not work it much; then roll it out several times; spread it with

PASTE FOR PIES .- To one half-pound of sifted flour, take three-quarters of a pound of butter, washed; this will make two small

LEMON PIES.—One cup sugar, one cup bread crumbs, one egg, two cups water, one easpoon tartaric acid; mix together.

CALIFORNIA PIES .- One cup sugar, one cup molasses, one cup vinegar, one cup flour,

LEMON PIES .- Quarter of a pound of buttor melted, one pound white sugar, beat four eggs, two grated lemons, and two grated

CHICKEN PIE. Parboil and cut up two young chickens; take the water in which into it pepper and salt, a thickness of flour,

LEMON PIE.—Three lemons, one teacup of water, one teacup of sugar, two tablespoonsful of flour; grate the outside of the lemon, carefully, and squeeze the juice out of the rest; mix all together.

A CHEAP AND GOOD PIE .- Press the juice of a lemon into two cups of molasses, grate only fat; and meat as unsuited to fowls, evidently overlooking the distinction between a layer of crust, spread over some of the mix
J. BRICKER'S MAMMOTH STORE. layer of the mixture, and over that lay a top Without a constant supply of fresh water, crust; bake thoroughly and you will have

MINCE PIE.-Boil three pounds of lean mix the meat, sprinkling in a tablespoonful Season with a spoonful of powdered cinnasugar; add one quart of Madeira wine and one-half pound of citron, cut into small bits. If put in a jar, closely covered, it will keep

THE CURATE'S PUDDING .- To one pound of mashed potatoes, while hot, add four ounces of suct, and two ounces of flour, a little salt and as much milk as will give it the consistency of common suet pudding. Put it into

or boiling water, pure unbolted wheat meal. stir with a stick or spoon as it cools, knead a little with the hands, make it into biscuit or rolls: rub them over well with dry flour: prick with a fork; bake in a hot oven, or cook with hot steam. This bread should begin to cook with a brisk heat.

The principle by which this bread is raised, is the expansion of the vapor and air in the dough by the sudden application of heat, so that a brisk oven is necessary to form a thin crust, and prevent the expanding particles of air from escaping.

Sweet Rolls .- Mix about a fourth part corn meal, with the dry flour to shorten it, then dissolve sugar and molasses in water enough to wet the whole, make into rolls, bake in a quick oven.

CRISPED POTATOES .- Boil potatoes till about half cooked, then peel and bake or crisp them in a hot oven. This saves much waste, and is superior to the ordinary way of baking without peeling them.

RHEUMATISM.—The Editor of the Somerset whole surface with a mallet, pounding the Telegraph, at Skowhegan, says he has a stones down until they are so solid that they | friend who has been cured of a severe attack will no longer yield to the mallet. Then of rheumatism, by the following ingredients comes dry, sweep it from one side to the have been wholly cured or greatly relieved

1 oz. Oil Cedar,

Gum Camphor, 3 " Laudanum,

2 " Aqua Ammonia,

1 pt. Alcohol, Mix well together and bathe by the fire.

KEEPING FURS .- Roll the furs, of any description, into compact, close bundles, and wrap properly done, they may be put where most convenient, in a dark place or in a light one, in a tight drawer or on an open shelf, and they may be left undisturbed until wanted, whether that be six months or six years,

THE GREAT BEAUTIFIER

FOUND AT LAST! For it restores permanently gray hair to its original color; covers luxuriantly the bald head; removes all dandruff, itching and all scrofula, scald head and all eruptions; makes the hair soft, healthy, and glossy; and will preserve it to any imaginable age, removes, as if by magic, all blotches, &c., from the face, and cures all neuralgia and nervous head ache. See circular and the following.

DOVER, N. H., Feb. 2d, 1857. DOVER, N. H., Feb. 2d, 1857.

PROF. O. J. WOOD & CO.—Genus: Within a few days we have received so many orders and calls for Prof. O. J. Wood's Hair Restorative, that to-day we were compelled to send to Boston for a quantity, (the 6 dozen you forwarded all being sold,) while we might order a quantity from you. Every bottle we have sold seems to have produced three or four new customers; and the approbation, and patronage it receives from the most substantial and worthy citizens of our vicinity, fully convince us that it is A MOST VALUABLE PREPARATION.

Send us as soon as may be one gross of \$1 size; and one

Send us as soon as may be one gross of \$1 size; and one dozen \$2 size; add believe us yours very respectfully.

(Signed,)

DANIEL LATHROP & Co. RICKORY GROVE, St. Charles Co., Mo., November 19, 1856.

Prof. O. J. Wood—Dear Sir: Some time last summer we were induced to use some of your Hair Restorative, and its effects were so wonderful, we feel it our duty to you and the afflicted, to report it.

Our little son's head for some time had been perfectly covered with sores, and some called it scald head. The hair almost entirely came off in consequence, when a friend, seeing his sufferings, advised us to use your Restorative; we did so with little hope of success, but, to our surprise, and that of all our friends, a very few applications removed the disease entirely, and a new and luxuriant crop of hair soon started out, and we can now say

riant crop of bair soon started out, and we can now say that our boy has as healthy a scalp, and as luxuriant a crop of hair as any other child. We can, therefore, and do hereby recommend your Restorative, as a perfect remedy for all diseases of the scalp and hair.

We are, yours respectfully,
GEORGE W. HIGGINBOTHAM,
SARAH A. HIGGINBOTHAM,

GARDINER, Maine, June 22, 1855. Prof. O. J. Wood—Dear Sir: I have used two bottles of Professor Wood's Hair Restorative, and can truly say it is the greatest discovery of the age for restoring and changing the Hair. Before using it I was a man of seventy. My Hair has now attained its original color. You can recommend it to the world without the least fear, as my case was one of the worst kind.

my case was one of the worst kind. Yours respectfully,

DANIEL N. MURPHY.
