A HINT TO SMOKERS .- M. Melsens, a French chemist, has found that tobacco form different proportions. In tobacco from some parts of France there is 7.96 per cent of nicotine ; whilst Havana tobacco contains only 2 per cent. He proposes to smekers a way of preserving them from the effects of the alkaloid, by putting into the tube of the pipe or eigar holder a little bale of cotton, impregnated with citric and tannic, acids. As the smoke passes through the cotton, it will denosit tha nicotine therein, in the shape of tannate and citrate.
