To open the doors of the car would impetus to the flames. But the heat and smoke were already stifling and something must be done immediately or he must perish.

Opening one of the doors he wheeled one of the iron safes to the edge of knowing or caring about the earth's dimenthe car and let it fall. It was struck by the steps of the baggage car, producing such a concussion as to alarm its occupants. Rightly conjecturing that something was wrong, the engineer was signalled and the train soon came to a stop. The cause of the alarm was soon discovered, the messenger being found leaning as far as possible out of the car to escape the smoke. Every appliance at command was speedily brought into requisition, and be fire was fortunately extinguished. The safe was picked up and the train resumed its journey, arriving at its journey without further accident. The amount of loss is not known, but it is thought it will not be very large. The fire is supposed to have originated from a spark from engine.—Cleveland Herald, 4th.
