HUNTING DON, PA For the Farmer.

Potatoes, a century ago, were not cultivated to any extent in Britain. In Scotland, many of the good folks declared that, as potatoes were not mentioned in the Bible, it was a good and sufficient reason why they should not be cultivated. But a scarcity of grain and the good qualities of the potato were two powerful arguments in favor of this esculent, and prejudice and superstition were overcome.

Tuberoses should be placed in warm room, during winter, where the temperature is seldom below 45°, for when the bulbs are kept in a cool place the center or undeveloped flower stem is very liable to decay, although the outside of the bulb will remain

sound. Farmers should not throw away genuine Lovering and other Syrups. their potato stalks. The stems and New Orleans and other Baking Mo leaves of the potate are very valuable lasses. for manure.

Lettuce and spinach can be raised nearly a month earlier by planting the seeds late in the autumn, and covering them an inch. The early frosts will not injure them.

Water in which potatoes have been boiled possesses a poison fatal to lice. Wash the cattle freely, and as their hides dry, comb them with a currycomb.

Fallen leaves contain not only the vegetable matter, but the earthy salts, lime, potash, etc., needed for the next season's growth and fertility, and that too exactly in the proportion required by the very tree and plant from which they fall. Save them.

Points in Sheep.—An English au thority gives the following description of the points a South-down sheet should present:

"The neck should be of medium length, thin toward the head, but enlarging toward the shoulders, where it should be broad and high, and straight in its whole course above and below thest wide, deep, and projecting be tween the fore-legs, indicating a good constitution and a disposition to thrive: the shoulders on a level with the back and not too wide above, but bowing outward from the top to the breast, leaving room for the springing rib be hind; the ribs coming out horizontally from the spine, extending far back, ward, and the last rib projecting more than the others; the back flat from the shoulders to the setting on of the tail; the loin broad and flat, the rump long and broad, the hips wide; the space between them and the last rib on either side as narrow as possible; and or pound. Cheaper for the same qualthe ribs presenting a circular form like ity than elsewhere.
