[From The N. Y. Tribune.]

WHAT I KNOW OF FARMING.

BY HORACE GREELEY.

XXXIX.

SCIENCE IN AGRICULTURE.

I am not a scientific farmer; it is not probable that I ever shall be. I have no such knowledge of Chemistry and Geology as any man needs to make him a thoroughly good farmer. I am quite aware that men have raised good crops—a good many of them—who knew nothing of science, and did not consider any acquaintances with it conducive to efficiency or success in their vocation. I have no doubt that men will continue to grow such crops, and to make money by agriculture, who hardly know what is meant by Chemistry or Geology; and yet I feel sure that, as the years roll by, science will more and more be recognized and accepted as the true, substantial base of efficient and profitable cultivation. Let me here give briefly the grounds of this conviction:

Every plant is composed of elements whereof a very small portion is drawn from the soil, while the ampler residue so long as the plant continues green and growing, is mainly water, though a variable and often considerable proportion is imbibed or absorbed from the atmosphere, which is understood to yield freely nearly all the elements required of it, provided the plants are otherwise in healthful and thrifty condition. Water is supplied from the sky, or from springs and steeams; and little more than the most ordinary capacity for observation is required to determine when it is present in sufficient quantity, when in baleful excess. But who, unaided by science, can decide whether the soil does or does not contain the elements requisite to the luxuriant growth and perfect development of wheat, or fruit, or grass, or beets, or apples? Who knows, save as he blindly infers from results, what mineral ingredients of this or that crop are deficient in a given field, and what are present in excess? And how shall any one be enlightened and assured on the point, unless by the aid of Science?

I have bought and applied to my farm some two thousand bushels of lime, and ten or a dozen tuns of plaster; and I infer, from what seemed to be results, that each of these minerals has been applied with profit; but I do not know it. The increased product which I have attributed to one or both of these elements may have had a very different origin and impulse. I only grope my way in darkness, when I should clearly and surely see.

An agricultural essayist in Maine has recently put forth a canon which, if well grounded, is of great value to farmers. He asserts that the growth of acid plants like sorrel, dock, &c., in a field results from sourness in the soil, and that where it exists Lime—that is, the ordinary Carbonate of Lime—is urgently required; whereas the application of plaster or gypsum (Sulphate of Lime) to that field must be useless and wasteful. If such be the truth, a knowledge of it would be worth millions of dollars to our farmers. But I lack the scientific attainment needed to qualify me for passing judgment thereon.

There is great diversity of opinion among farmers with regard to the value of Swamp Muck. One has applied it his land to good purpose; so he holds Muck, if convenient, the cheapest and best fertilizer a farmer can add to his ordinary barn-yard manure; another has applied cords upon cords of Muck, and says he has derived therefrom no benefit whatever.—Now, this contrariety of conclusion may result from the condition precedent to the diverse soil; one of them requiring what Muck could supply, while the other required something very different from that; or it may be accounted for by the fact that the Muck applied in one case was of superior quality, and in the other good for nothing. Where muck is composed almost wholly of the leaves of forest trees which, through thousands of years, have been blown into a bog, or shallow pond, and there been gradually transformed into a fine black dust or earth, I do not see how it can possibly be applied to an upland, especially a sandy or gravelly soil, without conducting the subsequent production of bounteous crops. True, it may be sour when first drawn from the stagnant pool or bog in which it has lain so long, and may need to be mixed with lime, or salt, or ashes, and subjected to the action of the sun and frost, to ripen and sweeten it. But it seems to me impossible that such muck should be applied to almost any reasonably dry land, without improving its consistency and increasing its fertility. But all muck is not the product of decayed forest leaves; and that which was formed of coarse, rank weeds and brakes, of rotten wood and flags, or skunk cabbage, may be of very inferior quality, so as hardly to repay the cost of digging and applying it. Science will yet enable us to fix, at least approximately, the value of deposit of Muck, and so as to give a preference to the best.

The analysis of soils, whereof much was heard and whence much was hoped a few years since, seems to have fallen into utter discredit, so that every would-be popular writer gives it a passing fling or kick. That any analysis yet made was and is worthless, I can readily concede, without shaking in the least my conviction that soils will be analyzed, under the guidance of a truer, profounder Science, to the signal enlightenment and profit of their cultivators Here is a retired merchant, banker, doctor, or lawyer, who has bought a spacious and naturally fertile but worn-out, run-down farm, on which he proposes to spend the remainder of his days. Of course, he must improve and enrich it; but with what? and how? All the manure he finds, or, for the present, can make on it, will hardly put the first acre in high condition, while he grows old and is unwilling to wait forever. He is able and ready to buy fertilizers, and does buy right and left, without knowing whether his land needs lime, or phosphate, or potash, or something very different from either. Say he purchases $2,000 worth of one or more of these fertilizers. It is highly probable that $1,500 might have served him better if invested in due proportion in just what his lands most urgently needs; and I unflinchingly believe that we shall have an analysis of soils that will tell him just what fertilizers he ought to apply, and what quantity of each of them.

Science has already taught us that every load of Hay or Grain drawn from a field abstracts therefrom a considerable quantity of certain minerals, say: Potash, Lime, Soda, Magnesia, Chlorine, Silica, Phosphorous, and that the soil is thereby impoverished until they be replaced, in some form or other. As no deposit in a bank was ever so large that continual drafts would not ultimately exhaust it, so no soil was ever so rich that taking crop after crop from it annually, yet giving nothing back, would not render it fertile or worthless. Sun and rain and wind will do their part in the work of renovation; but all of them together cannot restore to the soil the mineral elements whereof each crop takes a portion, and which, being once completely exhausted, can only be replaced at a heavy cost. Science teaches us to foresee and prevent such exhaustion—in part by a rotation of crops, and in part by a constant replacement of the minerals annually borne away; the subtraction being greater in proportion as the crop is more exacting and luxuriant.

What I know of science as applicable to farming is little indeed; but I know that there is such science, and that each succeeding year enlarges, improves, and perfects it. I know that I should thus far have farmed to far better purpose, if I had been master even of so much science as already exists; and I am confident that the good farmers of the next generation will fertilize and till their lands at less cost and to better purpose by the aid of that Agricultural Science which the years just before us will rapidly and constantly develop.

ADDRESS

TO THE

NERVOUS AND DEBILITATED.

WHOSE SUFFERINGS HAVE BEEN PROTRACTED

FROM HIDDEN CAUSES, AND WHOSE

CASES REQUIRE

PROMPT TREATMENT.

TO RENDER EXISTENCE DESIRABLE

If you are suffering, or have suffered, from involuntary discharges, what effect does it produce upon your general health? Do you feel weak, debilitated, easily tired? Does a little extra exertion produce palpitation of the heart? Does your liver, or urine organs, or your kidneys, get out of order? Is your urine sometimes thick, milky or flocky, or is it ropy on settling? Or does a thick skum rise to the top? Or is a sediment at the bottom after it has stood awhile? Do you have spells of short breathing or dyspepsia? Are your bowels constipated? Do you have spells of fainting, or rushes of blood to the head? Is your memory impaired? Is your mind constantly dwelling on this subject? Do you feel dull, listless, moping, tired of company, of life? Do you wish to be left alone, to get away from everybody? Does any little thing make you start or jump? Is your sleep broken or restless? Is the lustre of your eye as bright? Do you enjoy yourself in society as well? Do you pursue your business with the same energy? Do you feel as much confidence in yourself? Are your spirits dull and flagging, given to fits of melancholy? If so, do not lay it to your liver or dyspepsia. Have you restless nights? Your back weak, your knees weak, and have but little appetite, and you attribute this to dyspepsia or liver complaint?

Now, reader, self-abuse, venereal diseases badly cured, and sexual excesses, are all capable of producing a weakness of the generative organs. The organs of generation, when in perfect health, make the man. Did you ever think that those bold, defiant, energetic, persevering, successful business men are always those whose organs are in perfect health? You never hear such men complain of being melancholy, of nervousness, of palpitation of the heart. They are never afraid they cannot succeed in business; they don't become sad and discouraged, they are always polite and pleasant in company of ladies, and look you and them right in the face—none of your downcast looks or any other meanness about them. I do not mean those who keep the organs inflated by running to excess. These will not only ruin their constitution, but those they do business with or for.

How many men, from badly cured diseases, from the effects of self abuse and excesses, have brought about that state of weakness in these organs that has reduced the general system so much as to induce almost every other disease—idiocy, lunacy, paralysis, spinal affections, suicide, and almost every form of disease humanity is heir to—and the real cause of the trouble scarcely ever suspected, and have doctored for all but the right one.

DISEASES OF THESE ORGANS REQUIRE THE USE

OF A

DIURETIC.

HELMBOLD'S

FLUID EXTRACT

BUCHU

Is the Great Diuretic, and is a certain cure for diseases of the

BLADDER, KIDNEYS, GRAVEL, DROPSY, ORGANIC WEAKNESS, FEMALE COMPLAINTS, GENERAL DEBILITY,

And all diseases of the Urinary Organs, whether existing in Male or Female, from whatever cause originating, and no matter of how long standing.

COUGHS, SORE THROAT, ETC

No medicine or treatment can excel the powerful curative power of

DR. SIMMS'

WHITE PULMONIC BALSAM.

It cures with a rapidity unequalled by any other remedy offered for throat and lung diseases. It is recommended by over 2,000 persons in Wilmington, and hundreds in Philadelphia, Baltimore and other cities and communities throughout the country. Mr. Pennington, of Wilmington, Illinois, writes that there is not (with a few exceptions) a family in that city who will be without it if possible to procure it. Such is its popularity wherever it is known—and this popularity arises from the fact that it universally cures all who use it. There is no case of

COUGHS, COLDS, SORE THROAT,

ASTHMA, BRONCHITIS, CROUP,

BLOOD SPITTING, HOARSENESS, and even Pulmonary Consumption, where the system is not broken down with the wear of the disease, or pretended medicine, or inexperienced advice, that this Balsam will not cure if carefully used according to directions. We guarantee it all we represent it be, and invite a trial from the afflicted everywhere. Price 50 cts., medium size, and $1 for large size bottles. Prepared only by

J. H. SIMMS, M. D,

Practical Organic Chemist,

No. 707 Market St.,

WILMINGTON, DEL.

Philadelphia depot, Johnston, Holloway & Cowden, 602 Arch Street.

Baltimore depot, S. S. Hance, 108 Baltimore Street.

For sale by Medicine Dealers generally.

June 14 1870. 1y.

LADIES' FANCY FURS,

John Fareira,

718 Arch Street,

Middle of the Block, between 7th and 8th St., south side PHILADELPHIA, Importer, Manufacturer and dealer in all kinds & quality of

Fancy Furs,

for LADIES' and CHILDREN'S WEAR.

Having enlarged, remodeled and improved my old and favorably known fur emporium, and having imported a very large and splendid assortment of all the different kinds of Furs from first hands, in Europe, and have had them made up by the most skillful workmen, I would respectfully invite my friends of Huntingdon and adjacent counties, to call and examine my very large and beautiful assortment of Fancy Furs, for Ladies and Children. I am determined to sell at as low prices as any other respectable house in the city. All Furs Warranted. No misrepresentations to effect sales.

JOHN FAREIRA,

718 ARCH Street, above 7th, South side,

PHILADELPHIA.

HUNTINGDON, PA.

SOLDIERS' HEIRS, ATTENTION!

The act of Congress approved March 2, 1867, gives to Heirs of Soldiers who died prisoners of war,

COMMUTATION FOR RATIONS,

for the time the soldier was so held a prisoner, at the rate of twenty-five cents per day, to be paid in the following order: 1st. To the widow, if unmarried; 2d. To the children; 3d. To the parents, to both jointly if they are living; if either is dead, to the survivor; 4th. To the brothers and sisters.

The act of February 28, 1867, provides for the refunding of the $300 Commutation Money, where the same person was again drafted, and was required to enter the service or furnish a substitute.

DISCHARGED SOLDIERS.

The act of March 2, 1867, also makes provisions for the payment of the

$100 ADDITIONAL BOUNTY

to such soldiers as have accidentally lost their discharges.

All persons having any claims under any of the above mentioned Acts, or any other kind of claim against the United States or State Governments, can have them promptly collected, by addressing the undersigned. Information and advice cheerfully given to soldiers or their friends, free of charge.
