A few years ago, wool commanded a high price. Farmers all rushed into the sheep business, following in that respect the sheep themselves, who always jump a fence collectively, or as nearly as possible. In time, the price of wool declined and then the sheep were very suddenly converted into mutton, and there seemed to be a desire on the part of farmers to exterminate sheep from the face of the earth. Many farmers probably sell out almost to the last hoof and horn. Such farmers will, inside of another year or two, most certainly regret the step. This is as certain as it is that the people are not going to stop eating pork and beef.

Our theory is that year by year it always pays to raise all the leading products of the fram. Thus the cow often declines, from this single cause; for, as it is oblided to eat a great deal to support life, and as the smoothness of the teeth makes the difficulty of chewing great, a sufficient quantity of food cannot be supplied to the stomach. Thus the poor animal sinks in the midst of plenty, and every year grows leaner and leaner till it dies. The horns are another and surer method of determining the animal's age. At three years old, a very slight external shell coating falls off the places where the horns are about rising. At four years of age the cow has small, pointed, neat, smooth horns, thickest near the head; at five the horns become larger, and are marked VOX JUBILANT Many Crizzens of this county who, had been persuaded to buy other kinds of Sewing Machines, which seemed at first to work well on a tolerable range of work, have expressed to me their regrets that the genuine original Elias Howe Sewing Machine—the best in the world—had not been brought to their notice before purchasing.
